being to criticize their letters also and of ultimately writing the best of them all. Bell discovered that more than 80 per cent of all the communications of rival houses mailed to prospective customers were inferior to the kind he knew he could turn out if he had the chance; whereupon he was greatly encouraged to study the game harder and play it faster to a splendid finish. Looking over his job to find the best opportunities he spied the one that looked most promising and secretly made ready to grasp the same.

It happened that a very important sales letter was written each year at a certain time before the rush season to several thousand old and new customers—and the time for the mailing of this letter was only a few weeks off. Bell had a clear idea of the wrong methods previously used in the composition of the letter and also of the right methods that should be used. For his own satisfaction he worked out an ideal letter, then filed it away in the hope that a sudden turn of fortune would provide the chance to use it. The very day before this letter was to be dictated, the man who was supposed to do the dictating was called out of town unexpectedly, and as the only person to see him leave the office was young Bell, all matters for immediate attention would naturally be left in Bell's hands. But the chief had forgotten the big letter for tomorrow! A sudden thought flashed across the boy's mind, then was overtaken by a daring resolve. He took the letter he had written himself, verified it with a big O. K. at the bottom over his initials, and started the regular machinery to run the letter thru and send it out broadcast—the official document of the firm! He knew that if the letter failed, his professional career was done for. Happily his chief was to be gone a couple of weeks, and if the letter won out there was a chance that the profit to the company might argue in favor of letting Bell keep his job. So he plugged along, trying to look as unconcerned as possible.

The blow fell at the worst time. Bell was in the large mailing room where dozens of clerks were assembled when a boy brought the message: "The president wishes to see you."

The president was a gruff old codger. He held up the letter, already too familiar to Bell, and snapped, "Did you write that?" Bell merely nodded—his voice had suddenly fled. "Well, you're fired!" the president said. "This company has been founded for two generations, and we never before had to deal with such a gross violation of discipline. I wish you to explain the matter fully to the board of directors now meeting in the room adjoining." The president rose. A flood of new courage surged over Bell—here was a chance for the real man in him to explain a man's deed to a roomful of real men waiting to hear all about it. Once more Bell saw his chance and seized it.

While he knew he had been technically wrong, he felt he had been morally right. So he told the directors the why and how of everything. He took from his pocket a copy of the letter used the year before and a copy of the one he had composed. He had marked the dissimilar passages and points in the two letters a few days before, and was prepared to show why the letter he had written was scientifically correct while the other was not. He asked to be told what results his letter had brought and how they

compared with the letter of the year before. He said he was more interested in proving a principle than in holding a job.

"Young man," said the president, "we wanted to see if your character as shown by this interview was as strong and clear as your mind as shown by that letter. Your letter has brought us \$18,000 worth of new business already and we estimate the final total will be over \$30,000. We had to discharge you to maintain proper discipline. But we offer you, starting next week, the position of correspondence manager of the company at a salary of \$100 a week. Also we desire you to coach the younger employees in the best ways to prepare themselves for promotion by effective spare time reading along modern lines."

OF course the name of the young man here mentioned is fictitious, but the main points are true, and they illustrate a mighty principle and procedure in business training that no man with belief in his own future can afford to neglect. The books on business correspondence that this young man bought and mastered did not cost him over \$30. The net profits to the company from a single letter produced by study of these books were in the neighborhood of \$3000. The young man's investment in a business library was repaid a hundred times over in the first year. Also he was jumped over the heads of scores of clerks who had been much longer with the company, and was given a salary over three times what he had drawn before.

While this example is unusual, both in speed and in extent of a young man's rise to the top of his profession because of mastering the right kind of books, every line of professional, commercial or industrial activity holds opportunities of a like nature to the man able to recognize and take advantage of them. And to supply the books necessary for this personal training, every concern large enough to employ a stenographer and an office boy should create and conduct for itself a business library, following or adapting the methods now used by the largest railroads, banks, stores, offices, and factories.

The science of business now demands that every worker know his particular line as well as a college professor knows his. Lack of study is evidence of stagnation. Every man must grow to equal the size of his job, or every man's job must grow to equal the size of the man; either development proceeds from the heart of the best vocational, industrial, commercial, technical, psychological and philosophical books, which ought to be in every business organization so recent, abundant, convenient, that every official or employee who wants to know specifically how to handle himself, his job and his future may have close at hand a modern book to help him solve each problem. The nearest public library is never near enough a business concern to make that concern rise above the others in character, prosperity and usefulness; it must have its own library for its own use.

The National City Bank of New York is one of the five largest banking institutions of the United States, and was the prime organizer of the new international American banking corporation founded to promote the extension of American industry thruout the world. Whatever this bank does commands the attention of the great financiers. A huge working library is one of its main features. Classes are held for all grades of employees, from its office boys to its postgraduate college men. All the principles and [Continued on page 227]

An examination of this record may awaken you to the value of time recording devices in your business

With this dependable check writer on your desk you have the means of securing your account against raised checks

Independent, The  
118 West 40th Street  
New York, N. Y.

When and how are your letters sorted? Have you an efficient system or have you a wearisome accumulation?

Do your pay schedules change often? How much time is lost figuring your payrolls?

You can always suit your special needs if you make your own typed guides (celluloid protected) for letter files

This machine automatically prints starting, finishing and elapsed time on one or more jobs on one card—and cares for overtime and Saturday rates

This machine will count cards and get from them any desired totals by groups or sub-groups, totalling from two to five sets of data by only one operation

Could you train yourself to a little systematic arrangement of your own papers—and keep your desk well cleared?

Write to the Business Consulting Service, The Independent, for names and addresses of these manufacturers.

important economy of time and space—12,000 visible index cards in metal cabinet 40" long and 25" wide. Ready for use at cabinet or carried to your desk

# NEWS OF EFFICIENCY

We are using standard 8½x11 sheets. When in use they are folded lengthwise into a sheet 4½x11 and laid on the desk as a time card. The horizontal rule across the top reserves a place for the user's initials, the date and our firm name. Directly under this, at the left, is printed in a column, the arbitrary division of time units for the working day, probably covered in most cases by the hours from 8 to 6. After ex-

8:00  
12  
24  
36  
48  
9:00

It will be seen that the hour is really divided into tenths, by using the space between the figures to represent 8:06, 8:18, etc. Note that the figures at the right, 2, 4, 6 and 8 are the tenths of hours shown.

A pencil mark drawn off to the right from any given time followed by another drawn from a later time, indicates the time spent on any one client. In this office each client has an account number and we use the number instead of the client's name.

The other distributions of time, such as Sundry, Administration, Promotion and Personal, are simply written in.

At the close of the day the time card is signed, and any important memoranda are entered on the reverse side.

Each day the cards go to the time clerk who uses the columns on the right hand side to segregate and sum up each client's time. After being entered in the time book, these sheets are put in a binder for per-

manent filing. With this system we have a complete, permanent record of all of the time of each member of the staff. It is really working out more than satisfactorily.

ALLEN BRETT.

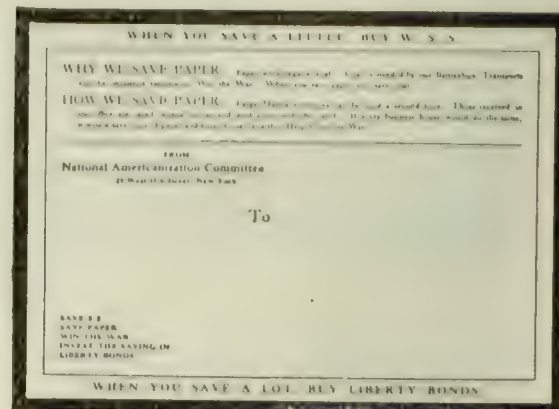

## VALUABLE SCRAPS OF PAPER

**N**EARLY every business house mails a certain amount of printed matter in large, unsealed envelopes, and receives a large amount of such material daily in similar envelopes. In order to save expense and delay the paper-saving label at the right was designed by the National Americanization Committee, which may be copied by any firm that cares to make such a saving. The label, 6 by 8½ inches, is to be pasted over the face of large envelopes which come unsealed in the mail. The label covers the old written address and the printed return address, making the envelope, if of good stock, useful for a second trip in the mail bag.

The National Association of Purchasing Agents and the National Retail Hardware Association urge that all catalogs and similar printed matter sent to them for preservation be made  $7\frac{1}{2} \times 10\frac{5}{8}$  or its half size,  $5\frac{1}{2} \times 7\frac{1}{2}$ , saddle stitched, so that it may be opened up flat for filing. This size has been concurred in by the United Typothetæ of America as being the most economical size to print, all things considered, and by the National Association of Brass Manufacturers, as a standard for their members, and single sheets may be folded any way desired, the only idea being that they be so made that they may be brought to  $7\frac{1}{2} \times 10\frac{5}{8}$  for filing.

THE war has emphasized the fact that modern highways transportation problems demand modern treatment, hence the extension of the program of the Highways Transport Committee, Council of National Defense.

The war has taught the nation that prob-

lems affecting its interests must be looked at from the wider viewpoint, just as the the question of highways transportation suggests streams of commodities following natural lines of distribution, usually from one state to another.

With highways transportation inalienably linked up with the question of commerce, and with commerce today knowing no boundaries, the work of the Highways Transport Committee, taking in the mutual interests of groups of states rather than of one state, or of one locality alone, has been established along regional lines.

Further, expedition in shipment, which the Highways Transport Committee is daily emphasizing in its assistance to the Railroad Administration by diverting short hauls from rail lines to the highways, is becoming more and more vital.

The eleven Highways Transport Regions into which the United States has been divided are indicated in the map below. The chairmen appointed to supervise the work in each of these districts are:

Region No. 1, J. Randolph Coolidge, Jr., Boston; Region No. 2, George H. Pride, New York City; Region No. 3, C. A. Musselman, Philadelphia; Region No. 4, Tom Winn, Atlanta; Region No. 5, Harry L. Gordon, Cincinnati; Region No. 6, John T. Stockton, Chicago; Region No. 7, Earle Brown, Minneapolis; Region No. 8, J. F. Witt, Dallas; Region No. 9, Tom Botterill, Denver; Region No. 10, Julius L. Meier, Portland; Region No. 11, L. A. Nares, Fresno.

# Taking the Guesswork Out of Efficiency Service

## A Message to Skeptical Business Men

**D**ON'T deprive yourself, your employes and your country of the benefits of higher efficiency simply because some kind of "efficiency service" did not prove satisfactory in your plant.

*Efficiency means competency!* Therefore "efficiency service" which does not prove competent is not *true* efficiency service.

## L. V. Estes, Incorporated

### Offer a Supervised Service of Forty Specialists

It is neither fair to you nor to the profession of industrial engineering to limit your efficiency possibilities to one-man or few-men efforts.

No matter how competent the individual engineer employed, he has his human limitations. A guess here, an experiment there, or an overlooked opportunity somewhere else may reduce your benefits from "efficiency service" thousands of dollars annually.

Estes service protects you against these contingencies. With a staff of more than forty senior engineers specializing in various branches of efficiency work, the Estes Company is able to give *exactly* the kind of help you need—and *all* the help you need.

Working in close co-operation with each engineer is a traveling district supervisor who keeps every job in direct contact with the vast store of statistics and powerful resources of Estes headquarters.

**Free Booklet:** A copy of the new edition of "Higher Efficiency" will be sent to executives who request it over their signatures. Please mention which of these departments is of most interest to you:  
*Factory Efficiency—Industrial Accounting—Office Efficiency*

**LV·ESTES INCORPORATED**  
"RAISE WAGES WHILE CUTTING COSTS"

*Industrial Engineers*

1827 McCormick Building, Chicago

### A Trade Marked Service

A trade mark is a badge of self-respect—a guarantee by the organization behind it to maintain a definite quality standard.

This emblem, marking the industrial engineering service of L. V. Estes, Incorporated, pledges to all clients a service consistent with the Estes reputation for leadership.

# ESTES SERVICE

# BETTER HIGHWAY TRANSPORTATION

SOMETHING over half of the seven billion dollars spent annually in this country for the transportation of freight goes to defray cartage over the highways including city streets. On the other hand in work actually done, that is figuring on a ton mile basis, the railroads greatly exceed the highways. This variance in efficiency is accentuated by the fact that the ton mile cost of railroad freight transportation is approximately two-thirds of a cent, while in highway cartage it ranges from about twenty cents to as high as a dollar and sixty cents for New York City. Unfortunately in the latter case there is no way of striking an average, which would better serve the comparison. Furthermore, in the past fifty years, the ton mile cost of railroad freight transportation in this country has been steadily reduced from three cents to two-thirds of one cent, while the cost of highway transportation has increased.

These facts and figures indicate the deplorable situation existing in the field of highway transportation, one might almost describe it as a state of chaos. The reasons are largely fundamental and may be expressed as lack of organization and of ordinary, common sense efficiency. In the one item of waste mileage alone, that is running vehicles half the time empty or with less than load capacity, there is an opportunity, by adopting railroad methods, of reducing this country's annual cartage cost by about one half. This means a saving of over a billion and a half dollars each year, which would more than pay the interest charges on the national indebtedness incurred by our participation in the war. It would also represent a saving of twelve and a half dollars each year for every one of our 120,000,000 population. It is therefore a matter of real concern to the public at large.

The advent of the motor truck might have been expected to have exerted an influence in reducing highway transportation costs, but up to the time the latest available statistics were to be had, some eighteen months ago, they were not used in sufficient numbers to make an appreciable difference. In the widespread use of this modern transport agent, however, lies the principle opportunity of materially reducing the nation's annual cartage bill. Their numbers are increasing rapidly (the recently announced total for the United States of 400,000 is misleading because it includes the motor wagon types, i. e., converted passenger cars and light delivery vehicles), but in the application and operation of motor trucks the existing inefficient methods of highway transportation are being generally followed. Consequently the present costs of motor truck haulage can be materially lowered. Those prevailing during the past few months thruout the Eastern states for intercity haulage, were something less than the twenty cents per ton mile generally charged. In comparing this with railroad freight rates it must be remembered that the motor trucks usually carry directly from shipper to consignee, while in the case of railroads there is generally street cartage at both ends not included in the rail-

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

road rate. For city work a five ton motor truck can be profitably operated on a charge of thirty dollars per day. Allowing forty miles with full load the ton mile cost, or, rather, charge, would be twelve cents. Such conditions, however, are now the exception rather than the rule.

Highway transportation, of course, antedates the railroad by centuries, and its development might be expected to be more perfect. This is especially so when we remember that the first attempt to utilize mechanical power in transportation work was on the highways, and when it was found that the cumbersome steam vehicles shook themselves to pieces on the rough roads, two smooth parallel rails were provided and the railroad was born. The plan of the initial builders of railroads was to operate them as toll roads, just as the best highways of those days were owned and used. In other words individuals and businesses would own and run their own locomotive power and rolling stock on the new railroads. The great railroad systems of this country today, their remarkable development and success, result from the fact that this initial plan did not prevail; that, to the contrary, railroad transportation was made a separate business, placed in charge of specialists, and developed as comprehensive systems of large scope, instead of as innumerable small and disassociated units. Meanwhile highway transportation continues in the same old "toll road" rut, altho the toll road itself has given way to the public owned and maintained highway.

The chief attempt to date to introduce efficiency into highway transportation is the plan prepared by Interstate Commerce Commissioner Harlan and sponsored by the Railroad Administration at Washington, which provides for a "store door" delivery of freight in lower Manhattan, New York City. This was described in detail by the writer in the issue of *The Independent* appearing the third week of last August, together with the official announcement that it would be inaugurated that month. As a matter of fact it is still in the planning state and the prospects none too bright for its reality, altho another date, December 1 next, has now been set for its inaugural. There are many who expect to see this one immediate hope of improvement dropt altogether with the end of the war. If it had been able to produce any worthwhile results the scheme of return load bureaus, adopted last spring by the Highway Transport

Committee of the Council of National Defense and described at that time in *The Independent*, could be mentioned as another step in the right direction. This plan was applicable to the field of intercity motor truck haulage, and while it succeeded in listing considerable cargo space, it failed altogether in the matter of securing "return loads," which, as the name suggests, was its real function.

The solution of the highway transportation problem, which means among other advantages the cutting in half at least of the nation's abnormal cartage expense, is to be found in adopting the fundamental principles which have brought real success in the railroad field. With extensive systems of coöperating trucking organizations and practises and methods of modern railroading could be followed. Freight would be carried to and from railroad and steamship terminals, under arrangement with the water and rail carriers, and thus shippers and consignees would have the same service as they already enjoy in the case of express shipments and from the United States mails, the additional charge being but a fraction of what individual cartage now costs. On short hauls, which would range from twenty to a hundred miles or so, the shipments would be handled entirely by motor truck thus affording an additional saving in time. Idle mileage and waste tonnage, i. e., running vehicles empty or with less than capacity load, would then be largely eliminated. For example, an investigation in New York City last spring showed that vehicles running on its streets carried loads averaging only twenty-five per cent of their load capacity. Increasing this average to even fifty per cent would reduce by one-half the number of vehicles needed to handle the city's requirements, and at the same time eliminate its heavy traffic congestion. The latter is necessary in order to permit motor trucks to operate with something like real efficiency in this and many other cities. With a free flowing traffic and little or no delays at loading and unloading platforms motor trucks will rapidly supplant horse drawn vehicles. Municipal officials are forever planning and inaugurating new traffic regulations, widening streets, etc., when the solution of the traffic congestion really lies in the reorganization of street transportation. The existing efforts entail heavy expenses to the taxpayers, while the proper solution will bring also greatly reduced transportation costs for the benefit of every one.

A better plan, which may be criticized as Utopian, would call for a single gigantic national organization, to accomplish for highway transportation what the American

Telephone and Telegraph Company has done for the transmission of messages. This would be going the railroads one better, and idealistic as it may seem, one hardly dares set a limit on what the economic developments of the future may lead to. At any rate there is no denying the imperative need for improved methods in highway transportation, and for a substitution of motor trucks for horse drawn vehicles.

*A truck used for intercity haulage in Connecticut*

# The Secret of Being a Convincing Talker

How I Learned It in One Evening

By GEORGE RAYMOND

"HAVE you heard the news about Frank Jordan?"

This question quickly brought me to the little group which had gathered in the center of the office. Jordan and I had started with the Great Eastern Machinery Co., within a month of each other, four years ago. A year ago Jordan was taken into the accounting division and I was sent out as salesman. Neither of us was blessed with an unusual degree of brilliancy, but we "got by" in our new jobs well enough to hold them.

Imagine my amazement, then, when I heard:

"Jordan's just been made Treasurer of the Company!"

I could hardly believe my ears. But there was the "Notice to Employees" on the bulletin board, telling about Jordan's good fortune.

Now I knew that Jordan was a capable fellow, quiet, and unassuming, but I never would have picked him for any such sudden rise. I knew too that the Treasurer of the Great Eastern had to be a big man, and I wondered how in the world Jordan landed the place.

The first chance I got, I walked into Jordan's new office, and after congratulating him warmly, I asked him to let me "in" on the details of how he jumped ahead so quickly. His story is so intensely interesting that I am going to repeat it as closely as I remember:

"I'll tell you just how it happened, George, because you may pick up a pointer or two that will help you.

"You remember how scared I used to be whenever I had to talk to the chief? You remember how you used to tell me that every time I opened my mouth I put my foot into it, meaning of course that every time I spoke I got into trouble? You remember when Ralph Sinton left to take charge of the

Western office and I was asked to present him with the loving cup the boys gave him, how flustered I was and how I couldn't say a word because there were people around? You remember how confused I used to be every time I met new people? I couldn't say what I wanted to say when I wanted to say it; and I determined that if there was any possible chance to learn how to talk I was going to do it.

"The first thing I did was to buy a number of books on public speaking, but they seemed to be meant for those who wanted to become orators, whereas what I wanted to learn was not only how to speak in public but how to speak to individuals under various conditions in business and social life.

"A few weeks later, just as I was about to give up hope of ever learning how to talk interestingly, I read an announcement stating that Dr. Frederick Houk Law of New York University had just completed a new course in business talking and public speaking entitled 'Mastery of Speech.' The course was offered on approval without money in advance, so since I had nothing whatever to lose by examining the lessons, I sent for them and in a few days they arrived. I glanced through the entire eight lessons, reading the headings and a few paragraphs here and there, and in about an hour the whole secret of effective speaking was opened to me.

"For example, I learned why I had always lacked confidence, why talking had always seemed something to be dreaded whereas it is really the simplest thing in the world to 'get up and talk.' I learned how to secure complete attention to what I was saying and how to make everything I said interesting, forceful and convincing. I learned the art of listening, the value of silence, and the power of brevity. Instead of being funny at the wrong time, I learned how and when to use humor with telling effect.

"But perhaps the most wonderful thing about the lessons were the actual examples of what things to say and when to say them to meet every condition. I found that there was a knack in making oral reports to my superiors. I found that there was a right way and a wrong way to present complaints, to give estimates, and to issue orders.

"I picked up some wonderful pointers about how to give my opinions, about how to answer complaints, about how to ask the bank for a loan, about how to ask for extensions. Another thing that struck me forcibly was that, instead of antagonizing people when I didn't agree with them, I learned how to bring them around to my way of thinking in the most pleasant sort of way. Then, of course, along with those lessons there were chapters on speaking before large audiences, how to find material for talking and speaking, how to talk to friends, how to talk to servants, and how to talk to children.

"Why, I got the secret the very first evening and it was only a short time before I was able to apply all of the principles and found that my words were beginning to have an almost magical effect upon everybody to whom I spoke. It seemed that I got things done instantly, where formerly, as you know, what I said went 'in one ear and out the other.' I began to acquire an

executive ability that surprised me. I smoothed out difficulties like a true diplomat. In my talks with the chief I spoke clearly, simply, convincingly. Then came my first promotion since I entered the accounting department. I was given the job of answering complaints, and I made good. From that I was given the job of making collections. When Mr. Buckley joined the Officers' Training Camp, I was made Treasurer. Between you and me, George, my salary is now \$7500 a year and I expect it will be more from the first of the year.

"And I want to tell you sincerely, that I attribute my success solely to the fact that I learned how to talk to people."

\*\*\*\*\*

When Jordan finished, I asked him for the address of the publishers of Dr. Law's Course and he gave it to me. I sent for it and found it to be exactly as he had stated. After studying the eight simple lessons I began to sell to people who had previously refused to listen to me at all. After four months of record breaking sales during the dull season of the year, I received a wire from the chief asking me to return to the home office. We had quite a long talk in which I explained how I was able to break sales records—and I was appointed Sales Manager at almost twice my former salary. I know that there was nothing in me that had changed except that I had acquired the ability to talk where formerly I simply used "words without reason." I can never thank Jordan enough for telling me about Dr. Law's Course in Business Talking and Public Speaking. Jordan and I are both spending all our spare time making public speeches on war subjects and Jordan is being talked about now as Mayor of our little Town.

So confident is the Independent Corporation, publishers of "Mastery of Speech," Dr. Law's Course in Business Talking and Public Speaking, that once you have an opportunity to see in your own home how you can, in one hour, learn the secret of speaking and how you can apply the principles of effective speech under all conditions, that they are willing to send you the Course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete Course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the Course, send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

# THE NEW BOOKS

## An Unknown Russian

THE handsome centenary volume on the *Life and Works of Feodor Vladimir Larrovitch*, published by the Authors' Club, will come as a surprise even to those best informed on Russian literature. But altho the outside world knows nothing of Larrovitch, it seems the authors of the club know a great deal, for a dozen of them have contributed tributes, critiques and reminiscences to this volume. Professor Giddings introduces him in stately style in "A Prolegomenon to Larrovitch." W. G. Jordan tells us that he was born in the village of Tsubskaia in the Caucasus in 1817 and was banished to Lake Baikal in Siberia where he began his literary career. Richardson Wright explains "The True and False About Larrovitch," and Titus M. Coan tells of his "Talks with Larrovitch," whom it appears he knew intimately in Paris. We are even given samples of his prose and verse. The following is an extract from an unpublished letter:

We Russians have many saints, for it is given to us especially (I say this in all humility) to recognize, when we see them, those who may enter in thru the gates into the City. To be sure, their vogue rises and falls, some are forgotten, some revived. Those who survive the vagaries of Time—mark this!—are the men who helped shape Russian destinies by molding our national soul into something entirely different from that of any other people. They have invariably been of two classes—soldiers or monks: men of the type of Alexander Nevski, who stemmed the tide of the great invasion and with rare diplomacy turned Tatar vassalage into Muscovite independence, or men such as the monk Sergius who, a century later, labored to revitalize the national soul into a spirit strong, noble, and abiding.

In any nation the standard of a people's moral force is more truly reflected in the lives of its saints than its warriors. The warrior leader often disregards moral law when the grim necessities of war assert themselves. In the saint is crystallized that spiritual force which is the very foundation of law and political structure. The expedient standard of the warrior may "work," as we use the term, but the idealistic standard of the saint endures.

But mark this one great fact—the warrior who has saved a nation soon ceases to be a warrior and becomes a saint, his helmet takes on the adumbration of a halo. He becomes a savior of our Russian soul—our national soul, just as the religious saved our spiritual genus.

The translated poems which we owe to G. S. Hellman, read as well as tho they had been written in English instead of Russian, for instance these stirring lines:

### SIBERIAN MARCHING SONG

We march along the Moscow road,  
Five score adventurous men.  
The North Lights glitter in our eyes;  
A continent shall be our prize.  
Tho cold slays five—twice five!—why then,  
We march along the Moscow road,  
Four score brave men and ten.

We march along the Moscow road,  
Four score brave men and ten.  
Tobolsk is passed, Yakutsk is near.  
Ha! ice and snow, think you we fear?  
Take twice your toll, We pay it. Then  
We march along the Moscow road,  
Four score adventurous men.

We march along the Moscow road,  
Four score adventurous men.  
Tho crows shall flock to those that die,  
And we gnaw shoe-straps, you and I,  
And famine slays again, again  
We march along the Moscow road,  
A few adventurous men.

The reader's impression of the personality and actuality of this synthetic genius is confirmed by portraits of Larrovitch in youth and age, a page from "Crasny Baba" ("The Red Woman"), his first book, a picture of the room in which he died and a photograph of his shirt, icon and pen. De-

tailed bibliographical notes are appended by Arthur Colton, and, as we might expect, the volume closes with an appeal for funds for the foundation of a Larrovitch Fellowship. The Authors' Club deserves high praise for bringing into being a new Russian writer and endowing him with a library of fictitious works.

The critical reader of this book cannot question the right of Larrovitch to rank with such immortal authors as Ossian, Thomas Rowley, Diedrich Knickerbocker, Fray Agapida, Hippolyte Simon, Fiona Macleod and Patience Worth.

*Feodor Vladimir Larrovitch. An Appreciation of His Life and Works.* Published by the Authors' Club, New York. \$2.

## Beyond the Battle

THE END OF THE WAR, by Walter E. Weyl, is a vigorous plea for a peace settlement based neither on conquest nor compromise but on a reconstruction of the world on lines of internationalism. Many books have been written to the same general effect, but few of them will so well repay the reading because few writers on the war have either so keen an insight into its problems or so lucid a manner of explaining them. Even the reader who dissents most vigorously from some of Mr. Weyl's conclusions will find abundant food for thought on every page and feel that the time given to reading the book was less "spent" than invested.

Some readers may feel that the author is rather severe on the Entente Allies. Thus he contends that a satisfactory peace could have been obtained in the summer of 1917 had it not been for the imperialistic greed of some of the Allies:

The Allies revealed an inelasticity, an intolerance of the new Russian democracy and a thinly disguised desire for conquered territories that made diplomacy on a high level impossible. Rather than revise imperialistic war aims, they permitted Russia to go down, almost forced her to make a separate peace, and allowed Germany to break her up into a number of smaller states, easy to pit against one another. Italy's desire to gain hasty possession of coveted territory, and lack of unity among the Allies led to the Italian

defeat in the fall of 1917 and to a further strengthening of the autocratic and militaristic classes in Germany. Finally, by permitting, if not encouraging Japan to invade Siberia, in circumstances which indicated that the proposed intervention was to be a predatory attack, our allies set upon themselves the stamp of imperialism.

To these shortsighted actions and omissions of our allies the President of the United States has been steadfastly opposed. Repeatedly he has stood alone for the long-time policy based on principle, while statesmen in the Allied countries clamored for immediate ends, a profitable victory and a punitive peace.

But, however critical, even if unjustly critical, of the Entente peace program, the author is no advocate of the policy of surrender or even of a *status quo ante* peace. He emphasizes the danger of a victorious Germany and the still greater, because more probable, danger of a compromise peace which would give the Central Powers a free hand in what once was Russia. "German militarism" is not a catch phrase of the patriotic pamphleteer; it is a real threat to the future of the world:

Militarism had always been associated in our minds with autocracy, and that we had conceived as a weak-minded and hoary immigrant from an outlived age. . . . We no longer had any quarrel with kings and emperors, who had had their claws cut and had become gracious layers of cornerstones and innocent symbols of democratic power. Autocracy, we believed, would disappear gradually and in fractions, tail, body and head, like the Cheshire cat, until, as with British royalty, nothing remained but the smile.

The war taught us that autocracy was not a thing of kings and crown princes, but a living principle, an efficient form of social organization. Instead of dying decently at the first whiff of factory smoke, instead of being run over by the new railroads or crowded to death in our modern cities, it converted industrialism to its own uses and seated itself in the center of the economic system. It did not die of education, but made of the school teacher one of its main supports. The university and the newspaper became, not its executioners, but its servile handmaidens. Autocracy was efficient. It persisted in living. It persisted in growing. Therein lay its menace. It was expansive, necessarily expansive.

*The End of the War*, by Walter E. Weyl. Macmillan Co. \$2.

## With Three Armies

OF the countless war books, this is one of the few certain to live as an unofficial document of the World War. The author, Mr. Arthur Stanley Riggs, is especially qualified to write such a book. In addition to being a literary man, he is a great traveler and a student of history. With a background of knowledge and experience, he went to the western front; he visited the trenches of three armies—English, French and Belgian; he crost the devastated territory and saw the scars of Kaiserism; he looked into No Man's Land and finally he investigated the vast activities behind the lines. All that he saw and heard he presents to the people at home in a simple, straightforward way and save for the two concluding chapters, he does not attempt to philosophize about the war. His motive is to "bring the war home to the reader" and in that he succeeds admirably. His views and observations he calls merely those of an ordinarily intelligent layman, but the reader soon discovers that the ordinarily intelligent layman in question has quality of style and breadth of vision. The book is profusely illustrated with photographs of war scenes and war celebrities and reproductions of cartoons, posters and proclamations, including a facsimile of the

"Messboys weren't allowed shore leave" an incident from Julien Bryan's story of "Ambulance 46"

announcement of the execution of Edith Cavell signed by General von Bissing.

Thruout there are delightful passages like this:

Paris is still Paris. Nothing, apparently, can ever wholly transform the eternal spirit of youth that keeps this marvelous capital perennially fresh. True, her lights are dimmed, her wounds many and grievous, her shops are closed. Only a few of the many, to be sure, as one scans the long streets, but enough to give us a notion of what a war like this in the United States would mean, with fronts boarded up and quaint notices pasted for the information of customers. On one Parisian milliner's shuttered window is a neat sign: "Owner away. Studying German styles. Will reopen at the end of the war with a complete new line." Will he? is the thought that strikes every one after the gay, almost impudent humor of the notice has passed.

*With Three Armies*, by Arthur Stanley Riggs. Bobbs-Merrill Co. \$1.50.

## Ambulance 464

We of the American Ambulance Field Service have no desire to pose as heroes. I went over, as did so many of the others, with the object of seeing war at first hand and of getting some excitement, as well as being of some service. But having learned of some of the terrible things which had been done by the enemy and what the French people had gone thru, and having become imbued with some of the wonderful spirit of the French, our point of view was altered.

In the diary of his eight months in the service Julien H. Bryan, a seventeen year old boy who went to France because he was too young to go to college, tells an entertaining, rambling story of coercing a decrepit motor, exercising on the roof of his car, making hard, dangerous trips to bring in *blessés*, swanking about a bit in London and working his way home as mess boy on a transport. To read it is to share in the experiences Mr. Bryan recounts and to absorb as he did a deep, unspoken, action-impelling sympathy with the ideals for which France fought first.

*Ambulance 464*, by Julien H. Bryan. Macmillan Co. \$1.50.

## In the Reichstag

IN THE REICHSTAG, by the Alsatian Deputy Abbé E. Wetterle, is such an amazing revelation of the procedure, customs, and atmosphere of intrigue, that one feels a seat in it would entail perpetual bewilderment upon the holder. Imagine, as herein set forth, parties grouped in a sort of drill system, the voracious attacks of the deputies upon the refreshment tables at official receptions, the blandishments and shady tricks of the Government to win recalcitrant members—they nearly all appear to have their price to be repented of later—with the dominating impossible Kaiser ever in the background, and one does at least realize the complete impotency to which the Reichstag has been reduced.

*In the Reichstag*, by Abbé E. Wetterle. G. H. Doran Co.

## At Armageddon

I wish I could get it to our boys over in Uncle Sam's army, now, different this war is from other other wars. . . . Other wars—what did they matter? . . . But this—this matters! It's worth your life and mine, and every one's life. It's the war of the Kingdom.

Thus speaks one Lubin, an intellectual Jew, in Will Irwin's *A Reporter at Armageddon*. Likely it is merely a coincidence that the author's title fore shadows the two impressive chapters in which Lubin proclaims the Law of the Prophets as the foundation of democratic civilization, but the connection startles one when reading "The Voice of Israel" and "Of Sorrento." The Kingdom on earth, as defined by Lubin, is a confederation of nations to enforce that moral code of universal peace and righteousness delivered by the Hebrew prophets as the earliest pioneers of civilization. "Thou shalt not kill," etc., and which, under the banners of the Allies, does

# Your Dime Goes as Far as Her Dollar

Every dime you spend for Quaker Oats buys you 2,000 calories of food.

(The Calory is the energy unit used by the Government in its food comparisons.)

In other foods, at this writing, the cost of those 2,000 calories runs about as follows:

### Cost of 2,000 Calories

In Quaker Oats	-	-	\$ .10	In Halibut	-	-	-	\$1.06
In Round Steak	-	-	.82	In Canned Salmon	-	-	-	.66
In Leg of Lamb	-	-	.96	In Canned Corn	-	-	-	.60
In Veal Cutlets	-	-	1.14	In Canned Peas	-	-	-	1.08
In Salt Cod	-	-	1.56	In Potatoes	-	-	-	.26

So a dime's worth of Quaker Oats yields as many calories as a dollar's worth of meat foods, on the average.

Some foods run up to 15 times the Quaker Oats cost, measured on this basis.

But Quaker Oats means more than money-saving. It is better-balanced, more complete than meat foods. It is almost the ideal food.

With food cost where it is today, these facts should be considered. You can lessen that cost and live better by using more Quaker Oats.

# Quaker Oats

## The Extra-Flavorly Flakes

In Quaker Oats you get delightful flavor. It is flaked from queen grains only—just the rich, plump oats. We get but ten pounds from a bushel.

This extra flavor costs you no extra price. You should make sure to get it.

**Two Sizes: 12c to 13c—30c to 32c**

Except in the Far West and South

(2030)

## Six of Many Office Uses

- 1 3-in-One cleans and polishes desks, filing cabinets, all office furniture.
- 2 3-in-One lubricates typewriters just right. Saves repair-bills. Makes old machines run like new. Never gums or collects dirt.
- 3 3-in-One renews worn typewriter ribbons. Better than re-inking. Apply with tooth-brush. Allow oil to permeate ribbon.
- 4 3-in-One cleans the keys. Prevents rust or tarnish on the metal surfaces.
- 5 3-in-One stops squeaking of revolving chairs and stools.
- 6 3-in-One is the correct lubricant for adding machines and all calculating machines. Also polishes the case and prevents tarnish.

## 3-in-One The High Quality Oil for Offices and Banks

costs little—saves its price many times over. Keeps all delicate office mechanisms in smooth working order. Try it on typewriters, adding, calculating and billing machines, numbering and dating stamps, check-protecting devices. Best for time locks of vaults. Penetrates instantly to the bottom of the deepest bearing, lubricates perfectly, wears long.

3-in-One transforms old office furniture. Works out the grime of time—causes superficial scratches to disappear. No oily residue remains to show fingermarks and catch dust. 3-in-One polishes and prevents tarnish on the bright nickel and other metal parts of bank safes and vaults.

3-in-One Oil is sold at all good stores, east of Rocky Mountain states, in 50c, 25c and 15c bottles; also in 25c Handy Oil Cans.

**FREE** The 3-in-One Dictionary of Uses describes an infinite variety of needs for this pure, high-grade oil. On request we will gladly send you a copy—and a liberal sample of 3-in-One Oil—both free.

THREE-IN-ONE OIL COMPANY

165 U. M. Broadway, New York

today stand at Armageddon fighting against the German Beast of Ruthless Paganism. That Mr. Irwin's deservedly won host of readers should not conclude from the above that he has suddenly turned an abstruse philosopher, one hastens to add that his narrative of visits to Spain, France, Switzerland and Italy is as absorbingly interesting in a popular sense as his former war books.

*A Reporter at Armageddon*, by Will Irwin. D. Appleton & Co. \$1.50.

### The Battle of the Somme

AS a historian Sir Arthur Conan Doyle has improved conspicuously since his first volume of *A History of the Great War*. His present book, the third in sequence, is devoted almost entirely to what is now known as the First Battle of the Somme. Leading up to it are the actions from January to July, 1916, including a brief reference to the naval battle of Jutland. Of this stupendous conflict on the Somme, which the author details with praiseworthy fidelity and illuminating incidental touches, we have here an easily readable standard work of first quality. It is perhaps as well for us to bear in mind the repeatedly expressed opinion of the enemy as a fighter. Says an "experienced soldier":

There is one thing we have all learned and that is that the Hun is a jolly good soldier and engineer, so don't listen to any other nonsense. If you get hand to hand with him he gives in at once, but he practically never lets you get so close. As long as Fritz has a trench and a gun he will stick there till he is made crow's rations.

The second battle of the Somme has shown that Fritz once driven out of his trench into open fighting gives in by the thousand before the dash and never-let-up of our soldiers.

*A History of the Great War*, by Sir Arthur Conan Doyle. G. H. Doran Co. \$2.

### My Four Weeks in France

DON'T be misled by the similarity of titles. Ring W. Lardner's diary. *My Four Weeks in France*, is not a bit like Ambassador Gerard's chronicle, "My Four Years in Germany." In fact it is like no other book that has come back to us from the front. Mr. Lardner's viewpoint is incorrigibly funny, not even war's alarms can muffle his sense of humor; all along his route from "an Atlantic port" thru submarine zone to front line trenches and back again he discards as non-essential anything that may fail to produce a laugh. The result is an excellent antidote for an overdose of military strategy or discussion of the philosophy of war. Here is war as Mr. Lardner saw it:

Thursday, September 13. Paris.

Up early and to the garage. Delivered the tools. "Vous had better buy a tire pump," said my adviser.

"Je suppose," said I, "that I'll have to get an order from Papa Joffre."

"No," he said. "That's une chose vous can buy sans an order."

"Voulez-vous get to work on the car right away?"

"Ah, oui," says he. I asked my chauffeur to take me to a maison du tire pumps. We found one on the Champs Elysées. Other things for sale in the store were watches and perfumery. I proceeded thence to French General Headquarters.

Monsieur du License surprised me by asking for a picture and taking my description, which I could almost have rined by this time—

*Hair jet black, but a paucity of it;  
Forehead high as the Eiffel tower;  
Prominent nose, but it's mine, I love it;  
Eyes the brown of the pansy flower;  
Medium mouth, not the best for kisses;  
Chin as round as a billiard ball;  
Dark complexion—Oh, Master, this is  
Me, and I'm better than sea food too!*

"What est the numero of the engine?"

"Four hundred and fifty-six thousand three hundred and four," I replied sans batting an eyelash.

He took it down and disappeared into an ad-

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

joining room. In a little while he returned with a license plate—second-hand to match the car.

I carried it along to display to the man at G. H. Q., as it is technically known.

"Où can I get the tires?" I asked.

"Anywhere, with that order," he said.

So I told the driver to go anywhere, and he misunderstood and took me everywhere. The tire maison he chose was as far away as he could drive without crossing the Swiss border.

"Now back to the United States garage," said I, and we arrived just as they were closing.

My friend told me that the car had been "taken down." When I saw it I was convinced that the "taking down" had been accomplished with shrapnel.

"How many months will it take to put it together again?" I asked.

"Très few minutes," said the mechanic. "It will be all finished to-morrow midi."

"It looks all finished now."

"Avez-vous votre license?" he inquired.

I displayed it triumphantly.

"Ah, oui," he said. "But that's just the license for the car. Vous must aussi have a driver's license."

"Bonne nuit!" I yelled. "And what for?"

*My Four Weeks in France*, by Ring W. Lardner. Bobbs, Merrill & Co. \$1.25.

## Huts in Hell

**T**HERE is, in this little volume by Dr. Poling, associate president of the United Society of Christian Endeavor, more than the vivid, virile account of his experiences with our army on the western front. There is the answer to a question which in varied forms is being asked by many people in America today: "Exactly what does the Y. M. C. A. do for our boys over there? Vaguely we know—but particulars. . . .?"

It is just these particulars which Dr. Poling supplies. His is the gift of that genial and personal touch which lends reality to the recounted incident, and he has obtained his material first hand. Alone, he managed a front-line hut for three days; he talked with our soldiers before they went into battle and after they came out; he saw them in hospital, in billets, in the trenches, on leave; and as one who exposed himself with them to all the dangers of the line, he obtained an intimate knowledge of the attitude—and the gratitude!—of the men toward the Y. M. C. A.

In speaking of one of the huts, Dr. Poling says:

Home it is to these far-called soldiers of freedom who pay the sterner price of the world's redemption. It holds them to their yesterdays, it grips them to their pasts. In the atmosphere of its manly decency they breathe deeply and are purified. . . . We could not win this war without the Young Men's Christian Association; for, even tho' our armies reached Berlin, our souls would lose their way.

*Huts in Hell*, by Daniel A. Poling. Christian Endeavor World, Boston. \$1.35.

## Stories of Men at War

**W**E have much literature of the war but very little real literature. Anything about the war is interesting and the stories told by the average fighting man are no less gripping because they lack the intangible quality that we call literary style. It is a keen pleasure to find a book like *Gentlemen of Arms* which combines fidelity to facts and vividness of narrative with a rare gift for the phrase and the most discriminating sense of values.

This is war fiction—short stories in the best sense of the term—but based on actual experiences. Each one is striking, and the cumulative effect of the whole collection is unforgettable. Here is the atmosphere of the war, the psychology of the warriors. We get down under the skin of the fighting men and see their minds and souls laid bare. The big, live, moving events are here as in all stories of the war, but this first-hand knowledge of the human reactions is something which is seldom disclosed to us. These are human souls, not fighting machines, and their struggles and agonies, yes, and their triumphs, even their fun, make up a series of stories which ought to take their place among the per-

## War Service and System Service

**S**O many of our employees have left for the War, and so much of our factory space is devoted to government work that it is difficult to keep the Production of filing devices and supplies up with the increasing pace set by Demand.

We are, however, keeping intact our highly specialized sales representation, and diverting the full power of its energy and ability from sales-work into SYSTEM PLANNING SERVICE, for the Government and for Industry.

Without proper methods and equipment for keeping its records, Industry would be crippled within a period of weeks; the Government would meet untold difficulties in the conduct of the War.

Record Filing equipment and supplies are the foundation of business that is built to endure, and System Service is the architect. Y and E Equipment, Supplies and System Service are even greater necessities today than ever before.

For these reasons we are doing the utmost to overcome Production difficulties, and will also maintain our System-Planning Service—at our own expense, as always—for the periods of the War and the Reconstruction.

We welcome inquiries about methods thought best for handling any system of record-keeping. Write us (fully), or inquire of our local representatives. Address on request.

RED GUM DIV., AMERICAN HARDWOOD MFRS. ASS'N. 1828 Bank of Commerce Bldg. MEMPHIS, TENN.

manent literature of the war, so poignant and so vital are they.

*Gentlemen at Arms*, by "Centurion." Doubleday, Page & Co. \$1.40.

### The Destroyers Make Good

**I**F you are proud of our navy, or if you want to be, read James B. Connolly's colorful account of *The U-Boat Hunters* in the Atlantic war zone and in the North Sea. Mr. Connolly crossed on one of our troopships and later cruised on an American destroyer off the English coast. His descriptions are eloquent of the vigorous action and hard work that sea service demands, and of the high achievement with which it recompenses. Interesting anecdotes of flotilla humor enliven Mr. Connolly's book; there is a noteworthy chapter on The Navy as a career.

*The U-Boat Hunters*, by James B. Connolly. Charles Scribner's Sons. \$1.50.

### The Turks at War

**C**APTAIN GEORGE A. SCHREINER, the author of *From Berlin to Bagdad*, is seemingly both an American citizen and a former officer in the Boer War. He gives us an account of personal observations of Turkey in wartime, and a view of the Gallipoli campaign from the enemy side. After reading his book we cannot escape the conviction that he would have been better advised at this time to parade less his privileged intimacy with high German and Turkish officers, and display more recognition of the bravery with which the French and British fought the unfortunate Gallipoli campaign.

*From Berlin to Bagdad*, by George A. Schreiner. Harper & Bros. \$2.

### Germany Her Own Judge

**T**HIS scholarly research into state papers, shows Germany condemned not only by her own action but by her own word.

The author, born in Russia, educated in Switzerland, choosing Germany as his home—"as it was thoroly sympathetic to me in many respects, not least politically"—correctly defines himself as a cosmopolitan, and his collection of facts, coming from an evident student of European history, makes *Germany Her Own Judge* an extensive but carefully written treatise of superlative value.

It reminds one of Dr. Church's answer to the German professors, except that it goes deeper and is of course a later work. Possibly few Americans have taken the trouble to read the full text of the Belgian state papers, because before the war Germany made public only such parts of these papers as would not condemn Suter-Lerch. by means of quoting fully the state papers of the belligerents, places the noose where it is best fitting for a German hanging.

*Germany Her Own Judge* by H. J. Suter-Lerch. Houghton-Mifflin Co., Boston. 50 cents.

### War Books of Many Sorts

**SOUS LES ARMS**, by Marcel Morand. (Henry Holt & Co.) A collection of descriptive articles on various phases of the war written in simple French. Contains explanatory notes and vocabulary.

**A GENERAL'S LETTERS TO HIS SON** (Houghton, Mifflin Co., \$1.) Excellently given advice from an older to a younger officer, that applies not only to military life. Well worth reading by everybody.

**PRESENT DAY WARFARE**, by Jacques Rouvier. (Charles Scribner's Sons, \$1.35.) A most interesting commentary and description of war as it is fought today. Not tactics for the officer, but facts for the layman.

**THE FLAME THAT IS FRANCE**, by Henry Malherbe. (Century Co., \$1.) With exquisite and finished art the author presents delicate portraits, brief musings, clear-cut incidents of battle. This book, which won the Goncourt prize

for 1917, is at the same time the most personal and the most impersonal that has come to us hot from the fighting zone.

**KNIGHTS OF THE AIR**, by Bennett A. Molter. (Appleton & Co., \$1.50.) As interesting to the lay reader as it should be of value to the aviation student.

**THE SPY ON THE SUBMARINE**, by Com. Thomas D. Parker, U. S. N. (W. A. Wilde Co., Chicago.) A story with genuine nautical quality, and much of instructive value.

**THE BLACK WATCH**, by Joe Cassels, Scout. (Doubleday, Page & Co., \$1.25.) Another account of the first months of the war by a member of the Black Watch who was in the retreat from Mons.

**A VILLAGE IN PICARDY**, by Ruth Gaines. (E. P. Dutton & Co., \$1.50) The story of the Smith College Relief Unit's work with the peasants in devastated France—a picturesque tale of one of war's bypaths.

**FINDING THEMSELVES**, by Julia C. Stimson. (Macmillan Co., \$1.25.) Intimate family letters by the American chief nurse of a Base Hospital Unit in France, written during America's first year at war.

**BACK FROM HELL**, by S. C. Benson. (A. C. McClurg & Co., \$1.30.) A former church minister and ardent pacifist, who is now a volunteer American soldier, tells of the German reign of terror he witnessed in Belgium.

**THE WAR DOG**, by Edward Peple. (E. P. Dutton & Co., 50 cents.) "The grit of a dog who was unafraid" is the subject of this slim volume of appealing verse, written to help the Red Cross, and dedicated to "any good dog, and all of them."

**FIGHTING THE BOCHE UNDER GROUND**, by Captain H. D. Trounce. (Charles Scribner's Sons, \$1.50.) Vivid, first-hand account of mine constructing and firing under No-Man's-Land. Rich with tales of a hitherto little recognized phase of war-time heroism.

**OUT OF THE JAWS OF HUNLAND**, by McMullen and Evans. (G. P. Putnam, \$1.50.) Apart from the thrill of adventure in the escapes of Ally prisoners from Germany, this picture of Germany's internal condition convinces one that the lot of the German people is one of overwhelming hardship.

**GENSERIC, KING OF THE VANDALS AND FIRST PRUSSIAN KAISER**, by Poultney Bigelow. (G. H. Putnam, \$1.50.) The story of Genseric's conquest of the Roman Empire, interpreted in the light of recent events in the history of the modern Vandals and their king.

**THE VANDAL OF EUROPE**, by Wilhelm Muhlon. (G. P. Putnam, \$1.50.) The reading public is now familiar with Dr. Muhlon's sensational revelations of the mental attitude of those in Germany's high places before and after the outbreak of war. His diary printed serially is now published in book form.

**COLETTE BAUDOCHE: THE STORY OF A YOUNG GIRL OF METZ**, by Maurice Barrés; translated by Frances Wilson Huard. (George H. Doran Co., \$1.50.) A before-the-war analysis of Franco-Prussian antagonism, translated into human terms, with the purpose of revealing the loyalty of Lorraine to France.

## For the Business Library

**MERCHANDISING**, by Archer Wall Douglas. (Macmillan Co., \$1.) Absorbingly interesting, packed with useful information, and written with so engaging a manner as to give life and actual charm to what many would consider the dry details of business. The last chapter, "The Human Equation," is itself well worth the price of the book.

**THE SELECTION AND TRAINING OF THE BUSINESS EXECUTIVE**, by Enoch Burton Gowin. (Macmillan Co., \$1.50.) Deals with the problem of producing executives having the desirable natural characteristics cultivated and perfected by satisfactory training; a study of successful methods in use in many large corporations, together with the views of prominent business men and students of business psychology.

**THE LAW OF COMMERCIAL PAPER**, by William Underhill Moore. (D. Appleton & Co., \$2.) Provides for business men, bankers and brokers, students of business methods, employees, and the general reader, a serviceable reference book covering carefully and comprehensively the use or law of commercial paper now used as medium of exchange.

**ANYTHING AND SELLING PRACTICE**, by John R. Ostryke. (A. W. Shaw Co., Chicago.) Written with a decidedly pedagogic aim and is in consequence more likely to interest the teacher and the student than the experienced man of affairs. The extensive bibliography is useful.

**AMERICAN RAILWAY ACCOUNTING**, by Henry C. Adams. (Henry Holt & Co., \$3.) Has for its chief aim the explanation of accepted standard accounting rules and the making clear what is meant by a scientific system of accounts; the author is the recognized authority on the subject and his book is basic for students of accounting and for officials.

# Brush Teeth In This Way for a Week

*All Statements Approved by High Dental Authorities*

## Watch the Film Go

Dental science has obtained a new and better method of teeth cleaning. Able authorities have proved it by clinical tests.

It is now embodied in a dentifrice called Pepsodent. And we offer you a special tube to show its unique results.

Its object is to end the film on teeth—the cause of most tooth troubles—that slimy film which gets into crevices and stays, and which resists the tooth brush.

That film is what discolors—not your

teeth. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film is the great tooth destroyer.

Old methods of tooth brushing fail to end film. That is why brushed teeth discolor and decay. This new method does remove it, and we urge you to prove it by a simple test.

## A New Dental Era

Dental authorities have watched the Pepsodent action in thousands of cases. Years of proving show that this product marks a new dental era.

It is based on pepsin, the digestant of albumin. The film is albuminous matter. The object is to dissolve the film, then to constantly prevent its accumulation.

Old methods for using pepsin were impossible on teeth. Pepsin must be activated, and the usual agent is an acid which destroys enamel.

But modern science has discovered a harmless activating method. Five governments have already granted patents. That method is employed in Pepsodent. And it solves the problem of this film as nothing else has done.

The result is a dentifrice which, authorities say, must supersede the old kinds. You will know that when you try it.

Send the coupon with 10 cents for a special tube. Use it like any tooth paste and watch results. Note how clean your teeth feel after using. Mark the absence of the film. See how teeth whiten as the fixed film disappears.

Those results are essential to your teeth's protection. You will want them always when you see them once. Cut out the coupon now.

## Pencils and eye glasses

You wouldn't want to read all day through another person's glasses. Of course not! And neither should you work all day with a pencil never intended for your kind of work.

## DIXON'S ELDORADO

*"the master drawing pencil"*

has, among its graduating degrees, a pencil of the precise hardness or softness to suit each kind of work—each individual taste. The strong, smooth, responsive leads are making work easier, quicker, more economical in every industry and profession. Made in 17 degrees—9H (hardest) to 6B (softest); HB (medium) is most popular for general work.

Write us the nature of your pencil work and name of dealer, enclosing 15c in stamps, and we will send you full-length samples of the right degrees for you, worth double the money—also our chart showing the uses of the 17 degrees.

## INDEPENDENT OPINIONS

I desire to express particular commendation of three editorial articles which appeared in your issue of Sept. 21 on "Intellectual Preparedness," "Coal" and "Liberty After the War." These articles to me appear to be particularly timely.

If I am informed correctly there are states in the Middle West where it is forbidden to use in public any language but English; and even in the homes—so the report goes—it is unlawful for any but those who know no other language but their native language to use anything but English. This, if true, matches the intolerance of the most intolerant state of Europe.

The coal situation could not very well be more wretched. All thru the last season there was open selling at prices beyond the supposed maximum. Early this year we were urged to "Order early." Notwithstanding this, some who ordered in the middle of March when coal was at \$8.50 still have empty bins, and the price is \$11, and going up.

The last paragraph of your article "Liberty After the War" beginning "The one restriction of liberty that is without excuse that imposed by intolerance, fanaticism and mobmindedness," is particularly timely, for there is at the present time in this country a federation of church leaders, growing in influence and power, whose avowed purpose is to mold by legislation the religious practise in this country in conformity with their ideas.

The editorial in the September 14 issue, "Scientific Permission to Eat," is one from which I must mildly dissent, notwithstanding Professor Osborn's high standing, for the following reasons:

1. My experience with patients is that a large proportion, when choosing their own menu, will persistently eat those things which hinder their recovery.

2. The experience of such men as Luigi Cornaro and Horace Fletcher, show that long life and splendid endurance may result from a voluntary restriction from food from what one has eaten when "following his instincts."

3. Life insurance statistics show that the life expectancy of a man of thirty-five is better if he is 10 per cent under average weight than if he is the average, and very much better than if he is above the average. If this means anything at all it means that the average man, when following his instinct, eats too much.

4. How about the "instincts" that lead man to use alcohol and drugs? There is hardly a native race but has found and put in use some one or more of some of these narcotic drugs.

G. H. HEALD

Washington, D. C.

To find three likable editorials in a single number is great good luck. We wish we could keep up that average for every issue and each reader. The mild criticism of the fourth editorial is no less welcome than the commendation of the other three. Dr. Heald, who is editor of *Life and Health*, raises some good points. But in calling attention to experiments that go to prove that the normal appetite is on the whole a good guide we did not mean to imply that everybody, even a person of diseased or perverted appetite, should eat everything or all be wanted to on all occasions.

We who are working for international relations founded on justice and democracy repudiate the name "pacifist" in its present interpretation. The words "pacifist" and "pacifism" came from Europe years ago in good standing, and in their original sense stood for world organization and the final abolition of war. They were, however, never

satisfactory to most of the American workers because of their passive sound and capacity of being misconstrued.

Recently these words have been made to stand for qualities both weak and bad—qualities from which in their original meaning they were as far removed as patriotism is from disloyalty. The vast majority of members of peace societies are as remote from "pacifism" when interpreted as cowardice, sedition, and treason, as are workers for righteousness from promoters of unrighteousness.

Our belief is what it always has been, viz., that a League of Nations must be formed to keep order and promote justice in the civilized world by means of an International Court, a Council of Conciliation, and an international force. The fruits of this war must be a better and a war-less world.

MRS. J. MALCOLM FORBES and others.

We sympathize somewhat with the feeling of these protestants. The word "pacifist," imported into the language from the French within the last five years, has never been popular among those to whom it was applied and now is decidedly unpopular. It is especially a glaring misnomer when applied to the advocates of a League of Nations, for the prevention of war is only one of the objects of such a world organization. As well call the framers of the American constitution pacifists because one of their objects was "to insure domestic tranquillity." As well call the church an "Anti-Sin Society." The negative aspect of the movement is not the most important altho it has too often been made the most conspicuous.

Your issue 7th inst., "Stop the tiger"—a perfectly desirable suggestion, and if we were dealing with ordinarily constituted human beings something could, no doubt, be done to minimize further loss of the unreplaceable.

Unfortunately, however, we are face to face with facts which must place the entire odium for this disgusting conflict on the shoulders of the Germans—the German people as a mass without any fool distinctions.

Unquestionably the Central Powers must be made to pay handsomely—so far as money can pay—for all replaceable damage. But, if there is any sense of justice left in us there must be a sort of reparation extorted for those exquisite monuments of human genius—such as the Cloth Hall of Ypres, Reims Cathedral, etc.

To carry out such a proper and most necessary and salutary course at least a similar number of such edifices in Germany and Austria should be destroyed.

People capable of rebuilding such edifices as Germany has so wantonly and maliciously destroyed no longer exist. We are mechanics nowadays—not artists.

WILLIAM DUNSMORE BOHM

Boise, Idaho

The world is greatly the loser by the destruction of the Cloth Hall of Ypres, the Cathedral of Reims and the Library of Louvain. We cannot see that the world would be the gainer by the destruction of the Rathaus of Nuremberg, the Cathedral of Cologne and the Library of Leipzig. To destroy a building of a captured city is the same as killing a prisoner. Both edifice and individual are irreplaceable. We cannot adequately punish the Germans for such wanton destruction of life and property but that is no reason for imitating them.

**Send Your Name and We'll Send You a Lachnite**

DON'T send a penny. Just send your name and say, "Send me a Lachnite mounted in a solid gold ring on 10 days' free trial." We will send it right to your home. When it comes merely deposit \$1.75 with the postman and then wear the ring for 10 full days. If you, or if any of your friends can tell it from a diamond, send it back. But if you decide to buy it—send us \$2.50 a month until \$18.75 has been paid.

**Write Today** Send your name now. Tell us which of the Lachnite rings illustrated above you wish. Be sure to send finger size.

Harold Lachman Co., 12 N. Michigan Av., Dept. 2188 Chicago

## BUILDING AN OFFICE LIBRARY

(Continued from page 214)

methods of the banking business are taught by executives of the institution, and by trained professors from the best university faculties. The president of the institution, Frank A. Vanderlip, says that in addition to doing a full day's work at his bench or desk a young man should make another day out of his spare time and devote this day to learning all about his profession, so as to understand the meaning of every thing he does, the approved process and the fundamental principle, and thus be equipt to rise to any height of opportunity that may appear. The phenomenal success of Mr. Vanderlip in promoting the huge War Savings Thrift campaign is but a reflection of the way he educates his own employees. And he himself is the greatest student of them all.

A big store also needs a big library, and a competent system of reading and studying for clerks and executives. The first "store university" based on the proper selection and use of books was founded by John Wanamaker and has graduated thousands of students. The founder states frankly that whatever success has been attained by the Wanamaker stores in service to the community has been due largely to the education of store employees. Hundreds of books are used regularly for this purpose. A preparatory institute of commerce and a university with postgraduate courses furnish, practically without cost to the student, both technical training for work and a general training for life, to all employees from the youngest to the oldest. They are taught not only how to judge and sell goods, but also how to please the customer at any cost; how to tell the exact truth about the store and the merchandise; how to be careful, thoughtful and courteous; how to dress neatly; how to avoid offense in word or manner; how to cultivate and radiate optimism; how to conserve health; how to save money; how to develop personality; how to take a sensible vacation; how to enjoy play, music and literature; how to understand business aims and principles; how to render community service; how to improve home life.

A great factory also needs a great library. We note a few points of interest from a recent personal visit to the National Cash Register Company. Probably no manufacturing plant in the country has done more to utilize current publications for the benefit of employees and officials. The library occupies one of the largest, lightest and brightest rooms, near the main entrance of the administration building, so that employees may stop whenever they have a little time for reading or studying. The library contains several thousand books, magazines, digests and reviews, technical reports, industrial bulletins, classified lists and bibliographies, and other guides to effective reading by employees, with enough floor space to accommodate more than a hundred persons reading at the same time. The library is open week days from 7:30 a. m. to 5:30 p. m. An expert librarian has charge of the books, and employs a number of assistants to help her handle the volume of requests for information of all kinds. The arrival of new books is noted on a printed leaflet for general distribution every month; books mentioned on one of these lists showed that 124 new volumes were added to the library in a single month and embraced such a variety of topics as the following: advertising, auditing, cams, coal tar dyes, cooking, housekeeping, dies, drawing, electricity, electrotyping, emery industry, enameling French, inspirational

reading, lubrication, machinery, mathematics, metal coloring, millwrighting, Monroe Doctrine, miscellaneous, out-of-doors books, paint, patents, printing, retailing, safety, shop management, steel, salesmanship, stenography, theatricals, welding.

The efficiency of this library is denoted by its popularity. The record of a recent year shows that 1116 employees and executives were members of the library; questions about study, reference, personal and industrial problems, to the number of 2130 were asked and answered; the books circulated reached the number of 12,200; and the reading attendance for the year was 16,257. The members of the library drew for home study an average of a book a month. How many of your employees or associates read a book a month right along, on expert advice, for their own professional and personal advancement? The National Cash Register Company is the dominant organization in its own field thruout the world. If the president, John H. Patterson, regards a modern library system fundamental—as he does—to the highest mentality, productivity and general welfare of his employees, would it not pay you to see just how a library can be made to serve the interests of your business organization?

What now are the first moves to make in building an office library? We will map out a general construction program whose specific details must of course be handled by local officials, and may be modified or developed to suit individual circumstances or preferences.

1. Before you make any move at all, get your people interested. Make them want a library. Show them what it will do. Start with the high officials, but do not stop there. Go slowly and carefully; produce an array of facts, to convince mind, heart and pocketbook of all the members of your organization that they need a library. Use one or more of the following methods. Read this article first to a small group of high officials, then perhaps to the library committee noted in paragraph 2 below. Have a questionnaire printed, typewritten or duplicated for distribution among all your officials, the purpose of the questionnaire being to find what book or books each of your head men has found most valuable in shaping his career, helping him over hard places, teaching him greater proficiency in his trade, business or profession, training him to think more clearly and rapidly, increasing his income, reducing the cost of working or living, or otherwise helping the man to get ahead in the world. The questionnaire might also ask what method he followed in buying, selecting and using publications for his home library; what three books he would consider most valuable for the average employee of your concern to read and study; what business, trade or professional journal he considers the best in your line; what plans, methods or ideas taken from current books and magazines have been financially profitable in his department; and what kind of home study he regards the best to prepare any worker for the job higher up. A questionnaire along this line should prove exceedingly valuable. A lecture, blackboard talk, or question-box address by experienced librarian, or by an official of a large company owning and conducting a library with marked results in the form of benefits to employer and employees, would be a most desirable educational feature by way of demonstrating what books can do for business efficiency. A wealth of facts and illustrations along this line should be available from publishers of business books, the editors of library journals and professional magazines, and the officials of the great national library organizations mentioned in paragraph 3 below. You need a lot of bedrock facts to

show what a library has done for other concerns before you start an agitation to build one.

2. Make a library survey to include all departments and all employees. Only this can properly determine the number and variety of the publications you need. A blank form to serve as a model for this might be had from one of the library associations mentioned below. Or you might create your own survey system analogous to the methods of community survey adopted by such national organizations as the Russell Sage Foundation or the Survey Associates. This matter and all matters pertaining to the library should be handled by a library committee composed of three to seven members or with a representative from each department, the majority of the committee being officials of the organization selected by officials, and the minority being employees selected by employees. The survey should include among other points the following: number and classification of departments; number of employees in each; relative chance of promotion in each; comparative questions, problems and difficulties in each that might be solved by a good library service; number and classification of home libraries of employees; average amount of spare time that employees would devote to reading and studying if they had opportunity; kind and extent of reading done by employees for self-improvement; names or subjects of books the employees would like to have in the library; general education of employees as a whole; size, extent, quality and availability of the nearest public library; specific needs and uses for company library, determined by nature of work being done or by local conditions; views and experiences of employees and officials who have connected with or access to an office or institutional library maintained by some other organization.

3. Consult an experienced librarian. Do this before you buy a single book. To start a business library without consulting a librarian would be as foolish as to start a business building without consulting an architect. The matter of creating and conducting a library forms a science in itself. You should be able to procure valuable advice from the head of the nearest large library. Editors of library journals could offer excellent counsel; if your concern is large enough to afford the services of a trained organizer, you would do well to apply to the American Library Association for one of its graduate experts.

4. Your library should contain books ultimately that apply to every department of your work and every official and employee of your company. You would be helped in making out your list by studying the classified bibliographies of libraries conducted by leading corporations and private institutions; a record of such bibliographies may doubtless be had from officials of the Special Libraries Association, or possibly from the director of a large public library located near you.

5. Get all the available free literature and free education on office tools, machines, furniture, equipment and supplies. Scores of manufacturers of articles to aid office work include in their descriptive literature valuable hints to office workers on handling their job. Some of these manufacturers employ experts to assist without charge both actual and potential customers. You should have all these sources of information classified in your library under topical headings. Most literature of this kind is mailed by the publishers without charge or at less than actual cost; and the small fee usually charged by a clearing house or consulting bureau specializing on efficiency data is considerably less than you would have to spend in making independent investigations

for yourself. To get this matter clearly before you, write for Check List on Office Efficiency mailed free by the Plan and Purchase Department of the Independent Efficiency Service, 119 West Fortieth Street, New York.

6. Find or train a good librarian. This matter is exceedingly important. You should employ a graduate librarian; or send a member of your concern best fitted for the post to a regular library school for a period of resident training; or have an expert organizer from a library school or association come to your establishment and personally supervise not only the education but also the selection of your librarian.

7. Make your reading room the most attractive place on the premises. You can afford to employ a first class decorator who is also a color expert and knows how to paint a room in soft, restful colors, cheerful and attractive in appearance. A few choice portraits or engravings or reproductions of famous paintings should be hung on the walls. To secure both physical relaxation and mental concentration, silence should be enjoined and maintained.

There should be ample light everywhere, and the chairs at reading desks and tables should be so placed if possible that the eyes of readers are away from the windows and toward the bookshelves or the blank walls. But do not be discouraged if you cannot immediately observe all these points; you can if necessary build a library without any reading room in the beginning by limiting your distribution of books to a circulating plan, requiring only a few bookshelves in a secluded corner to start with.

8. Show employees how to use books to the best advantage. First is the avoiding of injury to books that results from marking or defacing them; from handling with soiled fingers; from neglecting to use bookmarks and creasing pages instead of leaving book wide open, face down; from tearing or cutting unevenly the pages of new books; and from opening new books the wrong way and thus weakening their binding or breaking their backs. However, the most important thing is to get employees to want to read and study books for themselves. To accomplish this the library directors of large corporations have adopted a variety of means and methods, a few of which we name briefly. Suggestion box offers reward of \$1 and upward for any practical idea found in book or magazine of library. All publications in library placed on shelves by topical and numerical classification, so that any employee can find the book he wants for himself, take it to library desk and have record made without asking help from library officials. New books worthy of it given blackboard demonstration before gathering of employees. Book review department in house organ or special bulletin gives attractive mention of new publications just arrived. Pocket folders giving complete list of technical books in library furnished to employees of every department and carried or placed on file for reference. Opportunity given to employees who cannot visit the library personally to make selection of books and forward to library by special clerks detailed for that purpose who deliver book to employee on return trip. Classes for employees based on textbooks or collateral reading from library. Special readings from new books given periodically by trained public speaker. Daily or weekly reading course mapped out for different classes of employees.

Every dollar and every hour you devote to building up an office library means a permanent investment that should bring the highest dividends of any outlay of time and money. The bulwarks of a business enterprise are the standard books embodied in the work of employees.

## Nationally known makers of auto parts use Art Metal

IN this great industry, as in almost every other—a census of the leaders almost invariably is a census of users of ART METAL Steel office furniture, safes and files.

Following is only a partial list of the automobile-accessory manufacturers who are users of ART METAL:

Electric Storage Battery Company  
Hyatt Roller Bearing Company  
National Carbon Company  
Timken Roller Bearing Company  
Timken-Detroit Axle Company  
Willard Storage Battery Company  
Westinghouse Electric & Mfg. Company  
Ericsson Manufacturing Company  
Splitdorf Electrical Company  
H. W. Johns-Manville Company  
Standard Parts Company  
Wire Wheel Company  
Northwestern Chemical Company  
Moto-Meter Company  
Gurney Ball Bearing Company  
Remy Electric Company

## A TALK WITH THE KING OF ITALY

(Continued from page 207)

listening device installed in the Allied  
navies for the detection of submarines un-  
der water. As to the Zeppelins, he felt they  
had proved of no value. But stationary bal-  
loons, he said, were good.

When I asked him to let me send a mes-  
sage from him to the American people, all  
he said was, "They know what I think,"  
and when I told him that the things I had  
seen with my eyes since I had been only  
a few weeks in Europe had made a thou-  
sandfold greater impression on me than  
four years' previous study of the war had  
done, he said, "Yes, that is always the case  
even in the simplest things. The eye is the  
most intelligent organ of the human body."

While we discussed various phases of the  
international political situation very free-  
ly, I would not be at liberty to give a ver-  
batim report of his opinions. In fact he  
was very careful in talking with me not to  
express himself too positively on certain  
matters of state policy. When I spoke, for  
instance, about the desirability of establish-  
ing a League of Nations at the close of  
the war, all he said was that the subject  
was a big one. He then signified that the  
interview was at an end and I rose and  
departed, feeling that I had met not only  
a king, but a man.

The Italians seemed never to tire of  
speaking to me in the highest praise of our  
President. May I say that every American  
can well give his admiration to this great  
Italian leader, who is a democrat as well  
as a king.

## FOR BETTER INDUSTRIAL COOPERATION

THE Chamber of Commerce of the United  
States announces plans for assembling  
at Atlantic City on December 4, 5 and 6  
all members of the country's more than  
three hundred industrial war service com-  
mittees for a great war emergency and re-  
construction conference.

The main purpose of the conference will  
be the determination of practical methods  
whereby industry may coöperate still more  
closely with the Government thru a more  
centralized scheme of organization. Ques-  
tions of reconstruction, too, will be taken  
up. For nearly a year the Chamber has  
been engaged in directing the organization  
of war service committees in all lines of  
industry, to assist the Government in mobil-  
izing most effectively the country's indus-  
tries for prosecution of the war. It is evi-  
dent that however near or far away the  
end of the war may be, it is necessary to  
begin to outline a general program of or-  
ganizing business for the period of recon-  
struction.

The war service committees represent  
the most important and best informed body  
of business men ever associated for a prac-  
tical and patriotic purpose, assuring a con-  
ference which will be one of the most im-  
portant business gatherings ever held in  
this country.

Questions foremost at this time in the  
minds of every business man will be dis-  
cussed at the conference by the best authori-  
ties that can be assembled. The conferences  
will include general sessions at which ques-  
tions common to all industries will be taken  
up, sessions of committees within particu-  
lar industries at which specific industrial  
problems will be discussed, meetings of re-  
lated war service committee groups, and  
conferences of individual war service com-  
mittees.

## "Victor" METAL BASKET

The  
"Victor"  
Metal Basket,  
finished in Olive  
Green, Oak and  
Mahogany, is seen  
in most well appointed

## Pebbles

From the prize-winners of *Life's* \$12,000 short story contest, edited by Thomas L. Masson, we quote these *Best Short Stories*. The book contains five or six dozen more, almost as good. (Doubleday, Page & Co., \$1.25.)

Even certain professors, who are supposed to be immune from commercial inducements, are sometimes financially overcautious. A party of tourists were watching Professor X as he exhumed the wrapt body of an ancient Egyptian.

"Judging from the utensils about him," remarked the professor, "this mummy must have been an Egyptian plumber."

"Wouldn't it be interesting," said a romantic young lady, "if we could bring him to life?"

"Interesting, but a bit risky," returned Professor X. "Somebody might have to pay him for his time."

The sergeant-major had the reputation of never being at a loss for an answer. A young officer made a bet with a brother officer that he would in less than twenty-four hours ask the sergeant-major a question that would baffle him.

The sergeant-major accompanied the young officer on his rounds, in the course of which the cook-house was inspected. Pointing to a large copper of water just commencing to boil, the officer said:

"Why does that water only boil round the edges of the copper and not in the center?"

"The water round the edge, sir," replied the veteran, "is for the men on guard; they have their breakfast half an hour before the remainder of the company."

Levi Cohen was looking very dejected. That morning he left the house with five pounds in his pocket to try his luck at the races, but, alas! he had returned at nightfall footsore and weary, and nothing in his possession but a bad half-penny.

No wonder his better half was in a bad temper. "How is it," she snapped, "that you're so unlucky at the races, and yet you always win at cards?"

"Well, my dear," responded Levi, meekly, "you see, it's this way: I don't shuffle the horses."

An alien, wishing to be naturalized, applied to the clerk of the office, who requested him to fill out a blank, which he handed him. The first three lines of the blank ran as follows:

Name?

Born?

Business?

The answers follow:

Name, Jacob Levinsky.

Born, Yes.

Business, Rotten.

On the evening before a solar eclipse the colonel of a German regiment of infantry sent for all the sergeants and said to them:

"There will be an eclipse of the sun tomorrow. The regiment will meet on the parade ground in undress. I will come and explain the eclipse before drill. If the sky is cloudy the men will meet in the drill shed, as usual."

Whereupon the ranking sergeant drew up the following order of the day:

"Tomorrow morning, by order of the colonel, there will be an eclipse of the sun. The regiment will assemble on the parade ground, where the colonel will come and superintend the eclipse in person. If the sky is cloudy the eclipse will take place in the drill shed."

A British soldier was walking down the Strand one day. He had one leg off and an arm off and both ears missing and his head was covered with bandages, and he was making his way on his gear as best he could, when he was accosted by an intensely sympathetic lady who said:

"Oh, dear, dear! I cannot tell you how sorry I am for you. This is really terrible. Can't I do something? Do tell me, did you receive all those wounds in real action?"

A wistful expression came over that part of the soldier's face that was visible as he replied:

"No, madam, I was charged out the enemy's line, and the dead bird hit me."

The officer of the day, during his tour of duty, passed to question a stray who was a new recruit.

"If you should see an armed party approaching, what would you do?" asked the officer.

"Turn out the guard, sir."

"Very well. Suppose you saw a battleship coming across the parade ground, what would you do?"

"Report to the hospital for examination, sir," was the prompt reply.

A little girl on a train was chewing gum. Not only that, but she insisted on pulling it out in long strings and letting it fall back into her mouth again.

"Mama," said her mother in a horrified whisper, "Mabel, don't do that. Chew your gum like a little lady."

## LOCKWOOD, GREENE & CO. ENGINEERS

**M**ANY manufacturers know they are not getting as much heat and power from coal as they should. If you are one of them, what are you going to do about it?

Other manufacturers up against the same proposition have come to us—asked us to find a better way to handle their power supply problems. That's what the Revere Rubber Company, of Chelsea, Mass., did.

And in conjunction with the master mechanic, we worked out the solution—changing the system of traps, rearranging the power lines, making better use of exhaust steam and in other ways "toning up" the plant.

Your problems may be similar. Your government has asked you to save coal. It may be a question of developing a nearby water power or using a substitute for coal. Or buying power from a central plant—or improving present operating methods. Or an entirely different proposition.

We don't pretend to know it all—but we have had a lot of practical experience in this sort of thing. You can get in touch with us by writing our nearest office.

*Do this, too—ask for our book, "Steam Power Plants."*

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 119 West 40th St., New York.

# Case of the United States Against Germany

As Set Forth by

JAMES BROWN SCOTT, A.M., J.U.D., LL.D.

*President of the American Institute of International Law,  
Major and Judge-Advocate, U. S. Army*

IN THREE VOLUMES—BASED ON OFFICIAL DOCUMENTS

## Diplomatic Correspondence Between the United States and Germany. Net \$3.50

CONTAINS the diplomatic correspondence between the United States and Germany. This correspondence forms the background for all the President said and wrote to Germany, and is in a very real sense the case of the United States against Germany.

## A Survey of International Relations Between the United States and Germany. Net \$5.00

CONSIDERS, in narrative form, each issue as an episode and discusses it in the light of the correspondence, the practice of nations, and the views of publicists, including those of Germany. Over 100 pages of translations from German authorities showing the German conceptions of the state and international law, are given.

"In this admirable survey Dr. Scott has given us the most comprehensive and most thoroughly documented exposition of the relations of the United States to the Great War which has been published. . . . It is throughout scholarly in its method and workmanlike

in its execution. . . . The volume is quite indispensable to the international lawyer, will be extremely useful to the historian, and has much interest for the general reader."—The Hon. David Jayne Hill in the *American Journal of International Law*.

## President Wilson's Foreign Policy Messages, Addresses, Papers. Net \$3.50

CONTAINS the messages, addresses and papers of President Wilson stating, in his own words, every principle which, before and since our entrance into the war, he has deemed essential to a just and permanent settlement of the issues involved.

"In a brief explanatory note to each successive message, paper or address—the full text of which is reproduced—he makes its particular relation to the rest amazingly clear. Each annotation is a marvel of brevity, relevancy and scholarship. Without ever being argumentative, without ever departing from the

impartial, judicial tone that characterized his previous works, Mr. Scott has contrived to present the vital sources of contemporary American history in a manner that will educate, interest and inspire every true American."—*Philadelphia Press*.

119 West 40th Street New York

## What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15¢ in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sane, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15¢ to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15¢ does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## WHY NOT LIBERTY MOTORS WITH BRITISH WINGS

(Continued from page 204)

the British pilot and the British engineer. For the heavy type of aeroplane there is no better motor in the world today. In power, in steadiness and in reliability the much vaunted American motor has actually exceeded the expectations of the English air-men who have flown it.

But this very success of America's standardized motor fills the experienced British engineer with doubt as to the future of America's aviation program. Already England has perfected a lighter and more powerful motor. Other nations will undoubtedly do the same. America then no sooner begins the production in quantities of her standardized engine than she finds it out of date. She must constantly improve. And constant improvement is the proverbial enemy of standardization.

The aeroplane's engine will doubtless always be the weakest link in its chain of production. Pilots can be trained and aeroplanes can be constructed faster than engines can be supplied to drive them. England has warehouses filled with aeroplanes waiting for their motors. Pilots are trained and waiting to fly them. Our own predicament in the United States is still more illustrative of the importance of a large output of motors. For we have thousands of pilots waiting for war machines in America as compared to hundreds here. If the obvious answer to this analogy is the reply that we now have large numbers of Liberty motors on hand but no aeroplanes on which to carry them then the pertinent query arises as to why America's motors and England's aeroplanes are not immediately brought together.

It is not strange that America's imitation of European aeroplanes failed. England made a failure in duplicating certain designs of other nations. France, too, has had her "wash-outs." But both England and France have had their conspicuous successes because their own designers constructed the machines.

America has her own aeroplane designers, some of whom have contributed genuine prize-winners to the aviation world. Until these Americans design and construct their own machines America will continue feebly to imitate and follow the rest of the aeroplane world instead of leading. After wasting millions of dollars and months of still more precious time it is not yet too late to call into conference the aeroplane brains of America.

As to the actual matter of greatest importance—the getting on with the war—it seems plausible to say that had the raw materials and the laborers used in the recent "wash-outs" of the American-made Bristol Fighters and De Havillands been sent to the Bristol and De Havilland factories here the machines would have been at the front today. These raw materials and workmen would have taken up one-tenth of the shipping space required for the completed aeroplane. The factory space here would be doubled if necessary. There would then be no problem of getting aeroplanes overseas and little probability of wasted effort. As we are allies and all are moved by but the one desire—to get done with this war—we cannot do better than correlate all our movements in the most efficacious way possible.

In other words, if America proposes to imitate European models of aircraft these models can be more cheaply and surely made here (and their transportation problem solved) than in America. Engines can

be sent from America, as they take up little space and it has been demonstrated that they can be satisfactorily produced.

When it is considered that a trans-Atlantic flight requiring thirty flying hours would consume approximately one-half the life of an aeroplane motor besides the probable high average of casualties to aeroplanes and pilots, this method of transporting machines to the battle front cannot be seriously anticipated. The Huns know that as well as we do and they are equally well informed as to the number of crated aeroplanes our ships can carry. What would most annoy them would undoubtedly be the spectacle of America and England working out one aeroplane problem between them as whole-hearted allies should.

Apropos of the British silence on her exploits in aviation I find that her air fighters lead the world in numbers of victories won. There are over twenty British combat fighters who have scored more than thirty official victories each. Only fifteen of the Hun pilots, dead and living (and most of these are in the latter class), have claimed as much.

The leading twenty aces of the British have brought down some 850 aeroplanes of the enemy. This is almost one hundred more than the best twenty aces of the Huns have ever claimed. There is no longer the slightest question as to the inferiority of Germany in the air.

## A SEQUEL TO "THE BLUEBIRD"

(Continued from page 208)

(nestling more closely). Oh, such fun! . . . Do you like it, too?

The Phantom. Yes . . . Yes, I am happy. The Smallest of Them All. Why aren't you laughing?

The Phantom. Because I am too happy. The Smallest of Them All. So am I, so am I! . . . Don't look; I'm going to cry a little, but it doesn't mean anything. . . .

The Phantom (beginning to return his kisses and caresses). I'm going to cry, too.

The Smallest of Them All (intoxicated with rapture). You're kissing me! . . . Mummy! . . . Then it's true, then it's true, it is you! . . . Again, again! . . . No, not any more: I can't bear it! . . . Will they understand, will they be able to understand?

The Phantom. Call them, it is time. The Smallest of Them All. Don't cover your face: they wouldn't see it and they wouldn't believe me . . . (drawing aside the veils). Oh, mummy, how lovely you are! . . . (her hair spreads over her shoulders). Oh, mummy, your hair! . . . What lots of it! . . . There, that's much better. I can kiss you better so . . . (listening). Listen, they're coming back! They're here!

This is a poignantly lyrical scene that must indeed set the heart of an audience beating in unison. The discovery made by the Littlest One jogs Tyltyl's Memory, and tho, at first, he does not remember, his mind is at least set at rest about the six girls, who, in his boyish exuberance, he has momentarily loved. It is not until the very last scene that he recalls the Veiled Figure. You who have seen or read "The Blue Bird" will guess who she is before the end of the play. How many of us in our youth have played with the very girl who later is to be bound up with us in the life of love ahead of us. We have had our calf loves, just as Tyltyl, and have had our adventures, only suddenly to become aware that, veiled in mystery, there stands before us, at our heart's command, the one and only choice.

"The Betrothal" is, therefore, a fantastic romance that plays lightly with a journey we all have to take. Fortunately for its delicate fabric that it is being handled for the theater by the same manager who gave us "The Blue Bird" in such beautiful and delicate external pictures. Mr. Winthrop Ames understands how to externalize

# Watch Your Nerves

by

PAUL von BOECKMANN

The greatest of all strains upon the human body is that caused by nerve tension. Instant death may result from great grief or a sudden fright. The strongest man may in a few months shrink to a skeleton through intense worry. Anger and excitement may cause an upheaval of the digestive and other organs. It is simple to understand, therefore, that lesser strains upon the nerves must slowly but surely undermine the vital forces, decrease our mental keenness and generally wreck the body and health.

In this simple truth lies the secret of health, strength and vitality. The noted British authority on the nerves, Alfred T. Schofield, M. D., the author of numerous works on the subject, says: "It is my belief that the greatest single factor in the maintenance of health is that the nerves should be in order."

It is in the nerves that Nerve Force is generated, that wonderful power which gives life and action to every cell of the human body. When the nervous system becomes fagged out, because of worry, overwork, abuse and other strains, the flow of Nerve Force becomes feeble, and we become feeble all over. When the flow is strong, we feel strong all over—mentally, physically and organically. This is an immutable law of Nature.

Few people realize the powerful influence the nerves have upon our well-being, and how they may torture the mind and body when they become deranged, super-sensitive and unmanageable. Few people realize they have nerves, and therefore heedlessly waste their precious Nerve Force, not knowing that they are actually wasting their "Life Force," and then they wonder why they lack "Pep," have aches, pains, cannot digest their food, and are not fit, mentally and physically.

Just think a moment what a powerful role your nerves play in your life. It is your nerves that govern the action of the heart, so that your blood will circulate. It is your nerves that govern your breathing, so that your blood will be purified. It is your nerves that promote the process of digestion, assimilation and elimination. Every organ and muscle, before it can act, must receive from the nerves a current of Nerve Force to give it life and power.

Your body and all its organs and parts may be compared to a complex mass of individual electric motors and lights, which are connected with wires from a central electric station, where the electric power is generated. When the electric force from the central station becomes weak, every motor will slow down and every light will become dim. Tinkering and pampering the motors and light will do no good in this case. It is in the central station, the nervous system, where the weakness lies.

I have devoted over thirty years to the study of physical and mental efficiency in man and woman. I have studied carefully the physical, mental and organic characteristics of over 100,000 persons in this time. As my experience grows, I am more than ever convinced that nearly every case of organic and physical weakness is primarily due to nerve exhaustion. Powerful and healthy looking men and women who did not show the least outward signs of weak nerves, were found upon close mental and

physical diagnosis to have exhausted nerves. Usually every organ was perfect and the muscles well developed, but there was not sufficient flow of Nerve Force to give these organs and muscles tone and power. How often do we hear of people running from doctor to doctor seeking relief for a mysterious "something the matter" with them, though repeated examinations fail to show that any particular organ function is weak? It is "Nerves," in every case.

We are living in the age of nerve strain, the "mile a minute life." Every man, woman and child is over-taxing the nerves, thus wrecking that delicate system. Nerve strain cannot be entirely avoided, but it can be modified. Much can be done to temper the nerves against strain. Education along this line is imperatively necessary if we are not to become a race of neurasthenics (nerve exhaustion). I have written a 64 page book which is pronounced by students of the subject to be the most valuable and practical work ever written on nerve culture. The title of the book is "Nerve Force." It teaches how to soothe, calm and care for the nerves. The cost is only 25 cents (coin or stamps). Address, Paul von Boeckmann, Studio No. 61, 110 West 40th St., New York.

The only way to judge the value of this book is to read it, which you may do at my risk. In other words, if after reading the book it does not meet your fullest expectations, I shall return your money, **plus** the outlay of postage you may have incurred. I have advertised my various books on health, breathing and other subjects on this and other magazines for more than 20 years, which is ample evidence of my responsibility and integrity. Over a million copies have been sold.

You should send for this book to-day. It is for you whether you have had trouble with your nerves or not. Your nerves are the most precious possession you have. Through them you experience all that makes life worth living; for to be dull nerved, means to be dull brained, insensible to the higher phases of life—love, moral courage, ambition and temperament. The finer your brain is, the finer and more delicate is your nervous system, and the more imperative it is that you care for your nerves. The book is especially important to those who have "high strung" nerves, and those who must tax their nerves to the limit. The following are extracts from people who have read the book and were greatly benefited by the teachings set forth therein:

"I have gained 12 pounds since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have re-read your book at least ten times."

A woman writes: "Your book has helped my nerves wonderfully. I am sleeping so well and in the morning I feel so rested."

"The advice given in your book on relaxation and calming of nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."—Advertisement.

## The Lenox

In fashionable Back Bay, Boston

mystery: he approaches it as a dream that is true while it lasts, and he brings to bear on the new production the combination of artistic pictures and interpretative music. Who knows but that Maeterlinck, at his home in Nice, is now at work on a third play which will make Tytyl the hero of a trilogy? Light, when she tells Tytyl goodbye in "The Betrothal," declares that there is still another journey to take. And if one judges by Maeterlinck's interest in the future life, in intimations of immortality—so well marked in "Our Eternity"—the next Blue Bird play will exceed the morality "Everyman" in its spiritual facing and conquering of death. No play in a long while has been offered to the public so essentially youthful and merry and lyrical as "The Betrothal." A barrage of happiness it will prove to be for an evening of youth, behind which the grim reality of war will seem unreal.

## Remarkable Remarks

JUDGE WILLIAM H. WADHAMS—Win the next war now.

EZRA POUND—I believe in every man writing poetry who wants to.

ED. HOWE—Topeka, Kansas, is always knee deep in sentimental slush.

LORD MILNER—We need to think more of victory and less of vengeance.

HELEN KELLER—I tell you the hour of deliverance for all men is at hand.

MARSHAL FOCH—The will to conquer—such is the first condition of victory.

GENERAL LUDENDORFF—Hang on for another month and pray hard that November may bring deluges of rain.

DR. FRANK CRANE—I don't like spies, sneaks, tattle tales, trouble makers, they are the same as lice. Ugh!

THEODORE ROOSEVELT—What we want to do is to remain prepared so no nation will dare look cross eyed at us.

MAXIMILIAN HARDEN—Wilhelm has been changed into Filmhell and Germany into a poor moving picture theater.

GEORGE BRANDES—The war has set back humanity a century or more. It has poisoned the spiritual life of the masses.

WILLIAM H. TAFT—Never in the history of the country has the President held such vast and unlimited power as he has today.

THE KAISER—Wilson went into the war that he might have a seat at the peace table but he will never get it. I shall prevent it.

JOHN B. CROSBY—Answer to Prussia: We will not negotiate with murderers, palaver with pickpockets, nor parley with polecats.

CONGRESSMAN MEYER LONDON—The predominance of the lawyer in social and economic legislation is nothing short of a calamity.

LAURETTE TAYLOR—I am sure that if Mrs. Fiske had not been pushed on to the stage at the age of three she would have been a nun.

COLONEL GADKE—The German Army Command has resolved no longer to carry on the battle in an offensive form, but in a defensive one.

SAMUEL GOMPERS—I hope to live to see the day when the workmen of all nations will refuse not only to take up arms but to manufacture them.

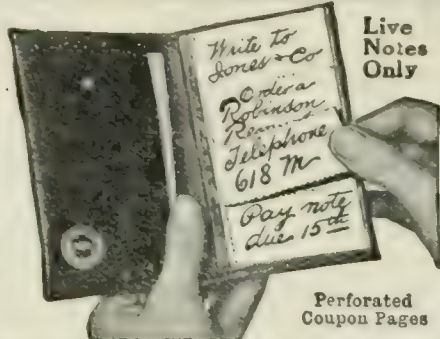

COUNT RANTZAU—The Belgian breed of horses will be indispensable for us after the war, and will provide us with our best and heaviest half-breds.

POLICE COMMISSIONER ELLEN O'GRADY—The lower animals, the young lambs, the birds of the air, go home when night falls. Why should our little humans be out late?

PREMIER LLOYD GEORGE—A League of Nations with a Prussian military power triumphant would be a league of one fox and many geese, many at first, then gradually diminishing in number.

## THE GREAT ADVENTURE

(Continued from page 213)

made a display that put any Fourth of July celebration in the shade. It is a curious feeling to stand out and watch a scene like that. You feel as if all the guns were aimed at you and you wonder why the shells fall some other place.

At 4:17 a. m. the barrage lifted and the Germans left their trenches. Then the French and American batteries opened up. Nuff said. The rattle of the 76s was as the roll of a snare drum and it continued with unabated fury till noon, when the Germans quit. They had made eight distinct attacks, but the artillery had smashed them all, aided by the infantry. In some places the infantry had little to do while in others there was bitter hand to hand fighting, but our doughboys proved equal and superior to the Prussian Guards. German prisoners said they simply could not pass the barrage and one captured officer wanted to see our "three inch" machine gun. But we held, and after four days the Germans withdrew their artillery and reserves, having their hands full elsewhere.

Since then we've had lots of marching and night work and are again on the front. I've passed over a real battlefield with all its signs, equipment, dead horses, German trenches, and lots of souvenirs. I could send home a carload of helmets, rifles, swords, etc., but am not collecting anything. I've learned just how much I can carry.

A truck driver gives a graphic description of one incident in his day's work:

One car blew out a gasket in the exhaust line and caught fire twice—the crew had a merry job heaving mud on it—one boy lay on his back under the gas tank and chucked the mud which was handed to him, up over the gas tank under the seat, while the whole pan above him was on fire. He was taking a long chance and he knew it, but he got away with it and saved a \$5000 chassis. He is but one out of many such boys whom I am working with—it is an honor to know such men and work with them—if you ever get in a tight place you can back on such to get you thru if it is humanly possible.

And here is an infantryman's letter that puts the frills on fighting in true American style:

My Pal, Al Langen, went out one day with a message and he met a Tommy on the road who told him he had better get off of it. Al thought he was trying to kid him and scare him, so—thick like the Irish—he kept moping along and Z-Z-Z-Z-Z-Z they came! Well, he ducked behind a bush with a soap box over his head, thinking that would save him. He did get away safe, but not until one of the fellows came along and saw him hiding under the box, and believe me that was a great laugh for all hands when we got together again.

When Quigley and I came back from battalion headquarters we found that our company had moved the night before, so it was a case of rope for us to find them. After going a short way we stopped at another outfit for breakfast and had oatmeal, bacon, fried potatoes, bread, jam and coffee—not so bad! After eating we put our packs on and beat it. At dinner we had steak, french fried potatoes, fried onions, bread, jam and coffee—grat from another company and were lucky enough at last to find our own outfit just as they were lining up for supper; so we were just in time but found that the next day we were due once more to move.

The next night we all broke camp and hiked about ten miles and then got on our dear "8 or 10," which means our parlor car. They are freight cars, slightly smaller than the ones in the States, and they put either eight horses or forty men in them. Well, we got on our special and after getting in, found we could put our packs against the side of the car for a cushion and sit down on our slickers and put our knees up so we might rest our elbows on them and then go to sleep, but there was little sleep in our car that night as we all had a singing fit on and you could not make us feel bad after the wonderful name our infantry made. When daylight came we opened the door on each side and sat looking out at the country, and, Ma, it was certainly beautiful. Picture me, if you can, sitting in the doorway of a freight, eating a bean sandwich as tho I was the happiest boy in the world.

Life here is a tough war, when you can see Harry Linder for nothing, also play ball and go to the movies in town on Mondays and Wednesdays.

The same satisfaction is less picturesque expressed by a sergeant in the A. L. F.:

To summarize the last annual course of my army life, I have passed in health thru roughing it, gained in experience, gained in friends. It has been a hard life at times, but this is a job you can't run if you don't want to. Right at the time when you are here you are so fully interested in what you are doing that the job and the Kaiser who asked it on us. And we won't be sent to any other war here. But then, Oh, Boy!

### Strengthen Your Eyes—Don't Coddle Them

Get this fact firmly fixed in your mind: glasses can no more *strengthen* your eyes than medicines can develop muscles in your body. What they are intended for is merely to *bolster up your vision*—that is all.

You take it as a matter of course that as you grow older you will need glasses. You regard this as being perfectly natural, logical—and inevitable; the eyes are bound to grow weaker as you grow older. This being a fact, is there no way to *prevent* such a condition? Read on. We shall see.

### What Causes Impaired Vision?

It is *not* that we abuse our eyes. It is *not* that they naturally and invariably grow weaker with age. It is *largely* our ignorance of the fundamental principles that govern sight. We seem to know how to develop the muscles in every organ of our bodies except our eyes. Until we realize that the power of vision is in direct ratio to the vitality of the muscles and other tissues of the eyes, and until we are taught how to *train* the muscles and vitalize the tissues of the eyes, we cannot hope to attain the fullest measure of visual efficiency, or to escape the penalty that is fixed for us: *wearing glasses*.

When you consult an oculist or optometrist about your eyes, he doesn't tell you what *CAUSED* the lessened power of vision which your eyes betray. He gladdens your soul by placing lenses before your eyes that improve your vision perceptibly. And you go away happy, confident that your visual troubles are over. But, with the passing of time, you come back for a stronger pair of glasses, for your eyes have grown weaker! What does this prove? That glasses do not strengthen the eyes and that not until you learn how to make your eyes constitutionally strong will you overcome the trouble!

### How to Strengthen Your Eyes

This Valuable Information Is Imparted to You in an Intensely Interesting and Practical Manner in a NEW COURSE OF EYE TRAINING.

## Are You In The Grip of GLASSES?

### "Strong Eyes"

By BERNARR MACFADDEN

This remarkable and revolutionary System of Scientific Eye Training consists of 28 lessons. It tells you everything about your eyes: What causes you to lose power of vision, and how to overcome it and make glasses unnecessary. It teaches you the relation of the muscles of the eyes to the sight and how to control and develop these muscles and bring about normal, clear, comfortable, easy and distinct vision.

It shows how to overcome squint eyes or cross eyes by exercises that restore control to the nerves and muscles of the eyes. It imparts valuable knowledge on every phase of eye diseases and teaches you how to beautify your eyes through eye-baths. Complete instructions together with test cards are given, for making your own test of your eyes.

### A Word About the Author

This valuable Course in Eye Training was evolved by BERNARR MACFADDEN, who has achieved an international reputation as a practical physical culturist and author of many standard books on the subject of Health. He does not wear glasses, yet at one time his vision was so bad that looking at a newspaper, everything appeared blurred and black. By experimenting on himself with the same system of treatment embodied in this Course, his eyes soon acquired their former vigor and clarity of vision.

### SEND NO MONEY

The Complete Course of 27 Lessons Will Be Sent to You on 5 Days' Free Trial.

To remove the slightest possibility of your not being entirely satisfied with the value of this Course of Eye Training, and to give you an opportunity to fully and freely put some of the practices and suggestions to actual use before you pay a penny for it, we will send you the complete Course of 27 lessons on 5 days' free trial. Use it for this period just as if it belonged to you, and if you are not convinced at the end of the trial period that you can derive great benefit by following the instructions given in this Course, return it to us in good condition and you will not owe a penny.

If you decide to keep it, mail us \$5.00, which is the regular price of the Course, and we will include a yearly subscription to PHYSICAL CULTURE MAGAZINE, free. Send in the coupon or write a letter for this valuable Course NOW!

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER.** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

#### I. A Talk with the King of Italy. By Hamilton Holt.

1. Give a character sketch of the King of Italy as presented in the article.
2. Compare the King of Italy with Shakespeare's "Henry V."
3. Contrast the King's actual manner with the manner Mr. Holt expected to observe.
4. Prove that the King of Italy has American characteristics.
5. Present an exposition of ordinary court etiquette.
6. Write an original story in which you tell of a most unusual series of events that led you into conversation with a king. Make your story emphatically present the king's character.
7. Explain in what respects the closing paragraph is excellent.
8. Tell the story of Petruchio and Katherine. ("The Taming of the Shrew.")
9. What is allusion? Why is allusion so effective in giving value to an article?
10. Compare the manner of Benjamin Franklin at the court of the King of France, with the manner of Mr. Holt in the presence of the King of Italy.

#### II. The Great Adventure.

1. The letters in the article were selected from many letters. Why were these particular letters selected? What are the characteristics of a good letter?
2. How do the letters here given differ from letters that you write?
3. Give a character sketch of the writer of the first letter.
4. Point out the color effects in the second.
5. What are the sources of humor in the third?
6. Write an answer, in like vein, to the letter that most pleases you.

#### III. Under the Evening "Hate." By William L. Stidger.

1. Show how the article is like any one of "The Sir Roger de Coverley Papers."
2. Write an original story in which you use Norton as the hero.
3. Point out the following effects in the article: contrast, climax, humor.

#### IV. Why Not Liberty Motors with British Wings? By L. L. T. Driggs.

1. Summarize what is said concerning British character.
2. Write a brief for the main thesis of the article.

#### V. A Sequel to "The Blue Bird." By Montrose J. Moses.

1. Tell something concerning Maeterlinck as a writer.
2. Tell the story of "The Blue Bird."
3. Tell the story of the new sequel to "The Blue Bird."
4. Explain what is meant by a "fantasy." Why are fantasies so pleasing?
5. What is meant by saying that the play is "packed with philosophy"?
6. What is a morality?

#### VI. The New Books.

1. Imagine that an uncle has offered to give you any three books named in the book reviews. Select three that you would like. Write a letter, naming the three, and explaining why you prefer them to any others.

#### VII. Building an Office Library. By Edward Earle Purinton.

1. Give a series of directions for the best use of a school or local library.

#### VIII. The News of the Week.

1. Give a full account of the various steps that have been taken toward peace.
2. Explain the present military situation on all the battle fronts.
3. Point out the most interesting results of the recent elections.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Conditions Precedent to Peace—"Force Plus Diplomacy," "A Coalition Congress," "Freedom of the Seas," "Our Terms to Germany," "Terms of the Austrian Armistice," "Story of the Week."

1. Show by an analysis of the events of the last four months that "The supreme triumph . . . has been brought about by . . . the military genius of Foch and the diplomatic genius of Wilson."
2. Why did "the half-million men at Salonica remain idle for two years"? How does the editorial writer account for the Austrian collapse?
3. "Every European country has met the emergency of the Great War by a suspension of party politics," etc. Will this condition continue now that armistice has been declared? Study the returns of the American election. Do these returns indicate a continuance of party truce?
4. In what two respects did the Allied Conference alter the American terms? Why will the President accept the first alteration? Why can he not accept the second? What do you think of the solution of the dilemma proposed by the editorial writer?
5. Compare the terms of the Austrian armistice with that laid upon the Germans. In what respect do they agree? Where do they differ?
6. Why did the Allies insist upon the surrender of the Trentino, Istria and Dalmatia? What will probably be done with these territories when peace is finally declared?
7. What progress in political reorganization is observable in Germany? In Austria-Hungary? In the lands further east?

#### II. Italo-American Relations—"A Talk with the King of Italy."

1. Why was Mr. Holt especially interested in the views of the King of Italy? Why did the King wish to talk especially about the United States?
2. Has the United States done anything to help Italy save herself from her hereditary enemy Austria?
3. What impressions of the present King of Italy do you get from this article?

#### III. How the War Is Being Fought—"Why Not Liberty Motors with British Wings?" "Under the Evening 'Hate,'" "The Great Adventure."

1. What lessons in aeroplane efficiency can be gathered from Mr. Driggs's article?
2. From your reading of these articles give a description of (a) the artillery duels which are incident to modern warfare, (b) the work done by the aviators, (c) the work done by the balloonists, (d) the activities of the infantrymen, (e) the work of the medical corps and various other types of relief organizations.

#### IV. The Development of Motor Transportation—"For Better Highway Transportation," "A New Highways Transport System."

1. What is the cause of the variance in efficiency in railroad transportation and highway transportation referred to in the first paragraph of Mr. Eustis's article? What remedies does he suggest?
2. Do you know of any efforts to establish "systems of cooperating trucking organizations" in your community?
3. "Municipal officials are forever planning and inaugurating new traffic regulations, etc. Does the new highways transport system suggest a better way of handling modern highway transportation problems?"

#### V. Business Efficiency—"Building an Office Library."

1. Can you give other examples of business success similar to that which the author describes in the story of James Bell?
2. Why do the National City Bank, John Wanamaker and the National Cash Register Company find it profitable to maintain libraries?
3. What, according to the author, are the steps which should be taken in building up a business library? How should such a library be run? What benefits will accrue?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## THE LAST SHOT

WITH THE AMERICAN FIRST ARMY, Nov. 11.—Amid the golden glow of the sun shining thru breaking mists and casting upon the uncleared battle field a light that seemed like a halo the soldiers of the American army found today the true glory of war—Peace.

At 11 o'clock this morning they fired their last shot, and the world's greatest war ended in the world's greatest victory.

For most of them, muddy and dog-tired in body and spirit, it came as something unnatural, almost incredible. They stood up in their trenches and cold, wet fox holes—stretched themselves, looked about in wonderment and beheld another wonder, as amid the mist, so close often that they could be hit with a stone, other figures stood up, too, and stretched themselves. They were gray-clad figures, who were enemies and now are—what?

Today has brought many things to the world that one may not guess. But not yet are our men delirious with joy, or given themselves over to jubilation. There was cheering and here and there some rocket flares were fired, while many a boy in khaki slapped another on the back and said: "Well, I guess the old guerre is fini."

It has not yet come over them with all its force that the young lives they had taken in their hands every day are safe with all that safety to young lives means, and that there is an end of the horror unspeakable and of the weariness and hardship—that once again after four years all's right with the world.

Once that idea does come their faces will turn in but one direction—toward home and those who love them and have shared them for the world's greatest cause, and whose faces they thought never to see again. For them peace will mean but one thing—home.

What a series of unforgettable pictures these boys of ours saw on this day of days when the world laid down its arms: pictures of No Man's Land, where men walked upright in the daylight, where men in khaki met men in gray, to swap souvenirs and laugh the strange, short laugh that men laugh whose lives have been given back to them; of a battery of guns that had peered forth death, now silent; of French towns bright with suddenly blossoming flags of red, white and blue after four years of mourning, but above all of the faces of true friends as they looked at each other and said: "Well, we came thru it, didn't we?"

It came differently at different parts of the long line that the Americans now hold. There was a place near Sedan where the New Yorkers of the 77th Division faced the Germans across the Meuse. There was Stenay, where the Americans picked their way across the flooded river, entering and capturing the town at the very moment when the fighting ended.

There was the country east of the Meuse

where until almost the last moment the Americans were fighting heroically. There was the swampy country near St. Mihiel, where they waited in the trenches for an hour and then walked out into No Man's Land.

Everywhere it was the same, in one respect: there was the same sudden and profound silence as the hour struck and the

guns ceased for the first time their terrible chorus that for four years has never ceased from the North Sea to the mountains of Switzerland.

Coming into Buzancy as dusk fell last night there was an air of expectancy everywhere in the crowded streets of the town that the German had marked for his own. Troops were pouring thru—battered, weary troops with a warworn look, but marching with an easy step as if they knew what was coming.

It was the Rainbow Division that got to the outskirts of Sedan, the veterans of 175 solid days in the trenches, and of every big battle in which the Americans have been engaged.

Going up the road toward the Meuse and Stenay next morning we passed more troops marching. This time it was another division no less famous than the Forty-second—the First Division—first in France, first to fight, and by a great chance it happened that we passed the men of the Sixteenth Infantry.

The Sixteenth had just received the news and were cheering as men cheer who know what the war meant in agony and bloody sweat. Some of them were waving their muddy rifles high overhead.

Farther down the road was a little wood where was crouched the long, varicolored snout of a six-inch rifle, the crew of which were cleaning out the barrel. "We fired the last shot at 10:55," they said. It was Battery C of the Fifty-sixth Coast Artillery, formerly at Fort H. G. Wright, New York. Lieut. Harry C. Carpenter, of Norwich, N. Y., pulled the lanyard for their last shot.

Of course there will be a thousand claimants to the honor of having fired the last shot of the war for the American army.

As we passed more and more guns we heard the reason for the heavy artillery fire of the night before. It was that our guns were firing as many shells as possible so as to give the Boche as much discomfort as they could before the war ended.

The farther we went the stronger became the impression of what the end of the war meant.

Stenay itself was a remarkable transformation from despair to happiness. Before one tiny shop stood a little French child, scarcely four years old, waving a hand to the splendid helmeted soldiers who were passing. One broad shouldered man stepped from the line, took the child in his arms and held her high in the air, with an ecstatic smile such as fathers only smile.

"I've got kids of my own," he said, answering a question, "and now I know I'll see them again." He is Private A. C. Larsen, of Minneapolis.

And so we finally passed on thru the French towns, all rejoicing, to Bar le Due, bright with lights for the first time in many hundreds of nights, in whose streets the French soldiers and people cried: "La guerre est finie!" and then were silent, as if they feared it were not true.

### PEACE!

*A conglomerate of people of all nations and all moods thronged thru the streets of New York—buffeted by the surges of the crowd, showered by impromptu confetti and cascades of ticker tape, deafened by horns and whistles, hoarse from cheering*

# The Independent

WITH WHICH IS INCORPORATED  
**HARPER'S WEEKLY**

## WHOM THE GODS WOULD DESTROY

Reprinted from the Independent of August 10, 1914

**A**NCIENT history closed at midnight of July 31, 1914. The monstrous war with which modern history begins will end as the big and little wars of the old days did. This is hard to realize now, but the sooner those men upon whom will fall the duty of shaping a new order of things begin to think about their problem, the better it will be for all concerned.

There will be some accounts to be settled after peace is declared, and the biggest one will be that which Enlightenment has against Medievalism.

Whatever causes of strife may have been lurking in the minds of the peoples of Europe, they would not have massed and exploded in this demoniac war without the agency of the Head Devils. Race differences there are. Conflicting national interests there are. The growth of populations already dense, and looking for new opportunities for enterprize and livelihood, has been disturbing economic equilibrium. Religious antagonisms have fostered hatred. But none of these things by itself, nor all of them in combination, would have made war if the consuming vanity, the monstrous egotism and the medieval-mindedness of the absolute monarchs had not been thrown into the scale.

When the work of devastation is done there will be left the stricken, sobered peoples. Every family will have lost father or son, husband or brother. Resources will have been swept away. Industry will be paralyzed. Farms will have been stripped, villages, towns and cities desolated. But fortitude and courage will be left, and men will set themselves about the task of building a new civilization.

They will not be tolerant then of pious hypocrites asserting divine right, and claiming to be viceregents of God. They will not be tolerant of taxes for the wanton expenditure of royal families. They will not deprive themselves of the necessities of life to enrich the manufacturers of artillery and powder. They will cross these items from their ledgers, and turn their attention to the creation of a social order under which men and women who are content to dwell peaceably on their own reservations can enjoy liberty and pursue happiness.

Whom the gods would destroy they first make mad. Mad with the lust of power, drunk with their own egotism, the Head Devils have signed their own doom. Their days are numbered. The monarchs must go and they will.

### THE MONARCHS MUST GO

AUGUST 10, 1914

#### THESE HAVE GONE

NOVEMBER 15, 1918

Nicholas, Czar of all the Russias, abdicated.  
Constantine, King of the Hellenes, abdicated.  
Ferdinand, Czar of the Bulgars, abdicated.  
Boris, Czar of the Bulgars, abdicated.  
Wilhelm, Prince of Albania, absconded.  
Yuan Shih-Kai, Emperor of China, abdicated.  
Francis Ferdinand, Austrian Archduke, assassinated.  
Friedrich August, King of Saxony, dethroned.  
Adolf Friedrich, Grand Duke of Mecklenburg-Strelitz, dethroned.  
Friedrich Franz, Grand Duke of Mecklenburg-Schwerin, abdicated.  
Ernst Ludwig, Grand Duke of Hesse, dethroned.  
Friedrich August, Grand Duke of Oldenburg, dethroned.  
Ernest August, Duke of Brunswick, abdicated.  
Heinrich XXVII, Prince of Reuss, abdicated.  
William Ernst, Grand Duke of Saxe-Weimar, abdicated.  
Leopold IV, Prince of Lippe-Detmold, abdicated.  
Wilhelm II, King of Wurttemberg, abdicated.  
Friedrich of Waldeck-Pyrmont, abdicated.  
Edward of Anhalt, abdicated.  
Friedrich Wilhelm, Crown Prince of Prussia, renounced claims to throne.  
Charles, Emperor of Austria, King of Hungary and Bohemia, abdicated.  
**WILHELM II, GERMAN EMPEROR, ABDICATED.**

GENERAL HAIG, COMMANDING BRITISH ARMIES

## FROM PRUSSIANISM TO BOLSHEVISM

THE long expected and oft despaired of event has come, the culmination of the war. Germany is in revolution. Kings, princes and dukes have scuttled like cottontails to cover. Sovereigns have been replaced by soviets. A Socialist sits in Bismarck's chair and little Baden has displaced arrogant Prussia as the ruling state of the empire. Last week the Wittelsbachs of Bavaria were claiming the right to succeed the Hohenzollerns in the imperial power. This week the Wittelsbachs are themselves dispossessed of regal rights. A Munich journalist rules in Bavaria, where once reigned a King Ludwig whose megalomania drove him mad. Among the men now at the head of affairs there is scarcely a *von* to be found. Their names are not in *Wer ist's?* Their portraits are not on sale by the press photographers. The German Empire is under entirely new management.

The Kaiser has discovered that he is not ruler by divine right, but by the will—or at least the willingness—of the people. "The German people shall be the freest people in the world," said the Kaiser. Quite possibly, but not by his decree. It was rather President Wilson who gave the signal for the revolt when in his note of October 14 he declared that he would never make peace with the present Government of Germany and added: "It is within the power of the German nation to alter it."

The first act of His Excellency Comrade Scheidemann on entering upon the Ministry of the Interior was to order the Kaiser's portrait off the wall. His next act was to order the Kaiser off the throne. Both orders were promptly obeyed. An urgent message was handed to the German Emperor announcing that Philipp Scheidemann would call at noon for his abdication. The Kaiser shivered and signed. The Crown Prince wept and signed. Then they took the train for Holland. At noon Scheidemann called—with a company of soldiers—and the document was ready for him. It was as short shrift as the Austrian ultimatum gave Serbia in 1914.

Thus was shattered the divinity that doth hedge about a king. Germany has been the chief stronghold of royalty. There have been more hereditary rulers in Germany than in all the rest of Europe, and of all the rest most had German rulers. The Czar of Russia, for instance, was sixty-three sixty-fourths of German blood.

The participation of America brought new issues into the war. Most prominent among them were these three, the overthrow of autocracy, the freedom of the seas, the league of nations. These had not been specified previously in the peace aims of the Allies and had been little heard of in their discussions. Since they have been raised and reiterated by the President they have gradually gained in favor in Europe, tho they are not yet regarded as so important as they are in America. We sum up the situation by saying that the governments associated with ours in the war are dubious about the third, opposed to the second and not at all keen about the first. But the first of the President's three points has been won, the second is not hopeless and the third is promising.

The average American instinctively personified his opponent. To his mind the primary aim of the war was to "Down the Kaiser!" and free his people forever from the curse of kings. But one might read page after page of the letters in the *London Times* on war aims without finding a reference to it, unless indeed it were in deprecation of the President's effort to arouse the German people to overthrow their rulers. When one throne trembles it shakes the rest and those who are satisfied with their sovereign naturally do not want him to suffer for the sins of the others. The downfall of the Czar was greeted with great enthusiasm in America, particularly by the million or more of refugees who had fled to this country from his tyranny. It would indeed have been difficult to have gained the hearty

support of the American people for the war if it had meant fighting on the side of the Czar for the preservation and extension of his dominion. But the monarchical powers were alarmed at the revolution in Russia, not merely because it meant the loss of their largest ally and of their extensive investments, but because it endangered their own institutions. They would have welcomed a transformation of the autocracy into a constitutional monarchy just as Americans would have welcomed its transformation into a federal republic. But it is impossible to set limits to a revolution in advance and Russia went much farther and faster than any of her friends would have wished. It must be admitted that Russia is just now in a worse state than under the Czar's regime and also more of a menace to her neighbors. Bolshevism is evidently a highly contagious disease. It may become pandemic like the Spanish influenza. So far no remedy for it has been found except to let it run its course in the hope that the patient may have a strong enough constitution to survive. The German and Austrian authorities, having assisted in disseminating the germs of Bolshevism in Russia, have been in terror lest it should spread in their own borders as at last it has. They kept the prisoners returning from Russia in a political quarantine until they were thought to be free from its pernicious influences, but this precaution was not sufficient to keep it out. Recently it was discovered that Tavarish Joffé, the Bolshevik Ambassador at Berlin, was sowing seditious literature from the vantage point of the capital. According to the American Consul at Sofia the collapse of Bulgaria was largely due to the ferment of Bolshevism, and we hear the same of Austria. The Sisson documents showed that Scheidemann aided the establishment of Bolshevism in Russia and now he is getting a return for his money.

The German revolutionists have obviously taken lessons from the Russian. They have adopted that novel and powerful weapon, the soviet, or local council of workmen's, soldiers', sailors' and peasants' delegates. It is this institution that has maintained the Bolshevik regime in spite of its external and internal enemies. We have heard repeatedly that the Bolsheviks could not possibly hold out many weeks, yet now a year after they seized power in Russia they seem stronger than ever. They have driven the Czechoslovaks from the Volga and are said to be regaining the Ukraine since the German troops are being withdrawn.

If now a soviet republic should be established in Germany it would fraternize with the Russian and a new kind of *Mittel-Europa* combine erected, that to the Allies might seem as threatening as the Pan-German scheme which they have just foiled. So far the soviet machinery seems to have slipped into place with remarkable smoothness and we may hope that so disciplined, orderly and educated a people as the Germans may avoid the reign of terror under which Russia now writhes. If they do not it will not be Germany alone that will suffer, but the world as well. Lord Milner has recently warned the British of the danger of too great demoralization of Germany and *The New Europe* puts this fear into plain words:

If Germany were to go the way of Russia, then all the talk of indemnities and punishment and reparation would be futile; we should be like a man who is prevented by the sudden death of his antagonist from executing the vengeance and carrying out the punishment on which he has so long been brooding.

It may be that the Allies and Americans who are to watch on the Rhine during the next few months will be in the position of the Germans in 1871 who stood by with idle arms while the French bombarded Paris, burned the Tuileries, tore down monuments and shot their leading citizens. The Germans looked on at this spectacle first with delight, then with amazement and finally with alarm. So now we, altho not disposed to be sympathetic with the Germans, would not wish to see them sink like Russia into chaos and red ruin. Behind the Great War there looms the specter of a Greater War, the war of classes, in which man fights his

GENERAL DIAZ, COMMANDING ITALIAN TROOPS

neighbor, in which there is no line dividing the foemen, in which there are no neutrals and no non-combatants, in which there is no restraint of discipline and no chivalry, no Hague rules and no mercy, a war that means not merely the conflict of civilizations but the destruction of civilization itself, the engulfing of the world in a flood of anarchy. It was with a solemn warning against this that the President closed his first peace speech.

*The peoples who have just come out from under the yoke of arbitrary government and who are now coming at last into their freedom will never find the treasures of liberty they are in search of if they look for them by the light of the torch. They will find that every pathway that is stained with the blood of their own brothers leads to the wilderness, not to the seat of their hope. They are now face to face with their initial test. We must hold the light steady until they find themselves.*

## THE PEN OF DEMOCRACY VERSUS THE SWORD OF AUTOCRACY

Woodrow Wilson—Matthew 5:9.

Wilhelm Hohenzollern—Matthew 26:52.

### WHY NOT THE PRESIDENT?

**W**E see no reason why President Wilson should not attend the peace conference if he thinks he should. It is his duty to be wherever his country needs him most and certainly there is no place where his personal influence would be more effective in maintaining American interests and ideals and promoting a durable peace. He is premier as well as president and deserves to be by the side of Lloyd George and Clemenceau at Brussels, if that is to be the place of peace. It would be embarrassing, of course, if the conference should last many weeks or if Congress should be in session at the time, but even then the President might well go across for a week or two in the crisis of the conference.

Mr. Wilson is by temperament a "direct action" man in the true sense of the word. He violated precedent—for those with short memories—when he appeared before Congress personally instead of sending a message from the other end of the avenue, but nobody can now deny that he gained in effectiveness. It was a silly superstition that a president must not step outside the United States. Roosevelt broke it when he went to Panama and Taft when he went hunting in Canada, and the present incumbent may well disregard the tradition for a more important purpose. Now that the U-boats are disarmed a voyage to Paris is not much longer or more dangerous than a trip to California. Premier Hughes of Australia and Premier Massey of New Zealand have gone from the antipodes to England and spent months there. Why should the President be the only interned premier?

### LEST WE FORGET COMMON SENSE

**T**HE explosions of joy that hailed the ending of the war were undignified and uncamouflaged, but they were spontaneous and sincere. They ran into lawlessness, but perfect self-control in such an hour was not to be expected. The repression had been unprecedented and the release was terrific.

The orgies of the day may be pardoned, but if the return to the emotions and the behavior appropriate to peace is to be marked by indulgence, excess, extravagant expenditure and a reckless throwing off of all sense of obligation, the latter state of human society will be worse than the former. Indications have multiplied that an irresponsible element, which has grown suddenly and fabulously rich while the general population has uncomplainingly endured hardships, and men on the battle front have borne unimaginable sufferings, is thoughtlessly eager now to make up for lost time

in wanton expenditure and display. This selfish element cannot be expected to listen to reason, and sober-minded men and women must exert themselves to the utmost to discountenance unworthy example, and to hold the great body of the people to decency and common sense.

In England and in France the energies that have been devoted to war will now be turned in full strength upon the huge and immensely difficult task of social reorganization. The old order is gone in those democratic countries as surely as it is gone in Russia and the central European nations. The intelligent French and the hard-headed British perfectly understand what has happened and realize what must be done. Ancient privileges of the Briton must go by due process of law and the land of England must be made over to the people. In its essential features the program of the Labor party will be put into enactment. Political rights alone will no longer fill out the democratic scheme. The wage-earners must own more. They must have a more adequate income. They must bear economic as well as political responsibility. They must enter more fully into the larger opportunities of life. They must be able to enjoy health and freedom. They must have education. The full meaning of this larger democracy is understood quite as well by British land-owners and mill-owners as it is by the wage-earners. Whatever may be true elsewhere, in England at least there will be no more flouting of selfish wealth in the face of misery. In France the democracy already created will be cherished and safeguarded.

Thruout the civilized world the masses of toiling men and women are restive. More than that, they are excited by appeals by revolutionaries and promise by leaders of class struggle to destroy the social system of which monarchy and courts were the symbol, while wealth and capitalistic power remain the substantial realities. The empires are broken to pieces; now unjust privileges must be made an end of, but the future of civilization depends upon the way in which the transformation shall be accomplished. Anarchy and violence will throw the world back into economic chaos and unimaginable misery. Patient reconstruction alone can save the priceless fruits of knowledge, discovery, invention and toil, and pass them over to a larger ownership.

Any conduct that needlessly inflames the irritated and envious elements of the population will be criminal in the deepest meaning of the word. Failure to adhere to the attitude of unselfishness and obligation so splendidly shown under the pressure of war will be criminal negligence. Every conscientious citizen of the United States, man or woman, should resolutely face the task of so amending and improving the economic scheme of things as to remove all just grounds of bitterness. Childish expedients and patch-work mending here and there will not do. Things must be made right as nearly as the imperfect intelligence and the more or less clumsy efforts of finite men can make them so. Every problem must be approached with open mind and a sincere desire to be both fair and practical. This is no time for rainbows and Utopias. It assuredly is no time for dogmas, traditions, and reliance upon merely repressive measures. It is a time for honest intention and common sense.

## WHO SAW NOT; YET BELIEVED

THE saddest thought of the war is that those who gave their lives to lift a nightmare from the world could not live to see and share the victory. That they died matters little, for sentence of death has been passed by nature on every one of us, but how unendurable to die unknowing of the fruits of their sacrifice, to die during one of the dark hours of the war fearing that a century of tyranny and slavery awaited the world of the living, to die fearing that their death was vain, and efficient deviltry creatable! We must not forget that less than six months before final victory, victory as decisive as the world has

ever known, many were urging with very plausible reasons that our enemies could never be beaten. The darkest hour was just before the dawn.

Our consolation lies in the fact that most of those who died were men of great heart and strong faith. They did not think that the will of God could be permanently defeated by a broken treaty, a torpedo, a piece of rugged ground, a cold winter or a treacherous Balkan prince. Behind all accidents and the varying fortunes of war lay their solid conviction that whether it took one year or ten, one war or ten, the struggle could have but one end. Humanity would never permit perfidy and cruelty to be rewarded by a secure success. We have seen and we believe; more blest are they who did not see and yet have believed.

## THE GREAT PEACE

THE defeat of Germany is an event of colossal significance for the Christian church. Once more it has been proved that those who take the sword shall perish by the sword. Once again it has been demonstrated that mechanism is no match for spirit. Military preparedness even of the Prussian variety cannot in the long run triumph. We see, as if by a flash of lightning, that righteousness exalts a nation, and that sin is a reproach to any people.

Whatever criticism of the Christian church may have been expressed at the beginning of the war for its failure to ward off this horrible catastrophe, and whatever abuse may have been heaped upon it in the course of the war because of its inability to say or do anything to stay the plague of destruction, will now be speedily forgotten, for all men of open eye see clearly that there is an immense work to be done, and that it is the church of God which must accomplish it. The generals and admirals have performed a noble and indispensable service. But another piece of work no less necessary and even more difficult, remains to be performed, and this work must be done largely by the organized forces of religion.

The war has left us a bruised and bleeding world. The guns are silent, but one can hear the blood still dripping. The nations are in sore need of healing. It is one of the sovereign functions of the Christian church to heal.

The war has left us with an impoverished world. Billions of wealth have been consumed. All the nations are weighted down with debts which it will require the patient toil of generations to pay. Men everywhere must have fortitude and self control. It will not be easy to adjust these burdens equitably to all classes of the people. The Christian church must plead for justice and mercy for every man.

The war has left us with an embittered world. Fires have been kindled which will not soon go out. Seeds have been sown which will bring forth harvests later on. Chasms have been worn deep which it will be difficult to bridge. The Christian church is intrusted with the message of compassion and forgiveness, of tenderness and reconciliation. Never has a wider door been opened for the ministers of Goodwill.

The war has left us a hopeful world. The human heart cannot be crushed. Hope is a flame which cannot be extinguished. Everybody believes that a better world is possible, and that we ought to have it. We can have it only by paying the price. There must be work and sacrifice. Wise and fearless leadership is needed in the pulpit. Victory is not yet certain. If the world goes on drilling with bayonets and guns, then the war has not been won. Prussianism has triumphed. If we are still to have nations in arms, then the abomination of Potsdam abides. It is for the Christian church by the united efforts of her ministers and laymen, to insist upon the creation of a League of Nations thru whose tribunals all international disputes shall be brought to the arbitrament of reason.

CHARLES E. JEFFERSON,  
Pastor of the Broadway Tabernacle.

# THE ARMISTICE

Full Text as Signed on  
November 11, 1918

## I. MILITARY CLAUSES ON WESTERN FRONT

One—Cessation of operations by land and in the air six hours after the signature of the armistice.

Two—Immediate evacuation of invaded countries: Belgium, France, Alsace-Lorraine, Luxembourg, so ordered as to be completed within fourteen days from the signature of the armistice. German troops which have not left the above-mentioned territories within the period fixed will become prisoners of war. Occupation by the allied and United States forces jointly will keep pace with evacuation in these areas. All movements of evacuation and occupation will be regulated in accordance with a note annexed to the stated terms.

Three—Repatriation beginning at once to be completed within fifteen days of all the inhabitants of the countries above enumerated (including hostages, persons under trial or convicted).

Four—Surrender in good condition by the German armies of the following war material: Five thousand guns (2500 heavy, and 2500 field), 25,000 machine guns, 3000 minenwerfers, 1700 airplanes (fighters, bombers—firstly, all of the D 7's and all the night bombing machines). The above to be delivered in situ to the allied and United States troops in accordance with the detailed conditions laid down in the note (annexure No. 1) drawn up at the moment of the signing of the armistice.

Five—Evacuation by the German armies of the countries on the left bank of the Rhine. The countries on the left bank of the Rhine shall be administered by the local troops of occupation. The occupation of these territories will be carried out by allied and United States garrisons, holding the principal crossings of the Rhine (Mayence, Coblenz, Cologne), together with the bridgeheads at these points of a thirty kilometer radius on the right bank and by garrisons similarly holding the strategic points of the regions. A neutral zone shall be reserved on the right bank of the Rhine between the stream and a line drawn parallel to the bridgeheads and to the stream and at a distance of ten kilometers from the frontier of Holland up to the frontier of Switzerland. The evacuation by the enemy of the Rhinlands (left and right bank) shall be so ordered as to be completed within a further period of sixteen days, in all, thirty-one days after the signing of the armistice. All the movements of evacuation or occupation are regulated by the note (annexure No. 1) drawn up at the moment of the signing of the armistice.

Six—In all territories evacuated by the enemy there shall be no evacuation of inhabitants; no damage or harm shall be done to the persons or property of the inhabitants. No person shall be prosecuted for offenses of participation in war measures prior to the signing of the armistice. No destruction of any kind shall be committed. Military establishments of all kinds shall be delivered intact as well as military stores of food, munitions, and equipment, not removed during the time fixed for evacuation. Stores of food of all kinds for the civil population, cattle, etc., shall be left in situ. Industrial establishments shall not be impaired in any way and their personnel shall not be removed.

Seven—Roads and means of communication of every kind, railroads, waterways, main roads, bridges, telegraphs, telephones, shall be in no manner impaired. All civil and military personnel at present employed on them shall remain. Five thousand locomotives and 150,000 wagons in good working order, with all necessary spare parts and fittings, shall be delivered to the associated powers within the period fixed in annexure No. 2, and total of which shall not exceed thirty-one days. There shall like-

wise be delivered 5000 motor lorries (camions automobiles) in good order, within the period of thirty-six days. The railways of Alsace-Lorraine shall be handed over within the period of thirty-one days, together with pre-war personnel and material. Further, the material necessary for the working of railways in the countries on the left bank of the Rhine shall be left in situ. All stores of coal and material for the upkeep of permanent ways, signals, and repair shops shall be left in situ. These stores shall be maintained by Germany in so far as concerns the working of the railroads in the countries on the left bank of the Rhine. All barges taken from the Allies shall be restored to them. The note, annexure No. 2, regulates the details of these measures.

Eight—The German command shall be responsible for revealing within the period of forty-eight hours after the signing of the armistice all mines or delayed action fuses on territory evacuated by the German troops and shall assist in their discovery and destruction. It also shall reveal all destructive measures that may have been taken (such as poisoning or polluting of springs and wells, etc.). All under penalty of reprisals.

Nine—The right of requisition shall be exercised by the allied and United States armies in all occupied territories, subject to regulation of accounts with those whom it may concern. The upkeep of the troops of occupation in the Rhineland (excluding Alsace-Lorraine) shall be charged to the German Government.

Ten—The immediate repatriation without reciprocity, according to detailed conditions which shall be fixed, of all allied and United States prisoners of war, including persons under trial or convicted. The allied powers and the United States shall be able to dispose of them as they wish. This condition annuls the previous conventions on the subject of the exchange of prisoners of war, including the one of July, 1918, in course of ratification. However, the repatriation of German prisoners of war shall be regulated at the conclusion of the preliminaries of peace.

Eleven—Sick and wounded who cannot be removed from evacuated territory will be cared for by German personnel, who will be left on the spot with the medical material required.

## II.—DISPOSITION RELATIVE TO THE EASTERN FRONTIERS OF GERMANY

Twelve—All German troops at present in the territories which before belonged to Austria-Hungary, Rumania, Turkey, shall withdraw immediately within the frontiers of Germany as they existed on August 1, 1914. All German troops at present in the territories which before the war belonged to Russia shall likewise withdraw within the frontiers of Germany, defined as above, as soon as the Allies, taking into account the internal situation of these territories, shall decide that the time for this has come.

Thirteen—Evacuation by German troops to begin at once, and all German instructors, prisoners, and civilians as well as military agents now on the territory of Russia (as defined before 1914) to be recalled.

Fourteen—German troops to cease at once all requisitions and seizures and any other undertaking with a view to obtaining supplies intended for Germany in Rumania and Russia (as defined on August 1, 1914).

Fifteen—Renunciation of the treaties of Bucharest and Brest-Litovsk and of the supplementary treaties.

Sixteen—The Allies shall have free access to the territories evacuated by the Germans on their eastern frontier either thru Danzig or by the Vistula in order to

convey supplies to the populations of those territories and for the purpose of maintaining order.

## III.—CLAUSE CONCERNING EAST AFRICA

Seventeen—Evacuation by all German forces operating in East Africa within a period to be fixed by the Allies.

## IV.—GENERAL CLAUSES

Eighteen—Repatriation, without reciprocity, within a maximum period of one month, in accordance with detailed conditions hereafter to be fixed of all interned civilians, including hostages (persons?), under trial or convicted, belonging to the allied or associated powers other than those enumerated in Article Three.

Nineteen—The following financial conditions are required: Reparation for damage done. While such armistice lasts no public securities shall be removed by the enemy which can serve as a pledge to the Allies for the recovery or reparation for war losses. Immediate restitution of the cash deposit in the national bank of Belgium, and in general immediate return of all documents, specie, stocks, shares, paper money, together with plant for the issue thereof, touching public or private interests in the invaded countries. Restitution of the Russian and Rumanian gold yielded to Germany or taken by that power. This gold to be delivered in trust to the Allies until the signature of peace.

## V.—NAVAL CONDITIONS

Twenty—Immediate cessation of all hostilities at sea and definite information to be given as to the location and movements of all German ships. Notification to be given to neutrals that freedom of navigation in all territorial waters is given to the naval and mercantile marines of the allied and associated powers, all questions of neutrality being waived.

Twenty-one—All naval and mercantile marine prisoners of the allied and associated powers in German hands to be returned without reciprocity.

Twenty-two—Surrender to the Allies and United States of all submarines (including submarine cruisers and all mine-laying submarines), now existing, with their complete armament and equipment, in ports which shall be specified by the Allies and United States. Those which cannot take the sea shall be disarmed of the personnel and material and shall remain under the supervision of the Allies and the United States. The submarines which are ready for the sea shall be prepared to leave the German ports as soon as orders shall be received by wireless for their voyage to the port designated for their delivery, and the remainder at the earliest possible moment. The conditions of this article shall be carried into effect within the period of fourteen days after the signing of the armistice.

Twenty-three—German surface warships which shall be designated by the Allies and the United States shall be immediately disarmed and thereafter interned in neutral ports or in default of them in allied ports to be designated by the Allies and the United States. They will there remain under the supervision of the Allies and the United States, only caretakers being left on board. The following warships are designated by the Allies: Six battle cruisers, ten battleships, eight light cruisers (including two mine layers), fifty destroyers of the most modern types. All other surface warships (including river craft) are to be concentrated in German naval bases to be designated by the Allies and the United States and are to be completely disarmed and classed under the supervision of the Allies and the United States. The military armament of all ships of the auxiliary fleet shall be put on shore. All vessels designated to be interned shall be ready to leave the German ports. [Continued on page 267]

# THE WAR THUS COMES TO AN END

President Wilson's Address to Congress on  
November 11, 1918

**T**HE war thus comes to an end; for, having accepted the terms of armistice, it will be impossible for the German command to renew it. It is not now possible to assess the consequences of this great consummation. We know only that this tragical war, whose consuming flames swept from one nation to another until all the world was on fire, is at an end and that it was the privilege of our own people to enter it at its most critical juncture in such fashion and in such force as to contribute, in a way of which we are all deeply proud, to the great result. We know, too, that the object of the war is attained; the object upon which all free men had set their hearts; and attained with a sweeping completeness which even now we do not realize. Armed imperialism such as the men conceived who were but yesterday the masters of Germany is at an end, its illicit ambition engulfed in black disaster. Who will now seek to revive it?

The arbitrary power of the military caste of Germany which once could secretly and of its own single choice disturb the peace of the world is discredited and destroyed. And more than that—much more than that—has been accomplished. The great nations which associated themselves to destroy it have now definitely united in the common purpose to set up such a peace as will satisfy the longing of the whole world for disinterested justice, embodied in settlements which are based upon something much better and more lasting than the selfish competitive interests of powerful states. There is no longer conjecture as to the objects the victors have in mind. They have a mind in the matter, not only, but a heart also. Their concerted purpose is to satisfy and protect the weak as well as to accord their just rights to the strong.

The humane temper and intention of the victorious governments have already been manifested in a very practical way. Their representatives in the Supreme War Council at Versailles have by unanimous resolution assured the peoples of the Central Empires that everything that is possible in the circumstances will be done to supply them with food and relieve the distressing want that is in so many places threat-

ening their very lives; and steps are to be taken immediately to organize these efforts at relief in the same systematic manner that they were organized in the case of Belgium. By the use of the idle tonnage of the Central Empires it ought presently to be possible to lift the fear of utter misery from their oppressed populations and set their minds and energies free for the great and hazardous tasks of political reconstruction which now face them on every hand.

For with the fall of the ancient governments, which rested like an incubus on the peoples of the Central Empires, has come political change not merely, but revolution; and revolution which seems as yet to assume no final and ordered form, but to run from one fluid change to another, until thoughtful men are forced to ask themselves, with what governments and of what sort are we about to deal in the making of the covenants of peace? With what authority will they meet us, and with what assurance that their authority will abide and sustain securely the international arrangements into which we are about to enter? There is here matter for no small anxiety and misgiving. When peace is made, upon whose promises and engagements besides our own is it to rest?

Let us be perfectly frank with ourselves, and admit that these questions cannot be satisfactorily answered now or at once. But the moral is not that

there is little hope of an early answer that will suffice. It is only that we must be patient and helpful and mindful above all of the great hope and confidence that lie at the heart of what is taking place. Excesses accomplish nothing. Unhappy Russia has furnished abundant recent proof of that. Disorder immediately defeats itself. If excesses should occur, if disorder should for a time raise its head, a sober second thought will follow and a day of constructive action, if we help and do not hinder.

The present and all that it holds belongs to the nations and the peoples who preserve self-control and the orderly processes of their governments; the future to those who prove themselves the true friends of mankind. To conquer with arms is to make only a temporary conquest; to conquer the world by earning its esteem is to make permanent conquest. I am

confident that the nations that have learned the discipline of freedom and that have settled with self-possession to its ordered practice are now about to make conquest of the world by the power of example and friendly helpfulness.

The peoples who have but just come out from under the yoke of arbitrary government and who are now coming at last into their freedom will never find the treasures of liberty they are in search of if they look for them by the light of the torch. They will find that every pathway that is stained with the blood of their own brothers leads to the wilderness, not to the seat of their hope. They are now face to face with their initial test. We must hold the light steady until they find themselves. And in the meantime, if it be possible, we must establish a peace that will justly define their place among the nations, remove all fear of their neighbors and of their former masters, and enable them to live in security and contentment when they have set their own affairs in order. I, for one, do not doubt their purpose or their capacity. There are some happy signs that they know and will choose the way of self-control and peaceful accommodation. If they do, we shall put our aid at their disposal in every way that we can. If they do not, we must await with patience and sympathy the awakening and recovery that will assuredly come at last.

# THE STORY OF THE WEEK

## The Signing of the Armistice

The armistice putting a stop to the war with Germany was signed at five o'clock, French time, in the morning of November 11. Hostilities ceased at eleven a. m., which is the equivalent of six a. m. New York time.

The armistice bears the signatures of Field Marshall Ferdinand Foch of the French Army and Admiral Sir R. E. Wemyss of the British Navy on the one side, and on the other Mathias Erzberger, Count Alfred von Oberndorff, General H. K. A. Winterfeldt and Naval Captain von Salow. Admiral Sims was present unofficially at the first meeting.

The German plenipotentiaries, coming from La Capelle arrived at the French front at nine o'clock of November 7, and their automobiles with the curtains drawn were escorted to the Château Francfort, where the delegation spent the night. Next morning they were taken to Rethondes in the forest of Compiègne, where Foch awaited them in his special train. The leader of the delegation, Dr. Erzberger, speaking in French, announced that the German Government had been advised by President Wilson that Marshal Foch was qualified to communicate the Allies' conditions. The Marshal then read the terms slowly in a loud voice. Erzberger asked to be allowed to send the terms by courier to Spa, and that until a reply was received hostilities be suspended in the interests of humanity. Foch granted the former request but refused the latter.

The courier on his return was delayed by the continuation of the bom-

bardment and did not reach the German Headquarters at Spa until ten a. m., November 10. The Kaiser, who had held back the armistice delegation from going to the front until he was overruled by Hindenburg, was appalled when he read the terms and bitterly reproached the supreme army command with having misled him. But Hindenburg insisted upon the necessity of immediate compliance, and the courier was sent back with this message.

The German delegation reappeared in Foch's car at one a. m., Monday, and the next four hours were occupied in discussing the terms. Slight alterations were made in eighteen of the thirty-five articles as a result of arguments of the German delegates that in their original form the stipulations were impossible or undesirable. For instance, the time for evacuation and delivery of cars was extended from twenty-five to thirty-one days; the German troops from Russia are not to be withdrawn immediately but when the Allies decide that it may safely be done; "all submarines now existing" was substituted for the original demand for "160," probably because there were not so many left; and in response to the demonstration of the food experts accompanying the delegation that ships and cars were necessary to prevent famine and anarchy, a special clause was added to Article 25 providing for provisionment. Foreign Secretary Solf sent a special plea to the President for a mitigation of the blockade which otherwise "would cause the starvation of millions of men, women and children." Premier Clemenceau in

communicating the armistice to the Chamber of Deputies said that the taking away of all locomotives and 150,000 cars would embarrass Germany's means of provisioning and that "In this first hour we must come to her aid. We do not make war against humanity but for humanity." President Wilson spoke to the same effect before Congress. We publish the President's address and the revised armistice.

## The Kaiser Abdicates

When the Kaiser reorganized the Government last month to meet the demand of the President that it be made democratic he called into the coalition cabinet as Secretaries of State the Socialist leaders, Ebert and Scheidemann, conferring upon them the usual title "Excellency" but only during their period of office, not as is customary, for life. On the afternoon of November 7 the executives of the Majority Socialists of the Reichstag placed before the Imperial Chancellor, Prince Max, demands for the relaxation of police control, for freedom of assemblage, for a larger representation of Socialists in the Cabinet and for the abdication of the Emperor and Crown Prince. If a satisfactory answer was not given by noon on Friday, the following day, the Socialists would withdraw from the Cabinet. The Kaiser at first refused, declaring that he would not desert his country in this time of trial.

On Saturday morning the Socialist party announced its separation from the Government and declared a Social Republic. A general strike was ordered. The workmen left work, paraded

## WHERE GERMANY ACKNOWLEDGED HER DEFEAT

The famous palace at Versailles built by Louis XIV just outside Paris became during the war the seat of Allied councils. It was here that General Foch and the other representatives of the Allies drew up the terms of the armistice prefacing the German surrender. This photograph of the palace shows the famous statues of its gardens protected by straw from enemy bombardment.

#### WHERE THE ORDER TO "CEASE FIRING" FOUND OUR MEN

In the hot pursuit of the retreating German army during the last days of the war there was no time to dig trenches or build fortifications. The men dug individual shelters as best they could—"foxholes," one correspondent calls them. This photograph from a low-flying aeroplane shows some of these burrows dug by French and American infantrymen

the capital and fraternized with the soldiers in the barracks. Three thousand insurgent sailors were on the march to Berlin. At noon Scheidemann and Ebert went in a military automobile, accompanied by troops, to the Chancellor, who told them that their demands had been granted. The Socialist leaders then rode back to the Reichstag in time to meet the procession of soldiers and workingmen and proclaimed the overthrow of the Hohenzollern dynasty and the victory of the people.

The act of abdication was signed by the German Emperor on Saturday morning, November 9, just after the receipt of an urgent telegram from Herr Scheidemann, which the Kaiser is reported to have read with a shiver. He then said: "May it be for the good of Germany. Let us not lose hope in the future," and signed the document. Next the Crown Prince, "crying like a baby," it is said, signed an act of renunciation of claims to the throne. The signature took place at the General Headquarters in the presence of Field Marshal Hindenburg and of the other officers and of the Emperor's private servants.

The ex-Kaiser and his party then took automobiles for the Dutch frontier, which they reached at Eysden on Sunday morning. At the frontier the Dutch sentries refused to let the party enter until the customs officials arrived at seven and inspected the ten automobiles. So the former Emperor had to wait half an hour at the Eysden station, and he was seen pacing the platform in the uniform of a German general. Crowds of Belgian refugees who had collected around the station looked at him and shouted "A bas Guillaume l'assassin!" When the train arrived, the ex-Emperor went on board and changed to civilian attire and was conveyed to the castle of Amerongen at Maarn, which belongs to the Count van Bentinck.

#### The Red Flag at Kiel

The revolutionary movement that had long been fomenting in northwestern Germany broke out in a naval mutiny at Kiel, the chief naval port and outlet of the Kaiser Wilhelm Canal. A similar mutiny occurred a year ago, but was quelled and promises made of better food and treatment. It is rumored that the cause of the rising this time was the real or suspected intention of the Government to order the whole fleet, including the returned submarines, to take to the open sea in a last desperate attempt to destroy the British navy. On Sunday, November 3, the sailors on board of the battleship "Kaiser" hauled down the war flag and raised the red flag in its stead. The officers attempted resistance with their revolvers, but the captain and other officers were killed. The battleship "Schleswig-Holstein" was seized in like manner and the revolt spread to most of the other vessels in the harbor. Since

the mutineers had possession of the wireless they were able to keep in touch and plan further operations. The garrison of Kiel refused to march to the harbor and the sailors declared that they would sink the ships if they were attacked. During the night four companies of infantry were brought in to put down the revolt, but three of them went over to the mutineers and the fourth was disarmed. Cavalry was then ordered in, but was stopped and turned back a mile from Kiel by marines with machine guns.

On the following day all the workmen of Kiel struck and seized the arsenal, munition works, railroads and tramways. A procession of marines, soldiers and workingmen, 20,000 strong, marched thru the city with bands and red flags to the prison and released the men who had been arrested for disobedience of orders. A Council of Sailors, Soldiers and Workmen, or to use the Bolshevik word, a "soviet," was formed and assumed the government of the city. Admiral Souchon, the Governor of Kiel, was arrested but released when he agreed to the demands of the Council. These demands called for better treatment of the men and the abolition of the salute and of all distinctions of fare between officers and men.

Fired by the example of Kiel, similar risings took place in the neighboring naval bases of Wilhelmshaven, Cuxhaven, Borkum and Helgoland, and later in the greatest of German ports, Hamburg and Bremen. In these and other cities the Workmen's and Soldiers' Councils came into power without long delay or serious opposition.

#### The Socialist Republic of Germany

Within two days after the proclamation of the republic from the steps of the Reichstag by Philipp Scheidemann, the Socialists had obtained control of most of the twenty-six states of the empire. In nearly all the leading cities soviets,

#### THE GREAT WAR

November 7—German delegates apply to Foch for armistice. Naval mutiny at Kiel.

November 8—Bavarian republic proclaimed. King of Württemberg abdicates.

November 9—Republic of Poland formed. American steamer "Saetia" sunk by mine off Maryland. Battleship "Britannica" torpedoed at Gibraltar. Alfred Ballin, of Hamburg-American Line, suicide.

November 10—Kaiser flees to Holland. Socialist Ebert becomes German Chancellor.

November 11—Germany signs armistice 5 a. m. Hostilities cease 11 a. m. Emperor of Austria abdicates.

November 12—Allied fleet passes thru Dardanelles to Constantinople. Reds seize Helgoland.

November 13—All German rulers dethroned. Soviets control German cities. Bolshevik movement spreading to Sweden, Norway, Holland and Switzerland.

or councils of soldiers and workingmen, have superseded or supervise the administration. The fleet is under the red flag, so are the ports and naval bases, including Helgoland. Field Marshal von Hindenburg, "in order to avoid chaos," has asked the Cologne Council to send delegates to headquarters. Besides the army and navy the Socialists have now control of the press. The Wolff News Bureau, formerly the semi-official organ of the Imperial Government, is now sending out socialistic wires and wireless. The conservative *North German Gazette* has changed its name to the *International*. The *Lokal-Anzeiger*, which used to be the favorite paper of the Kaiser, appeared as *The Red Flag*.

Prince Maximilian of Baden, who was called by the Emperor to become Chancellor of the reformed Government, has become a sort of regent, while Frederick Ebert, ex-harness maker and leader of the Reichstag Socialists, assumes the office of Chancellor. The new cabinet comprizes Scheidemann, Landsberg, Haase, Barth, Liebknecht and Dittmann. Part belong to the majority Socialists, who have in the main supported the Government in the Reichstag since 1914. The others belong to the Independent Socialists, who have opposed the war from the beginning. No bourgeois is included, so it is evidently to be a strictly working class rule, as in Russia. Elections are to be held by equal, direct and secret ballot without distinction of sex and upon the principle of proportional representation.

Herr Ebert in an interview gave his views as follows:

The German people are victorious and the old, cankered rule of the Hohenzollerns, Wittelsbachs, Welfens, etc., is overthrown. Germany has completed her revolution. Prince Max, who formally resigned when the Kaiser abdicated, handed the Government over to me. In reality, we had full power in our hands before the representative of the old power gave it over.

These conditions had been gradually developing in Germany since the beginning of the war, and would have been completed after the conclusion of peace. But now the most skeptical must recognize that monarchism and imperialism are finished forever in Germany.

The German republic will not know any greater honor than that of working for peace. A constitutional national assembly of the German people's republic will institute a Government which will represent the people's will as far as it is humanly possible.

Our victory is almost bloodless, I could even say easy and complete. That the old forces will once again strive for power appears impossible to me. Germany's future state form is a republic, and the free German people's state will be happy in feeling that it is a free nation, with equal rights as a member of the League of Nations.

The Socialist authorities everywhere urge the maintenance of order. Looting is condemned and punished. In most places the transition was effected peaceably and the former officials have generally accepted the new regime and are working in harmony with it. At Berlin there were a few collisions between the troops and the people in which a few were killed, and the new Government publicly express its regret for the affair. The kings and grand dukes of the various German states

THE MAN WHO SIGNED THE ARMISTICE FOR GERMANY

Matthias Erzberger headed the delegation sent by Germany under flag of truce to ask for peace terms and signed the official acceptance of the armistice dictated by General Foch

Press Illustrating

THE LEADER OF SOCIALISTIC GERMANY Frederick Ebert, upon whom falls now the task of creating a new German government from the ruins of Kaiserism and the chaos of revolution. Herr Ebert was appointed one of the two Socialist secretaries of state in the German cabinet when the Kaiser reorganized it to meet President Wilson's demands about a month ago; he was named regent when Wilhelm II abdicated in favor of his grandson and he is now titled Chancellor of Germany. Herr Ebert is one of the most popular of German Socialist leaders. He was born in the famous university city of Heidelberg, where his father was a working tailor. He was for a considerable time editor of the Bremen *Burger Zeitung*.

have either abdicated or been dethroned or have express a willingness to abide by a decision of the people. The Berlin Workmen's and Soldiers' Council has abolished the censorship, declared freedom of religion and political amnesty, and established an eight-hour day. The Independent Socialists demand the punishment of Admiral von Tirpitz and others responsible for the atrocities and prolongation of the war.

#### The Revolution in Bavaria

Bavaria, which was set up as a kingdom by Napoleon in 1805, has never become reconciled to Prussian rule. The Crown Prince of Bavaria, in command of the right wing of the armies in France, has been the rival of the Crown Prince of Prussia, in command of the left wing, but neither has distinguished himself as a military genius. In August Prince Rupprecht of Bavaria left the army, accusing the Kaiser, Ludendorff and Hindenburg with responsibility for the German defeats, and later the Bavarian Government notified the Imperial Government that if an armistice was not negotiated immediately Bavaria would withdraw her troops and conclude a separate peace.

On November 7 the Socialists of Munich called a public meeting, at which thousands were present and resolutions passed demanding a republic, an armistice, an eight-hour day and prohibition of future wars except for national defense. On the following day an assemblage at the Diet Palace decreed the deposition of the Wittelsbach dynasty. The administration was taken over by a council of workmen, soldiers and peasants organized after the model of the Russian soviet by Kurt Eisner. He is a prominent Socialist and journalist, the author of "Psycopathia Spiritualis" and other books on sociology, and formerly the editor of the Berlin Socialist daily *Vorwärts*. He was born in Berlin in 1867. Up to a fortnight before he became the ruling power in Bavaria he had been in prison because he had published in his paper, the Munich *Post*, the statement that Germany had begun mobilizing her troops as early as July 28, 1914.

#### The Revolution in Austria

On November 11, the same day that put a stop to the war in France, Kaiser Karl of Austria issued the following act of abdication:

Since my accession I have incessantly tried to rescue my peoples from this tremendous war. I have not delayed the re-establishment of constitutional rights or the opening of a way for the people to substantial national development.

Filled with an unalterable love for my peoples I will not, with my person, be a hindrance to their free development. I acknowledge the decision taken by German Austria to form a separate state. The people has by its deputies taken charge of the government. I relinquish every participation in the administration of the state. My warmest wishes are that an internal peace will be able to heal the wounds of this war.

(Signed) CHARLES

(Countersigned) LAUMASCH

This brings to an end the reign of the house of Hapsburg, which has last-

ed for 645 years. As the Holy Roman Empire broke to pieces in the last century, so now both parts of the Dual Monarchy have been shattered into finer fragments. The German sections of Austria have become a republic and will seek to join the republic of Germany. Northern Tirol, which is outside the limit of the evacuated area prescribed by the Austrian armistice, has been occupied by Bavarian troops.

The Bohemian republic seems to be firmly established, with Prague as its capital. Prof. T. G. Masaryk, who has been head of the Czecho-Slovak National Council at Washington, has been chosen President of the new republic by a conference of delegates from the eight political parties of Bohemia held at Geneva, Switzerland.

An independent Polish republic has been declared at Warsaw and lays claim to Galicia in Austria. But the Ukrainians or Ruthenes claim the eastern half of Galicia by right of race and they are now fighting the Poles for it. On account of this conflict Paderewsky, the head of the Polish nationalists in America, has withdrawn from the Mid-European Union which was formed in the United States to bring together all the oppressed nationalities of Austria-Hungary and the Balkans, and in which Ruthenes and Poles have hitherto been represented.

Closing Scenes of the War

The Allied and American armies pushed forward with greater energy than ever in the last days of the war, while on the other hand the enemy managed his retreat with skill and steadiness in spite of desertions and demoralization. The Belgians delivered Ghent before the halt was called. The British had the peculiar satisfaction of reaching Mons, where "their contemptible army," as the Kaiser called it, first met the foe. The French got to the Belgian border. The Americans on the last day crost the Meuse near Sedan and took the town of Stenay, where the Prussian Crown Prince had his headquarters. The Meuse had been flooded by damming the river and Stenay was strongly fortified and defended by machine guns aided by artillery on the hills in the rear. In Mezières and Mousay the civilian population suffered terribly from the phosgene gas with which the Germans drenched the towns. If the people stayed above they were in danger from the high explosive shells. If they sought refuge in the cellars they were liable to be suffocated, since they had no gas masks.

The firing was kept up till the last minute, but promptly at eleven o'clock a sudden silence fell upon the lines, which for more than four years had been under incessant fire. Orders had been issued absolutely forbidding all intercourse after the termination of hostilities under penalty of the "severest disciplinary measures" for violation of the order. But in spite of this fraternization took place spontaneously at various points of the line. Within a few minutes after the last shots had been fired groups of mingled khaki and feldgrau could be seen in No Man's

Central News  
THE GERMAN REPUBLIC PROCLAIMED BY PHILIPP SCHEIDEMANN

From the steps of the Reichstag Herr Scheidemann read the proclamation of success in the German revolution and asked the people's support of the new government. It was Herr Scheidemann who sent to the Kaiser the telegram demanding his abdication. He was one of the two Socialist secretaries of state appointed by Wilhelm II a month ago.

Land and an active exchange of tobacco for German postcards and *Gott mit uns* buckles was begun. As one American explained it: "You see, the war is over and we just wanted to find out what they think about it." They found out that the Germans were heartily sick of war. The American outposts for a long time after the armistice were bothered by Germans who persisted in trying to surrender to secure rations.

According to the report of November 13 the total of American casualties was 76,258, distributed as follows:

ARMY	
Killed in action (including 398 at sea) .....	13,312
Died of wounds .....	5,059
Died of disease .....	5,280
Died of accident and other causes... ..	1,450
Wounded in action .....	39,904
Missing in action (including prisoners) .....	7,227
Total .....	72,232

MARINES	
Deaths, all causes .....	1,364
Wounded .....	2,428
Missing in action (including prisoners) .....	234
Total .....	4,026

It is estimated that there are some 30,000 casualties yet to be published. At the time when hostilities closed the American army numbered 177,309 officers and 3,332,981 men. The overseas force numbered 2,008,931. The expenditure in the American army from the beginning of the war to date has been over \$22,000,000,000.

Reduction of the Army

The moment the armistice with Germany had been signed, orders were issued by the President stopping draft calls and turning back all accepted registrants who had not actually been inducted into the army; and men who are not yet nineteen years old, or who are more than thirty-six, and have not yet been called, are told they need not answer their questionnaires. So far as practicable, all men also who have not yet completed their training will be immediately discharged and returned to civilian life. The duties of the local draft boards will continue, however, and the drafting machinery will remain in readiness to function quickly should some emergency require its action. The War Department announced that on November 11 the total strength of the army was 3,764,677 men, of whom 2,200,000 had been sent to France, Italy or Russia.

Calls for the Navy and the Marine Corps are not affected by the order cited above, and no immediate steps will be taken toward demobilizing any part of the naval forces, nor any cessation in carrying on the program of naval expansion. It is believed that soldiers and sailors who have seen long service abroad will be returned soon, and replaced by drafts from the million or more men who are in camp in the United States. Secretary Daniels has promised that he will do what he can to set free young men who want to quit the navy for some substantial reason, and especially those who desire to begin or complete a college education.

United War Welfare Work

The "drive" for raising \$250,000,000 to sustain the combined welfare work in the army of the seven principal organizations outside of the Red Cross, began on November 11. It was almost swamped that first day in the torrent of jollification for "peace with victory" that swept over the land, but its agents struggled bravely in the welter of hilarity. Every tried method of raising money was used, and some new ones, as, for example, the utilization of athletics and sport—even a pugilistic ring of unheard-of proportions. All the leaders of the movement put forth pleas and facts to counteract the impression that the apparent end of fighting has made the getting of this fund needless. Cardinal Gibbons, Dr. John R. Mott and other influential promoters insist that the vast work to be done by the Y. M. C. A. and its co-

laborers here and abroad before the demobilization of our military forces requires all the money asked for, and more. The first twenty-four hours' work is reported to have yielded more than \$23,000,000.

**Non-Essential Industries Relieved** An immediate result of the stoppage of fighting is an order from the War Industries Board giving permission to many industries whose output has been restricted, to resume in part their normal manufacture and sale of goods. A list of forty-two classes of articles is given, of which a 50 per cent resumption of manufacture is allowed—all of them machinery or articles required in agriculture, business, or daily household use. The surplus of steel on hand, and the diminished demand by the Government, permits a partial resumption of building and repair work of the most necessary character; and the Fuel Administration grants the use of coal, hitherto forbidden, for making lumber, cement, brick, etc., for building purposes. In this respect, however, the order applies mainly to railroads, irrigation projects, and similar public utilities; to milling and food production; and to such new buildings as are required by hospitals, schools and the like, and costing in the aggregate not more than \$25,000. Large building operations must wait, but the board proposes to lift all restrictions as fast as circumstances allow.

**Foreign Trade in Future** The point most emphasized in the deliberations of the very distinguished body of men who met in New York at the fifth session, on November 8, of the National Foreign Trade Council, was the need of continuing to build ships. The program of the Shipping Board, if completed, would produce a merchant navy of 14,000,000 tons. Experience showed that this

amount would suffice; and that American shipping might be maintained was to be expected from the fact that now 385,000 men in the United States were trained to shipbuilding, whereas two years ago hardly 50,000 such workmen were available.

A policy of economic warfare on Germany hereafter was condemned, on the ground that if a satisfactory peace were concluded it would be needless. That an international agreement might be effected at the peace conference that should enable the working out of uniform and equal conditions upon all vessels alike, was greatly to be desired. At present the laws that required American vessels to maintain larger crews and to pay higher wages than is the case in foreign vessels necessarily subject American vessels to such disadvantages in competition with foreigners as to make it difficult, if not impossible, to continue business. Unless a proper maritime policy was adopted by our Government in the near future, in the opinion of the council, it is absolutely certain "that these newly constructed American vessels will not remain in operation under the American flag, and that the American merchant marine, rehabilitated with vast expenditure of capital and effort as a war emergency measure, will again be dissipated under the operation of inexorable economic laws."

**Prices and Economy** Prices of commodities thruout the United States still mount steadily. The War Department states that the cost of the army ration has increased from 33.03 cents in 1917 to 40.46 cents at present; and this cost has increased by 350 per cent during the last twenty years. Financiers and publicists are becoming anxious, seeing that the banks are threatened with a harmful credit inflation. This anxiety is the theme of the last monthly report of

the Federal Reserve Board. Figures are presented showing that, at the Federal Reserve Banks themselves, loans and investments have risen from \$552,649,000 on June 22, 1917, to \$2,154,832,000 on October 14, 1918. In the same period the percentage of cash held against liabilities has declined from 71.6 per cent to 51.1 per cent.

This situation is not owing to shrinkage in the reserve of gold, which, indeed, has increased somewhat during the year, but exists "because of undue or disproportionate expansion of the credit structure, which the gold reserve of the nation is required to support, in consequence of the inadequate saving by the people."

Normally bank credit exerted in the channels of commerce goes not beyond the productive processes on which it is based; and compensatory transactions largely cancel one another from day to day, so that only a small margin remains to be settled in cash. But, says the report, when the credit structure of the community is enlarged by the extension of bank loans not accompanied by a corresponding increase in production, and the proceeds are not employed in making or exchanging commodities, there is no means of permanently canceling or digesting such outstanding credits except one—their use for the purchase of the securities against which the credits were extended, notably, in our present situation, government bonds. The report concludes:

Probably the feature of the present financial situation of the country which most requires correction is this increase in disposition on the part of the public to rely too largely upon the banks as sources from which to obtain the necessary funds for use in financing the requirements of the Government. In order to provide for the taking up of additional loans when offered, it will be inevitably necessary that the public address itself with greater earnestness to the problem of saving and applying its income to public requirements.

**Economy in Clothing** To enforce economy in materials and labor, and to prevent unduly high prices for wearing apparel, the War Industries Board has found it necessary to impose definite restrictions on articles of clothing and their commercial distribution. In explaining to the dry goods men that this must be done, Chairman Baruch called on their National Association to appoint a committee of experts to aid him; this was done, seven experienced dry goods merchants constituting a board to arrange details. Standard grades and standard prices will be formulated. The vast business of making women's ready-made suits and robes and hats will be most affected. A practical beginning has been made in shoes, where the number of styles has been reduced from 350 to 150. If one wants a fancy shoe it must be made to order by an individual shoemaker, who may charge what he pleases. Manufacturers are restricted to fixed maximum prices for their goods in three classes, and may use only certain kinds of leather. The retailer must display his

#### PRESIDENT OF THE NEW CZECHO-SLOVAK REPUBLIC

In the center of this group is Dr. Thomas G. Masaryk, who led the organization of the Czechoslovak Republic of eleven million people and has just been elected its President. Dr. Masaryk was formerly professor of philosophy at the University of Prague, and he has been since 1915 president of the Czechoslovak National Council. The United States and the Allied Nations have now formally recognized the Czechoslovak Republic. Its legation building in Washington is shown in the background of this photograph. At the left of the group is Charles Pergler, American delegate and chargé d'affaires and at the right is Captain V. S. Hurban, the military leader

Central News  
**TAKING OVER THE GERMAN WIRELESS  
BASE AT ZEEBRUGGE**

When the Allies captured the stronghold of Germany's undersea warfare they put their own experts in charge of the huge wireless station there and found it in good order. These men are testing the receiving apparatus

agreement to abide by the stipulated prices. These standardization measures are expected to eliminate much waste as well as to prevent profiteering. In regard to determination of prices Mr. Baruch has laid down the principle that a "fair price is a price something like the normal profits in normal times."

**Feeding the World** President Wilson has directed Herbert Hoover to go to Europe as soon as possible to take charge for this Government of the organization of measures for the food relief of the liberated peoples. Mr. Hoover will take with him a company of expert assistants, and will be accompanied by Mr. Hurley, chairman of the Shipping Board, to arrange for transportation of the relief, partly by the use of ships recovered from Germany. The work in this country will be conducted by an executive board under Mr. Hoover's control. The program contemplates the furnishing of food not only to France and Belgium, but to the liberated populations of southern Slavic lands, to Austria, and even to parts of Germany; and it will be Mr. Hoover's first task, in cooperation with Allied agencies, to determine local necessities and organize the means of conveying subsistence to the civilian inhabitants of the various famine-stricken regions. He has estimated that in northern Russia alone 40,000,000 persons have little chance of living thru the winter.

While Australia, Argentina and other countries will be drawn upon, the chief supply must come from the United States, and Mr. Hoover has issued a

most earnest appeal for the strictest table economy on our part in order to save enough to keep life and at least a little energy in two hundred million persons until next spring, when they may begin to maintain themselves. As an idea of what this call means, the State Department announces that during the past four years the American Relief Commission, with the support of the Allied Governments, has sent to the ten million people in the comparatively small territory hitherto occupied by the invading armies, more than 600 cargoes of food, comprizing 120,000,000 bushels of breadstuffs and over 3,000,000,000 pounds of other foodstuffs, besides 20,000,000 garments, the whole representing an expenditure of nearly \$600,000,000. . . . In addition to this, some \$350,000,000 worth of native produce has been financed internally in Belgium. That the maintenance of this relief commission has been critically necessary is evidenced by the fact that in the same time and under the same conditions the population of Serbia is estimated to have diminished 50 per cent in number and that of Poland 25 per cent, whereas the population of Belgium, altho suffering great privations, is still intact.

At the same time we are reminded that the United States has, as an incident of the situation, become altogether the richest country in the world, and the one best situated to increase in wealth. An interesting summary has been published by the Government, showing the increase over normal in exports of foodstuffs by the United States since it became the food reservoir for the world on account of the war:

	3-year pre-war average	1916-17, fiscal year	1917-18, fiscal year
Beef products, lbs.	186,375,372	405,427,417	565,462,445
Pork products, lbs.	996,230,627	1,498,302,713	1,691,437,435
Dairy products, lbs.	26,037,790	351,958,336	590,798,274
Vegetable oils, lbs.	332,430,537	206,708,490	151,029,893
Grains, bu.	183,777,331	395,140,238	349,123,235
Sugar, lbs.	621,745,507	3,084,390,281	2,149,787,050

**Virgin Islands Surveyed** The United States Census Bureau has published a report on the Virgin Islands that contains much information of interest. The three important members of the group, St. Croix, St. Thomas and St. John, have a total area of 132 square miles, to which about fifty lesser islets add a small space of useful land. The population in November, 1917, was 26,051, of which hardly 2000 are whites, and about 4600 of mixed blood. Nearly the whole population dwells on St. Croix and St. Thomas, and more than half in the three large towns; yet of the 84,781 acres on the three islands almost 70,000 are cultivated, and crops, more than four-fifths of which was sugar cane, were raised last year to the value of \$522,606. In addition, livestock existed to the value of \$582,921. Manufactures consist almost wholly of sugar and bay rum, the value of these products for 1917 being \$1,330,892. The fisheries prove to be of much more consequence than had been antici-

pated, the catch amounting to an annual value of about \$50,000. The report gives much general information as to soil, climate, social conditions, and business opportunities, and is accompanied by maps and illustrations. A curious fact is that, despite the Danish history of the islands, the speech of the people is English.

How important these islands were regarded in Europe strategically is shown by a recent incident. The agent of the Alien Property Custodian lately seized at St. Thomas the wharves and warehouses of the Hamburg-American Steamship Company, despite a pretended sale to Americans; and they were found to include buildings of such enormous solidity, and fitted with such unusual facilities, that their ultimate use as a naval station was evidently in view. It is believed that they will now be applied to the purposes of a naval base for the United States.

**FOOD ADMINISTRATOR IN AMERICA AND EUROPE**

Herbert Hoover, who headed our relief mission in Belgium before America entered the war and who returned to this country in 1917 to organize and direct the Food Administration of the United States, is now going to Europe to take charge of the food relief of starving civilians in Serbia, southern Austria and Montenegro and of the people freed from German domination in Belgium and northern France. Plans have already been put into effect to use the shipping released from military demands to send large quantities of foodstuffs to the army depots abroad

#### REPUBLICANISM SPREADS AROUND THE WORLD

*In all of the countries marked black upon the map monarchy has now been abolished and the area is expanding daily. To this territory might be added the United Kingdom and the self-governing dominions of the British Empire, where the rule of the sovereign is merely nominal and the will of the people is the law of the land*

## THE FRUITS OF VICTORY

BY WILLIAM HOWARD TAFT

EX-PRESIDENT OF THE UNITED STATES, PRESIDENT OF THE LEAGUE TO ENFORCE PEACE

**T**HE Great War is ended. It will change the map of Europe and the world. As the Christian Era divides the ancient and the modern world, so this war will be a new point of departure in human history.

The victory clinches the moral responsibility of nations and of peoples. It exalts right over might and makes right might. Peoples and leaders may frequently fall away from the ideal of national morality set by this war. But never again will either avow that there is no morality for nations.

The war ends the power of monarchs and dynasties, the divinity that has hedged a king is gone forever. Peoples are to rule.

The war has made the world democratic. Whether it has made it safe depends on the peoples who govern. Democracy is a great boon. It makes for the happiness and welfare of the people, but its best results are only available to a people practised in self-restraint, intelligent enough to know their own real interest and valuing properly liberty regulated by law. We must expect, therefore, many mistakes in some of the new republics to be set up.

This war, in giving birth to so many new governments without assured stability, increases the chances of international friction. Unless the great powers

who have won the war and who are responsible for these nations organize the world to maintain peace among them, war will show its grisly head again.

**T**HE complexity of the adjustments for which the treaty of peace must provide makes inevitable the continuance of the present league of allied nations and its enlargement. The treaty must provide joint machinery with which to interpret and apply the terms of peace.

It must set up commissions to assess indemnities. It must create tribunals to hear contending peoples as to boundaries, rights of way and rights of access to navigable rivers and the sea.

It must continue its powers of mediation and conciliation long after a treaty has been framed and signed to settle disputes between new fledged countries and restrain their jealousies and ambitions. They will not be perfect.

Their human frailties will still be present. The great powers must maintain a joint military force to see to it that the terms of the treaty are complied with by the Central Powers.

Bolshevism may interfere with such compliance. If so, we must stamp out Bolshevism without hesitation. We cannot become responsible for the bloody massacre of all but the lowest

elements of the population of Germany and Austria as they were for the awful tragedy in Russia.

We may need a combined military force to enforce decisions of the joint tribunals and commissions under the treaty against the new governments. Here then we shall have for the Central Powers and the recently born republics a machinery to maintain peace among them and to compel the administration of justice.

This will be a league to enforce peace for half the world or more. What reason can be given for not extending the operation of this league to settle questions between the great allied powers themselves and between the other nations of the world? None.

If the war is to achieve its highest purpose, need for such a league is imperative.

Let us hope that the people of the United States will demand that their representatives unite with those of our allies in framing it. The peoples of England, France and Italy long for it as the only security worth having against recurrence of war.

Shall our people lag behind? Organized labor of the United States says "No."

So will the other groups of our nation say when they realize that the issue presses and the need for them to speak is at hand.

*New York City*

# GERMANY MUST PAY THE PRICE

BY JAMES W. GERARD

AMERICAN AMBASSADOR TO GERMANY 1913-1917

**S**PURS and high boots at sea! Rather ridiculous: but at the opening of the Kiel week the Kaiser used to enter the harbor drest like a stage Rupert of Hentzau, standing alone on the upper bridge of his yacht. His silver breastplate and helmet shining in the sun, his hand on the hilt of his enormous sword, he condescendingly received the cheers of the sailors of yachts and warships and the plaudits of the humble multitudes of the shore. And no one laughed. No one dared. There were prisons for those guilty of *lèse majesté*.

Now his mighty armies, broken in flight, the red flag of revolution flapping from his palace tower and from the balcony from which he told the crowds that "before the leaves have fallen from the trees you will be back in your homes," his country ruined, William Hohenzollern, in the civilian's clothes that became him so ill, is a fugitive in Holland. His German Gott has deserted, weary, perhaps, of condoning so many crimes.

For these crimes must no one answer? We want to make war impossible. The best way to make war impossible is to punish personally those who wage it.

It is not necessary to number the acts which have turned the world against Germany. The list is long. Direct crimes comprize the murders by U-boats and Zeppelins against the laws of war, the judicial murder of Captain Fryatt, the slow murders of the prison camps, and the torturing murder of poison gas. Among the indirect murders are the carrying off into slavery of the workingmen of Belgium and the women and girls of northern France, many of whom died from overwork, starvation and exposure. Then come the accusing ghosts of the literally millions of Poles, and Rumanians, Serbians and Armenians, starved, beaten, shot and hanged by the faithful allies of Germany or by their troops under German officers.

What a miserable finish! Ten muddy motors cross the Dutch frontier carrying the huddled hope of autocracy. But why did he not know how to die? A last charge, perhaps at the head of the Hussars of Death! But now his coward flight only adds one more problem to those who will gather at the table of peace.

© Underwood & Underwood

Judge Gerard, our recent Ambassador to Germany, author of "My Four Years in Germany" and "Face to Face With Kaiserism"

Before the representatives of the Allies meet at that table the Allies must beware of the German revolution.

At a prize fight, when the crowd loses faith in the genuineness of a contest, loud cries of "Fake!" "Fake!" are

Left and Center by their silence approved.

German victory was thus proclaimed to mean the placing of crushing indemnities on all the nations who dared to oppose the German dream of world conquest.

At the least, Germany, under whatever flag, must pay the price of reparation.

The fate of the world and its people will be decided by men such as the ex-college professor Woodrow Wilson, the editor Clemenceau and Lloyd George, the little attorney from Wales. What a contrast to those proud nobles who, a little over a hundred years ago, filled feudal Vienna with their gold coaches and their lackeys and dealt with peoples as the personal property of the divinely anointed emperors and kings.

We have played a great part in the war; our democratic armies, raised as if by a miracle, turned the tide in France; but we must not forget that the conceit of the Germans, self-christened supermen, did much to turn the world against them, that our brave allies bore for four years war at their doors and that against their line the onrushing might of militarism broke and turned at the first battle of the fateful Marne.

There is a God—and in humility, in thankfulness, we pray that never again may the Beasts of War be loosed upon the earth.

Three generations of Hohenzollerns—the former Emperor of Germany, Wilhelm II, who abdicated in favor of his grandson, and the Crown Prince, now in Holland

*In his enormous contracts for war materials Uncle Sam has tried out many different policies*

## UNCLE SAM—GENERAL CONTRACTOR

BY C. S. RINDSFOOS

There are, in all the realm of business literature, only two important books on the theme of purchasing. One of these is by an engineer—C. S. Rindsfoos—and is used as a text book in the Massachusetts Institute of Technology, in dozens of other educational institutions, and is given to all the purchasing staff of the Quartermaster and Ordnance Corps to read. Mr. Rindsfoos is a Cornell graduate. He was secretary and treasurer for ten years of the Foundation Company, which is doing about \$75,000,000 worth of construction for the Government, and is now one of the three members of a firm doing similar work. In all his work he has been giving special attention to purchase—and to Government methods of purchase

UNCLE SAM has become "The General Contractor." During the past year he has spent, directly and indirectly, on new construction, some one and a half billions of dollars. It is of interest to the public to examine how he has gone about expending this vast sum, thru the private corporations of the country, which are now all "sub-contractors," working for him, "The General Contractor." Has a sound general policy been formulated? Have profits been reasonable? Private work for the time being dead, will any permanent effects result in the relations between the public, on the one hand, and the architect, engineer and contractor on the other, as a result of new construction in the hands of the Government? Or between architect, engineer and contractor? These questions, together with that of the effect on labor of the new order of things, come to mind and seek an answer.

It may be said at once that the Government has had no fixed general policy of awarding construction work, and has none now. It was not strange that, at the outset of the war, the various

departments and bureaus should adopt different policies; but now, a year and a half later, still we find some bureaus pursuing methods diametrically opposed to that of others. Obviously all cannot be right. For instance, the Bureau of Yards and Docks of the Navy Department awards practically all of its work on the so-called lump-sum basis; that is to say, a round sum of money for a given project. Some of its projects are let on the unit-price system, the project being divided into a number of units according to the class of work involved, and bids being received per unit. These unit prices are multiplied by the quantity of each, and the results added together result in a lump-sum bid in the final analysis.

Whichever method is employed, bids are received after due advertisement and if within appropriation, the tender of the lowest responsible applicant is accepted.

The Construction Division of the Army awards practically no work on the lump-sum basis. Neither are contractors selected thru public advertisement. On the contrary, a project having been approved by the General Staff, a request for a contractor is sent to the Emergency Construction Committee of the War Industries Board. This committee has on file a record of a large percentage of the contractors thruout the country. This record shows the personnel, the financial status, experience and organization of each. Any contractor will be listed and rated on application and any contractor is permitted to supplement the

regular questionnaire with photographs of work done, references, or other pertinent data. From this list the Emergency Construction Committee selects one or more firms as best fitted to prosecute the project under consideration, having due regard to the location of the contractor's organization with reference to the work, amount of work on hand at the time, experience in the particular kind of work involved, financial ability to carry the work and record of past performances. The recommendation then goes to the Construction Di-

*The construction of the Hog Island shipyard was one*

ward and made experiments that will have a marked permanent effect after the war

## GENERAL CONTRACTOR UNDSFOOS

vision, which may or may not be adapted to it, tho it is only fair to say the advice of the Emergency Construction Committee is usually followed. The Construction Division then proceeds to award a contract on a percentage basis whereby the Government reimburses the contractor for the entire cost of the work plus a profit. The profit is based on a scale of rates designed to limit the total possible profit and under which the larger the project in cost, the smaller the percentage of profit allowed.

Thus not only do we find different policies in vogue in the bureaus just mentioned, but we find still other methods employed by other governmental agencies. The Engineer Corps and the Treasury Department continue to let work on the lump-sum basis. The Shipping Board Housing Committee has been awarding work on a fixed fee basis predetermined but unaffected by the actual cost of the work. The United States Housing Corporation of the Department of Labor awards work on a fee basis predetermined but increased in size if the work costs less than estimated, the idea being to secure economy by making it possible for the contractor to earn more profit as a reward for skilful management.

Not only are the forms of contract as numerous as the bureaus responsible for them, but the percentage of profit varies likewise. The contracts put out by the Construction Division allow a profit varying from 2 per cent to 7 per cent of the cost, depending on the size of the project. The Shipping Board Housing Committee allows about 4 per cent, while the Labor Department allows from 2 per cent to 4 per cent, depending on the size of the undertaking. What the contractors make out of Navy Yard contracts will never be known. The writer knows of cases all the way up the line from those where the contractors lose money to those carrying profits much above normal.

It is apparent from what has been said that Uncle Sam as General Contractor has not been able to make

up his mind how to choose his sub-contractors nor what form of contract to employ. He is trying all the methods and can settle on none. He selects his construction talent on the competitive and also on the non-competitive basis. Having made his selection he fixes rates of pay which vary from 2 per cent to 10 per cent and more—and he uses every form of contract that has ever been devised.

So much for a lack of policy that cannot go on indefinitely.

Now, can we detect any tendencies that are likely to result in a policy for the future and will the policy be followed in private as well as public enterprise after the war?

From the viewpoint of the contractor nothing is now left which he may sell except his engineering skill and the use of his equipment. The Government fixes the prices of material and labor, controls how much of each he may obtain and where he may obtain it. The Government controls transportation, fixes rates and allots cars for the movement of materials. The Government controls the money market and indirectly determines who may borrow money and at what rates. Therefore the contractor is not much attracted by advertisements for lump-sum bids. In the past he has been a good gambler, but today the odds are too great. He does not care to back his skill against Uncle Sam's power. You may be sure that when the contractor presents a lump-sum tender, either he is irresponsible or else he has added to his bid such a very large item of contingency profit that he cannot lose. In the latter case Uncle Sam pays well indeed for the privilege of forcing the contractor into a form of contract not in harmony with the times.

That the Government has not been blind to the conditions is indicated by the fact that most of its work during the past year [Continued on page 168

Uncle Sam's biggest successful experiments in contract award

People of Lille cheering the Allies victorious

#### SINGING AT THE FRONT

WITH THE AMERICAN ARMIES IN FRANCE, Nov. 11 (2:10 p. m.)—Motor-cycle couriers tore along the roads today shouting: "It's all over, boys!"

Marching columns, tired and mud spattered, were galvanized into new life. They shouted, laughed and sang.

The correspondent saw several doughboys under full packs fox trotting in the middle of the road. The cheers rang from column to column.

In the race back to the nearest cable office the correspondent passed many detachments who had not heard of the armistice. It was easy to tell by their appearance who had heard the news and who had not.

Two words—"It's over"—changed the grim men into laughing boys.

Shortly before 11 o'clock the American gunners stood with watch in hand as the seconds ticked away. They fired right up to the last, saving the shell cases of the final rounds as souvenirs.

Several fourteen-inch naval guns sent their final shells hurling far into the German lines.

Little is now available regarding events at the extreme front lines, where the men are dug in in little "fox holes."

The correspondent sat in a dugout northeast of Verdun when Marshal Foch's order arrived at 10:40 o'clock.

A captain began telephoning feverishly to all the batteries in his sector.

Immediately the fire began to quicken until the fog was pierced by a veritable sheet of flame, the gun flashes melting into one.

As the captain finished reading the order to each battery, faint cheers came over the wire.

Within one minute after the firing had ceased, the bells in war-shattered Verdun began pealing.

Only a few minutes before 11 the Boches fired a few big shells into Verdun. As silence again settled on the streets, after the explosions, laughing and shouting doughboys poured out of the buildings.

American flags were flung from the windows of the ruined buildings. Locomotive whistles screeched, a real American celebration was going strong.

The news spread for miles into the back areas like wildfire. Villages were a-flutter with flags.

#### PARIS BREATHEs AGAIN

PARIS, Nov. 11—France is bearing the good news with the same equable temperament with which she bore the vicissitudes of the last four years. Quiet joy is visible on every countenance, but there is little outward expression of the happiness at the close of the tragedy which has cost two and one-half millions of the flower of her sons.

The French public is turning its attention to the extraordinary events in Ger-

# THE DAY

## How Victory Was Celebrated Thruout the World

many. While a few bands played in the streets and there was much singing of the "Marseillaise," the great crowds in the boulevards paid most attention to the newspaper bulletin boards. Many Parisians remained up until far into the night discussing the news in the cafés.

The authorities had ordered the blueing cleaned from the street lamps and the carés were lit from the arc lamps outside.

For the first time in years the boulevards last night presented an appearance of animation and gayety.

The Latin Quarter of Paris came to life with a bang after four years of churchyard quiet. Students paraded, shouting, singing, waving flags. The war hit the Quarter harder than it hit any other section of Paris, rendering it silent and empty. Today it is as gay as ever, blossoming into new merriment, gayly bedecked in bunting.

The roof of the Bourse almost lifted when the brokers boomed "The Marseillaise."

Every taxi and every other available vehicle was covered with the flags of the allied nations, and went cruising about the streets packed with merry-makers.

The youth of Paris paraded in groups, carrying banners and shouting songs of victory.

The only sad note was inside the homes where womenfolk were weeping when told the war was over, because almost all have at least one whom peace will not fetch home.

#### ALSACE DARES TO CHEER

ZURICH, Nov. 11—Enthusiastic demonstrations were held in Strassburg on Saturday night. France was cheered, notwithstanding the intervention of the mounted police.

Great processions filed thru the streets far into the night, carrying banners on which were inscribed:

"We Want to Be Reattached to France. Our Mother Country."

Alsatian soldiers on leave joined in the demonstration. The Mayor and the German military commander appealed to the people to keep calm.

#### LIGHTS IN LONDON

LONDON, Nov. 11—London celebrated the conclusion of hostilities with a glad heart in cheers that resounded on every side. Shrill notes of girls and children predominated, for sweethearts and brothers and fathers would go over the top no more.

Waving flags and cheering, an enormous crowd prest into Downing Street before noon today, shouting "Lloyd George! Lloyd George!" and sang, "For He's a Jolly Good Fellow."

The War Office was blazoned with flags, the roadway was thick with slow-moving vehicles, all loaded with human freight, packed like sardines, but waving flags and cheering wholeheartedly despite their discomfort.

Toward Buckingham Palace, along The Mall, and down Constitution Hill a great crowd began to converge as soon as the

© Paul Thompson

An all-New York peace parade

news became known. It comprized all classes and ages, generals in staff uniforms, nurses with babies in carriages, American and Colonial soldiers, girls from Government offices, and taxicabs crammed to overflowing with children seated, motor lorries packed with laughing nurses, munition girls, and soldiers, all waving flags, drove up and stopped.

Over the Queen Victoria Memorial the crowd flowed. Small boys perched themselves sacrilegiously on the lap of the Queen herself, a New Zealand infantry man balanced himself on the wings of the great Victory. It was a case of anything or anywhere to get a sight of the Palace forecourt on this day of triumph for the empire.

They cheered, they sang the national anthem, "The Marseillaise," and other songs till the King in naval uniform, the Queen bareheaded, the Princess Mary, and the Duke of Connaught stepped quietly out on the balcony. Cheer after cheer rent the air, flags and handkerchiefs were waved, and the Queen Victoria Memorial became a pyramid of fluttering color as the spectators gave vent to their enthusiasm.

Down below in the forecourt the massed bands of the guards struck up "God Save the King," and the King and Duke came stiffly to salute as 20,000 voices picked up the hymn. It ceased and the crowd cheered again.

There was a moment of pause before the crowd took up "Tipperary," which was sung with a lilt and dash quite different from the weary longing of four years ago, and the solemn strains of "Old Hundred."

But the Allies had to be remembered, too, and once more the King and Duke came to attention as the stirring strains of "The Star Spangled Banner" broke out. This was followed by the French, Belgian and Italian anthems and the hymn, "Now, Thank We Our God." Then with "Auld Lang Syne," the notable gathering came to an end and the King and Queen withdrew with the cheers of the people ringing in their ears.

#### NEW YORK GOES GLORIOUSLY MAD

NEW YORK, Nov. 11—Fifth Avenue saw the wildest spectacle of its history yesterday. Officially, it was a victory parade of the city officials. Practically, it was thirty or forty parades, led by Mr. Average Citizen, with a red, white and blue horn at his lips, a feather duster in his coat, and a hat band which flaunted the words: "I'm going to the Kaiser's funeral."

Like an avalanche, which moves slowly over the country, gathering up every small object which lies along its pathway, so the central parade of the afternoon picked up a conglomerate of men and women of all nations and all moods. French sailors, swinging along arm-in-arm with girls with red, white and blue paper caps, were wedged in between sedate rows of aldermen.

Americau [Continued on page 270]

# The Independent-Harper's Weekly NEWS-PICTORIAL

## ITALY LEADS THE WAY

Austria's signing of the armistice was the signal for the beginning of world wide rejoicing, but the greatest celebration on that occasion was in victorious Italy, which had brought her foe to terms a week before Germany surrendered. Italy's enthusiasm took the form of liberal subscriptions for the inhabitants of the liberated territory. Dispatches to the Embassy in this country told of the Italian Government's work to remedy the conditions in the unredeemed lands of Italy, and that the trains to these regions were crowded with refugees eager to return to their homes. Premier Orlando (photographed below) announced the good news to the Italian people, and in America, the Italian Ambassador, Count V. Macchi de Cellere, said: "It is a victory which cannot fail to be a decisive element in ending the war"

## THE "TIGER OF FRANCE"

Prolonged cheering greeted Premier Clemenceau on the reading of the armistice terms in Paris. The whole city was placarded with posters reading, "Citizens, victory is here—triumphant victory. Let us testify to our infinite gratitude to our grand soldiers and their incomparable chiefs by festooning our houses in the colors of France and of our allies. The day of glory has come. Long live the Republic. Long live immortal France!" The Premier announced that France would concern herself about Germany's food problem, saying, "We cannot let the nation suffer famine. We must endure, ourselves, and at the same time keep our military superiority." He concluded his short talk to the newspaper men with "France has done wonderfully thru four long years"

## "PEACE WITHOUT VENGEANCE"

This was the keynote of the speech made by Premier Lloyd George of Great Britain to his Liberal supporters on November 11. "Are we," he said, "to lapse back into the old national rivalries, animosities, and competitive armaments, or are we to initiate the reign on earth of the Prince of Peace? What are conditions of peace? They must lead to a settlement which will be fundamentally just. No settlement that contravenes the principles of eternal justice will be a permanent one. We must not allow any sense of revenge, any spirit of greed, any grasping desire to override the fundamental principles of righteousness. Vigorous attempts will be made to hector and bully the Government in an endeavor to make them depart from the strict principles of right and to satisfy some base, sordid, squalid idea of vengeance and of avarice. We must relentlessly set our faces against that. A large number of small nations have been reborn in Europe, and these will require a league of nations to protect them against the covetousness of ambitious neighbors. In my judgment, a league of nations is absolutely essential to permanent peace"

## WHAT IS HAPPENING IN GERMANY NOW

Swayed by Bolsheriki socialists the people of Germany are rising in a revolutionary turmoil similar to that begun in Russia a year and a half ago. The "Reds"—revolutionists headed by the Soldiers' Council—have seized control of the German northern fleet and the island fortress Helgoland (photographed above). A supplementary clause of the armistice drawn up by the Allies and signed by Germany provides for Allied occupation of Helgoland if necessary to enforce the naval terms of the armistice

### A SOCIALISTIC BOOMERANG

The German agents who urged on the Russian revolutionists are in somewhat the position now of the man who started a prairie fire to burn his neighbor's crops. The flames are spreading in every direction and the long-denied opportunity to establish a republican government in Germany is being jeopardized now by a riot of anarchy. The revolution started in the naval base at Kiel and seized the wharfs and shipping there, shown in the photograph at the right

### THE WORK OF THE BOLSHIEVIKI

In the revolution that is sweeping thru Germany now is duplicated in many respects the revolution of the Bolshievi in Russia. The photograph above and the similar one at the left of the page show two scenes enacted then: a Russian soldier tearing from the public buildings every trace of royalty, and a Russian prison torn to pieces. In the center of the page is the latest friendly photograph of the dethroned monarchs of Russia and Germany

### THE THREE WAR ADMIRALS OF GREAT BRITAIN

It was Vice-Admiral Sir David Beatty (above) who commanded the First Battle Cruiser Squadron of the British fleet during the war. Vice-Admiral Sir Rosslyn Wemyss (center) is now First Sea Lord of the British Admiralty. He was chosen to confer with General Foch in the recent armistice negotiations.

### FROM ENGINEER TO ADMIRAL, SIR ERIC GEDDES

Vice-Admiral Geddes (above) was appointed First Sea Lord of the Admiralty by Premier Lloyd George because of his notable record of achievement as railroad engineer and controller of shipping. His career began in America twenty-four years ago as apprentice engineer on the Baltimore and Ohio Railroad.

### IT WAS THE BRITISH NAVY THAT MADE VICTORY POSSIBLE

"Some Americans seem to regard it as a miracle of their own navy that they got a million and a half troops over in a few months and protected them on the way," said Admiral Sims in an address in London. "We didn't do that. Great Britain did. She brought over two-thirds of them and escorted a half. . . . About 5000 anti-submarine craft were operating in European waters, only three per cent of which were American craft." Admiral Sims, whose photograph is at the left, was in command of the American flotilla in foreign waters throught the war. Admiral Benson (right), commander of the United States Navy, has gone overseas to take part as the American naval representative in the Allied councils.

# W I T H t h e p o s - s i b l e exception of Mr. H. G. Wells, no man made a greater impres- sion on me in Eu- rope than Gen- eral Tasker H. Bliss. General Bliss represents the United States at the Versailles Conference and is probably the best informed Ameri- can today on the real attitude of the Allies on all pending military and political ques- tions that come up for discussion between them. The highest per- sonages with whom I had audi- ences were the President of France, the King of Italy and the Prince of Wales. The most impor- tant officials I met included Pre- mier Clemenceau, Premier Orlando, Mr. Balfour, For- eign Minister Sonnino, General Joffre and General Pershing. In this article I propose to give some account of my visits with General Joffre, Premier Cle- menceau and President Poincaré, all arranged for me thru the courtesy of the American Ambassador, Mr. Sharp. JOFFRE, CLEMENCEAU AND POINCARÉ

BY HAMILTON HOLT

*French Official, from Paul Thompson*

*President Poincaré (second from the left) in consultation with officers at the front*

At my interview with the hero of the Marne, Mr. Dawson, one of the secretaries of the American Embassy, was good enough to accompany me to act as intermediary and interpreter. The Marshal has his headquarters at the handsome and famous war school in Paris. We arrived at the door on the minute and were at once ushered into the reception room by liveried attendants. Shortly the announcement was made that the Marshal would receive us. After going thru I should think half a dozen ante-chambers, in each one of which we passed officers who saluted us, we finally arrived in a room where the famous "Blue Devil" who accompanied Joffre on his trip to America was sitting at a desk. We stopped long enough to exchange greetings and then passed on to the final room. The Marshal was seated at his desk, but he instantly rose to meet us with the utmost cordiality. He seemed taller and heavier close up than when I saw him the year before on the Columbia University Campus receiving his LL.D. degree. He wore bright red breeches with high black boots and a dark blue coat with six gold stars on each sleeve. He had a way of looking down as he spoke as tho he was shy and his voice was as low as that of a guide in the Canadian woods.

I had prepared a list of questions to ask him in order to save his time. Some of them were rather pointed, but he was so frank that before the conversation was half over I was asking him freely everything I wanted to know. The Marshal made it plain to me that I must not make public what he said, tho he kindly gave me permission to repeat his remarks to a few important officials in America whom he specified. So I am not at liberty to give the most interesting and startling portions of what he said. But when I afterward told Ambassador Sharp what the Marshal said he thought it so important that I understand he sent the gist of it by cable to President Wilson. It must be remembered that on April 29th, the date of my interview, the Germans were pushing both the French and English back. Things were looking their blackest. Foch had just been made Generalissimo of the Allied Armies and if he could not save the day there were only two or three men who could possibly be called to fill his place. Joffre, of course, was one of them. I was told it would be unfair to him, therefore, to urge him to let me publish his views on military questions because that might injure his future usefulness if he should be called back to the supreme command. To a journalist the temptation to publish observations which would create an international sensation was naturally great, but I can without violating his confidence go so far as to say that he fully realized the importance of America's participation in the war and felt the

and not depend upon France, who needed all her men in the fighting line and could not spare any one to build railroads and establish back line communications for us.

"It is to America," he said, "that we look for the future. She has already done much for us. Because we know that she firmly intends to do far more, and because we know what we have already done and what we can continue to do while waiting for America's full effort to make itself felt, we look upon the future with confidence."

When I left after three quarters of an hour the last words he said were: "Tell the American people how grateful I am for the wonderful reception they gave me." And when I replied that there were two reasons for this, one because we loved him and one because we loved France, he smiled and bowed.

My conference with Premier Clemenceau was less formal but no less frank. I went to the office of the Minister of War, on the Rue St. Dominique, May 18th at 5:30 p. m., crossing the Seine to the left of the Chamber of Deputies. I entered into a large courtyard paved with small, white pebbles as is the custom in France. My card was taken by the concierge at the gate across the court and then I was summoned into a large reception hall. I walked up the great staircase, at the head of which sat at a desk a man with four decorations pinned on his dress coat and a chain about his neck. At six o'clock sharp, the hour of my interview, this functionary motioned me to open the door

absolute necessity that we should speedily place a large army in France and that the officers should be thoroly trained. He thought that there had been much improvement in America's methods of drill since we had arrived in France and that an American army of one million would have considerable importance in the conduct of military operations. Little did he realize, apparently, that we should have 2,000,000 in France before the year was over. He spoke very highly of the American soldier who, he said, was strong and vigorous and had the real fighting spirit. He felt, however, that we must support our own army in the field

and not depend upon France, who needed all her men in the fighting line and could not spare any one to build railroads and establish back line communications for us.

"It is to America," he said, "that we look for the future. She has already done much for us. Because we know that she firmly intends to do far more, and because we know what we have already done and what we can continue to do while waiting for America's full effort to make itself felt, we look upon the future with confidence."

When I left after three quarters of an hour the last words he said were: "Tell the American people how grateful I am for the wonderful reception they gave me." And when I replied that there were two reasons for this, one because we loved him and one because we loved France, he smiled and bowed.

My conference with Premier Clemenceau was less formal but no less frank. I went to the office of the Minister of War, on the Rue St. Dominique, May 18th at 5:30 p. m., crossing the Seine to the left of the Chamber of Deputies. I entered into a large courtyard paved with small, white pebbles as is the custom in France. My card was taken by the concierge at the gate across the court and then I was summoned into a large reception hall. I walked up the great staircase, at the head of which sat at a desk a man with four decorations pinned on his dress coat and a chain about his neck. At six o'clock sharp, the hour of my interview, this functionary motioned me to open the door

French Official, © Western Newspaper Union

Tasker H. Bliss at General Headquarters

at his left and walk in. As I passed over the doorsill I found almost immediately in front of me M. Clemenceau himself. He is a short, broad, Turkish-looking Frenchman with iron gray, close-cropped, drooping mustache and bushy gray eyebrows. He is, I believe, seventy-seven years old. He looks sixty. He was dressed in a short Prince Albert coat and wore a black skullcap on his head with triangular earlaps tied above. His hands were covered with black gloves. Motioning me to a seat he began the conversation, speaking in perfect English. After he had expressed the goodwill that France has for America I thanked him for the honor of the interview and asked him what he thought about the idea of the League of Nations.

"I cannot commit myself to that now," he said. "My whole time is taken up to winning this war and nothing else. After the war is over then we may have a League, but all effort now toward that end is premature. I am not opposed to a League, but I was put in to win this war and all other business must be put aside for that. If we had a League," he continued, "would England give up India and we Madagascar?" I told him that this was an internal question and that the United States and France and England would have to settle for themselves the problems of the Philippines and Madagascar and India, and that the League as such would not necessarily be concerned with them. "India does not think so," he said. And I could see from what he said further that he had his own ideas on the subject. It was quite evident that the Tiger will permit nothing to divert him from the great task of winning the war. But every one told me that when the war is over he will not oppose the plan for a League of Nations.

I then asked him his impressions of the American soldiers. "All France rejoices in your ardor," said he. "We can never repay what you are doing for us. Your men are fine fighters. They have only one fault, if it be a fault. They are too eager. They do not like to dig. They have far too many casualties for the fights they have been in. I have seen the figures and I know."

When Judge Wadhams asked him two weeks before if it was true that the weakest thing in the American army was the staff, his only reply was to

wink one eye. When I asked him the same question he was more frank and said that our officers would have to learn much, but that they were of as good material as the best. I asked him whether it would be possible to have one General Staff as we had one Generalissimo. He thought not. It is safer to let each nation have its own General Staff, but it was best to have one Generalissimo. I asked him how long the American soldiers would have to be brigaded with the French and English troops. He informed me that no positive answer could be given to this question, but that whenever the Americans felt themselves ready then it was time for them to fight as a unit. These are some of the things that Clemenceau told me. As in the case of Joffre the most interesting things he said I must not repeat. Of his remarks about President Wilson, however, I take the liberty of quoting this: "Tell him for me to come over to France and see the war for himself."

My audience with President Poincaré took place June 10th. Secretary Bliss of the American Legation was good enough to take me in the Legation

(c) Underwood &amp; Underwood

Clemenceau returning from the trenches

car to the Palais d'Elysée and act as interpreter. We entered the great courtyard of the French "White House" and were ushered into a small reception

Paul Thompson

Joffre, photographed on his visit here

room. After passing thru seven or eight antechambers, all beautifully decorated with French paintings and tapestries, we finally came into the presence of the President of the French Republic. He was sitting at a desk in his study overlooking his rose garden. President Poincaré is much handsomer and younger looking than I had supposed. He comes from a distinguished Lorraine family and is a cousin of the great mathematician Henri Poincaré. He wears a pointed beard which is tinged with gray, and has clear eyes and a fine complexion. He understood what I said to him in English, but spoke always in French. He expressed his great pleasure that the American army, especially the common soldiers, fraternized so naturally with the French. Generals Foch and Petain had assured him of this only the day before. He thought that the valor of our men was above all praise and he was confident that the spirit of America would sustain France. France, he said, wants first our infantry and then artillery. That is the great necessity. General Foch and General Sir Douglas Haig had just assured him that affairs were better than they had been, and that the next few months would be arduous, France and England could hold out till America's preponderance of men arrived. "We shall then win the war," he said. "Yes, the United States will be the decisive factor."

I asked him if he would express an opinion about the League of Nations. He replied that we must have a league of peace, but it must be a real league of peace and not a league of war such as Germany established. In her Mittel Europa scheme she not only controlled Austria but intended to conquer and control other nations. We must have our league founded on justice, not on aggression.

I asked him what France wanted most of the United States, for anything that France wanted we would be more than glad to do. "Many Americans ask me that," he said, "and it always touches me deeply. You are doing all and more than we can ask. Let us stand together in the days to come, for I believe we two nations are destined to lead the world in the paths of liberty and justice." And as we rose to go the last words he said were: "Our victory in the end is sure."

# CASUALTIES

BY WILFRID WILSON GIBSON, PRIVATE 381907

## Tombstones

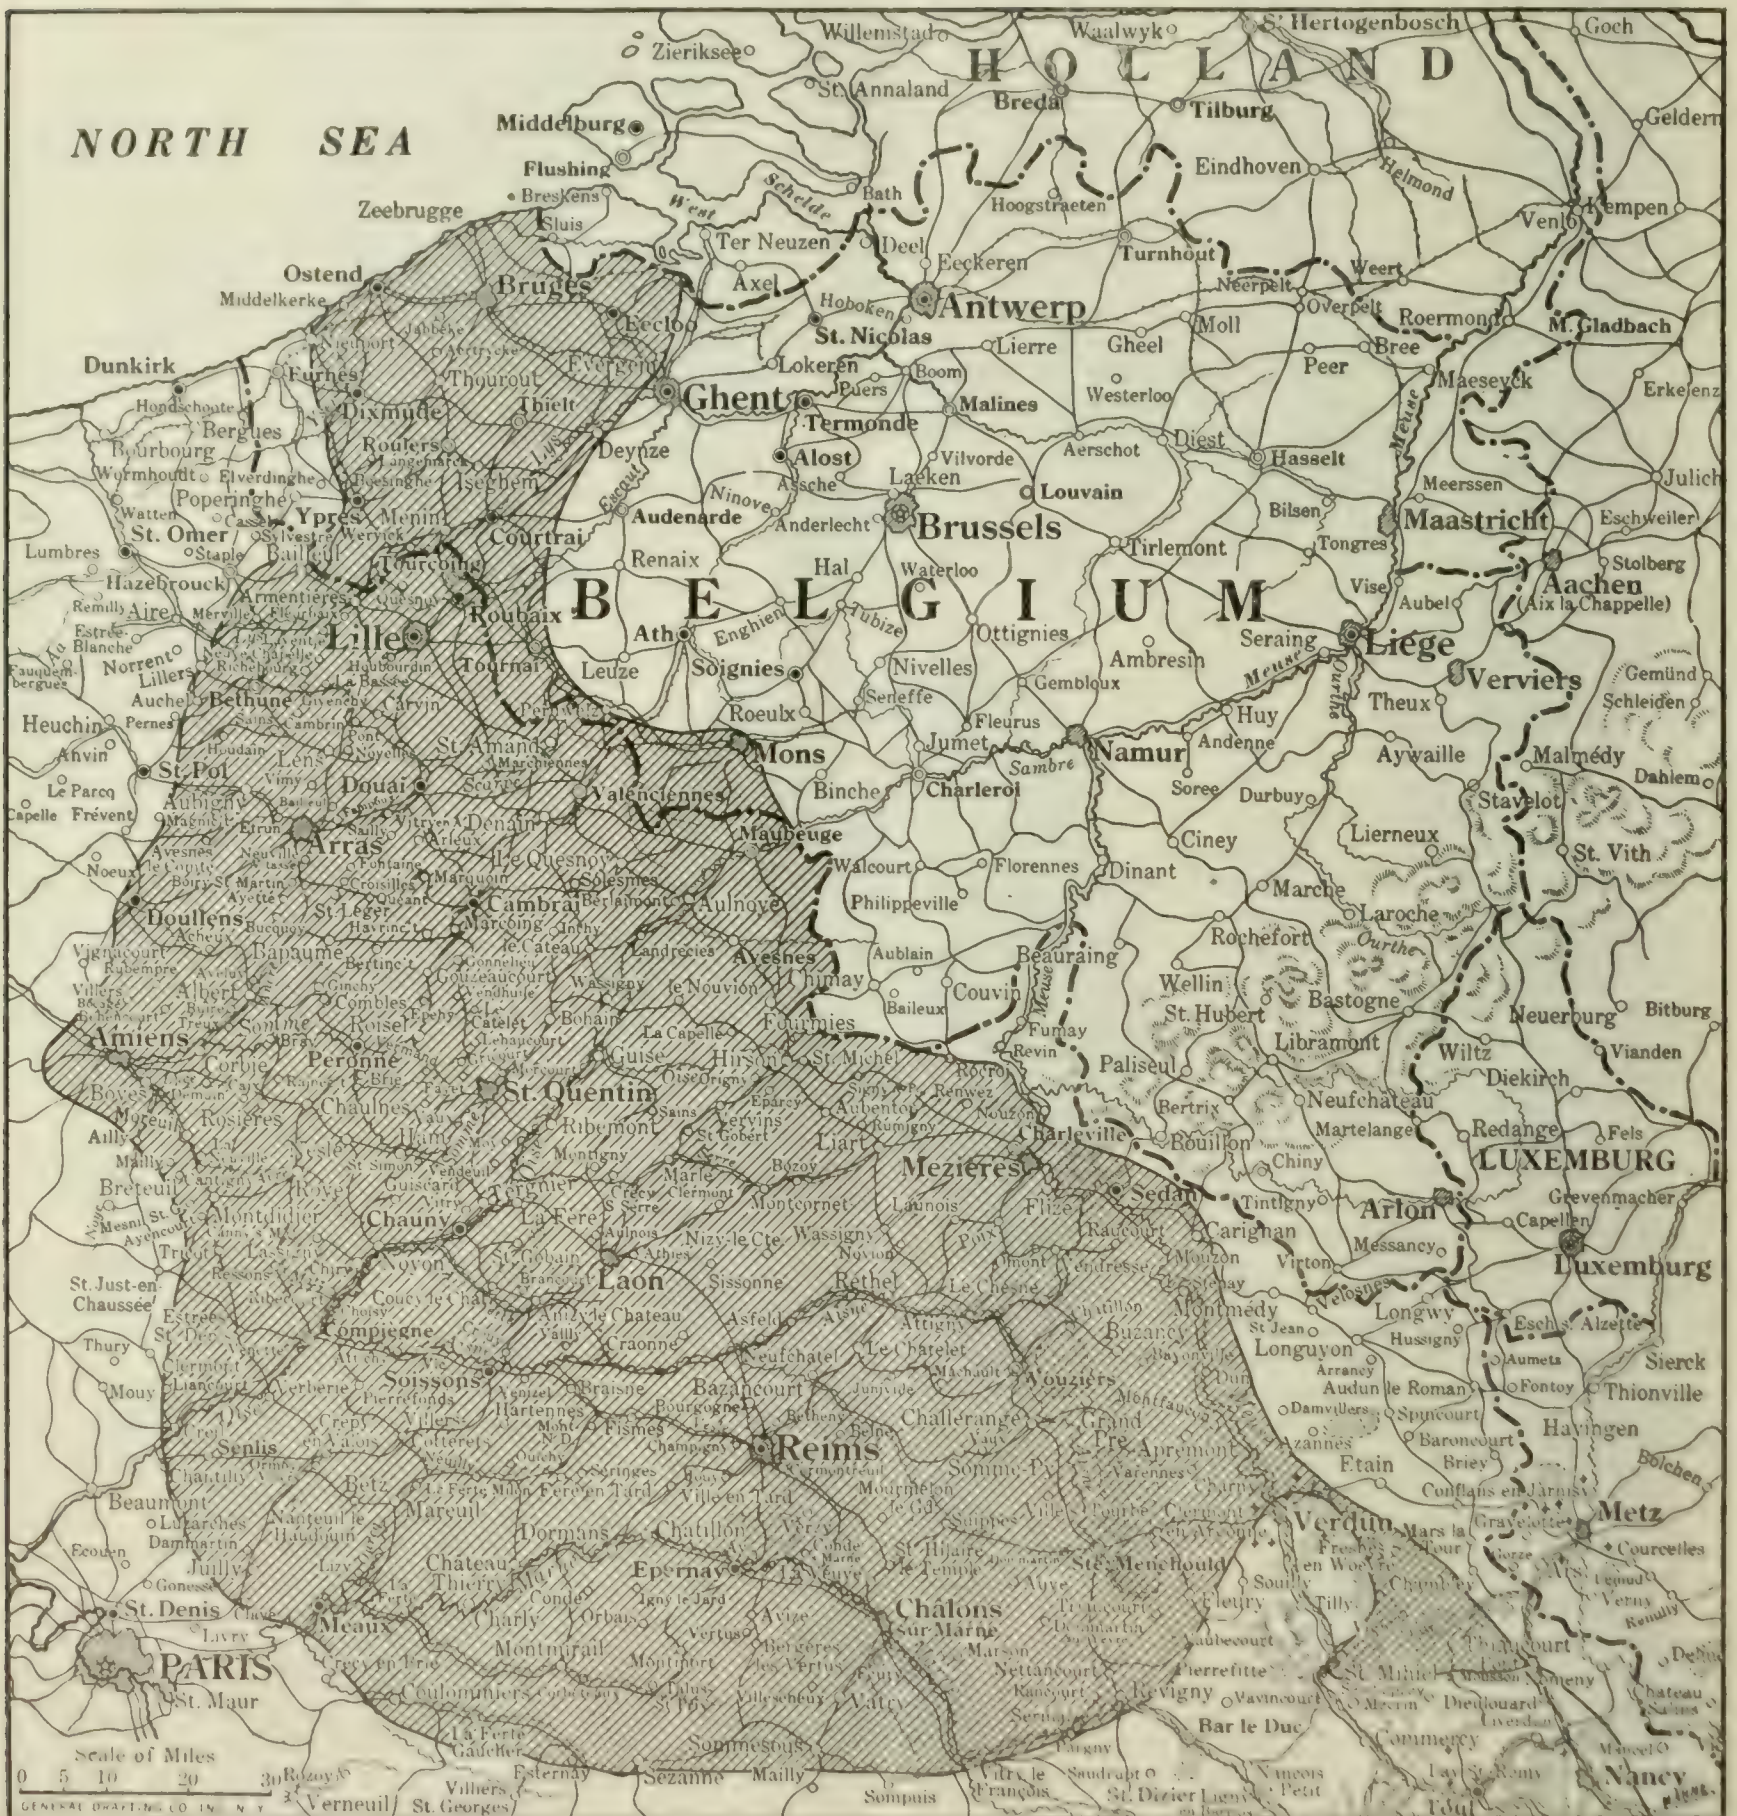

He polished granite tombstones all his life  
To make a living for his bairns and wife  
Till he was taken for the war, and he  
Went on his first trip over the salt sea.

Now, somewhere underneath the Flemish skies,  
Sunk in unsounded flats of mud he lies  
In a vast moundless grave, unnamed, unknown,  
Nor marked at head or foot by stock or stone.

## The Ring

Stripped mother-naked save for a gold ring,  
Where all day long the gaping doctors sit  
Decreeing life or death, he proudly stood  
In his young manhood, and they found him fit.

Of all that loveliness of flesh and blood  
The crash of death has not left anything:  
But tumbled somewhere in the Flanders' mud  
Unbroken lies the golden wedding ring.

THE LAST LINE OF BATTLE

When truce was declared at 11 a. m., November 11, 1918, the Allied and American forces in France and Belgium had reached approximately the limit of the shaded area on the right. The limit on the left is the line of the farthest advance of the German invasion at the end of August, 1914. The shaded space between is the territory fought over in the intervening time.

# THE BOCHE TASTES HIS OWN MEDICINE

## A British Airman's Story of His Bombing Flight

"TIME'S up, sir! You've only half an hour."

I rubbed my eyes, turned over in my bed and saw a shadowy figure moving in the darkness. I had been dreaming peacefully of the homefolk, and I awoke to the realization that I was about to start on a perilous venture from which I might never return.

A few hours earlier we had received our instructions. My squadron was to start at two o'clock in the morning to raid a German town fifty miles away—to bomb certain factories and stations. We had carefully studied the maps, got our route and targets clearly in our minds; and I had snatched a couple of hours' sleep before starting. And now it was half-past one.

Luckily there was no time for thinking about it; and with a muttered word which I did not learn at Sunday school, I jumped out of bed and slipped into my flying outfit of fur and leather, gloves and goggles. A cup of steaming coffee; and within ten minutes I was sallying forth into the darkness.

According to the forecast of the evening before, a half-moon should have been sailing serenely in a cloudless sky. As luck would have it, her ladyship was coyly veiling her beams behind dense banks of clouds; a heavy drizzle was falling; and the world was damp, dark and uncomfortable. Away to the right the white star-shells were rising, blooming in the air like great flowers of light and then fading away. In front, as I made my sodden way across the aerodrome, I saw the faint ghostly glimmer of a line of aeroplanes drawn up in front of their hangars, with yellow lights and fantom forms flitting about

BY THORNTON HALL

them; and on my ears broke the roar of engines, rising and swelling into the deafening chorus which is the sweetest music the airman knows. They were being tested by the mechanics, to make sure that they ran smoothly and well.

"She's going grandly, sir!" shouted my mechanic as I strolled up. "Steady as a rock at 1600." "That's fine," I answered as I walked round the machine and examined it closely as a preliminary to climbing into my seat, and testing the controls to assure myself that all was clear. A glance at the revolution counter showed me that the number of revolutions was correct; and at that moment my observer rushed up, panting and wiping his mouth, and climbed into his seat in front of me. By this time the other machines were all manned, and we were ready to start on our errand of reprisal and destruction.

A glance at my watch told me that it was exactly two o'clock; at the same instant a signal was flashed across the aerodrome and the first of the "buses" darted away, like a released greyhound; taxied with swiftly increasing speed between the avenue of lights which sprang magically into being, outlining the aerodrome; rose into the air with the grace of a swallow, and vanished into the darkness. Other signal flashes quickly followed; a second, a third and a fourth machine dashed away in the wake of the pioneer, soared into the blackness and disappeared.

And now it was my turn to fare forth into the unknown, with all its perils and adventures. It was my first night-flight over the lines; would it also

be my last? But there was no time for such thoughts and speculations.

I signaled to the mechanic to give the propeller a swing. "Contact, sir?" he shouted. "Contact," I answered. Round flies the propeller. The engine roars in a deafening crescendo. I wave my hand as signal for the blocks under the under-carriage wheels to be removed. Then I, too, dart away, roaring down the light-fringed avenue; swifter and swifter my flying wheels skim the ground; I soar into the night, and the lights in the darkness below dwindle to glowworm points. I am off at last into the unknown.

Thank heaven, there is plenty to think about. The direction, the "air speed," hight, petrol and oil pressure, the running of the engine, all will claim my constant attention; and each is indicated by the instruments before me, illuminated by tiny electric bulbs.

I scarcely seem to have settled down to my work before I see, far beneath me, the glow of star-shells flooding with light jagged lines of trenches and the intervening desolation of No Man's Land; and in an interval of darkness, vicious spurts of red flame, which show that, even in the watches of the night, the rival hosts are wakeful. Happily the enemy is not wakeful enough to pay any heed to us; and no "Archie" barks his protest against our trespassing.

The first danger thus safely passed, as I speed away eastward a strange sensation possesses me—partly of exultation at being free and untrammelled in the night sky, unlimited by any lines or boundaries, at being on my way to Germany with my load of powerful bombs; and partly of a sinking sensation in the stomach, the old anticipatory

Reproduction by Underwood & Underwood

The bombs from a British plane are shown here bursting on the apex of the railroad triangle at Metz

dread of the schoolboy about to be caned, or of the dentist's patient, both of whom find realization the least part of their fear.

But this feeling soon vanishes, and I settle down with a grim sense of pleasure and expectation to the work before me. I am flying thru a world of darkness to the first great adventure of my life. If it should prove my last—well, I shall at least have crowded a few glorious moments into the close of my few years.

By this time the moon had wearied of her coyness; she had shaken off her mantle of clouds, and revealed herself in all her beauty. A couple of miles beneath us the landscape at last disclosed itself in hill and valley and wood, the silvery streaks of rivers, solitary scattered homesteads and sleeping villages and towns, as we passed swiftly over them on our errand of destruction.

So far I had flown entirely by the compass; now I was able to check my flight by the ground features, and I discovered that we were within ten miles of our objective. I had traveled forty miles in just under half an hour; and seven or eight minutes more would bring us over our target. If there had been any doubt, it was soon removed by a series of red flashes in the distance, which told me that one or more of my predecessors had already got to work.

Swift on the flashes came a startling development, which, altho it was to be expected, sent my heart into my mouth;

Bain

One of the biggest British bombing planes, a Handley-Page

for two long fingers of light leaped from the earth and began to sweep the sky. Quickly two more followed; then others, until I counted a dozen luminous fingers ranging the heavens, crossing and recrossing each other in fantastic patterns, and forming a barrier of dazzling light between me and my goal.

At the same time I saw a number of quick, red flashes—followed by others in different positions, as battery after battery of anti-aircraft guns came into action, to form a barrage round the town. It seemed certain death to go on. It seemed impossible to get thru that deluge of shells and live. But if it was death to go on, it would be worse than death—unutterable disgrace—to turn tail. And setting my teeth, I made straight for the “fiery furnace.” In less than a minute I was surrounded, caught on all sides by the swaying lanes of light. Suddenly I saw a brilliant red

flash in front of, and perhaps a hundred yards beneath me; then another, and another; and above the roar of my engine I heard the sharp crack! crack! of the bursting shells. Round puffs of smoke floated past me; I saw them dotted all over the sky, white in the moonlight.

I seemed to be passing thru a cauldron of fire. Hundreds of green balls, like sparkling necklaces of emeralds, soared past my wings, leaving trails of smoke. Ceaselessly the red flashes of the shells lit up the machine as they burst around it. At any moment, I knew, one of these shells might send me crashing to the earth ten thousand feet below, but, so

far from feeling fear, to my surprise I found myself reveling in it.

The excitement was intoxicating; I felt as if I must shout with the wonder of it all. I had no idea that playing hide-and-seek with death was such an exhilarating game; and as I dived, side-slipt, banked vertically and “zoomed” to dodge the lights and the shells I felt a hundred times the joy any football “scrum” has ever given me.

So exciting was it that I had forgotten all about my goal and my mission, when, glancing down, I discovered that I was already on the outskirts of the town on which we were to drop our “pills.” “Here we are!” bawled my observer—the first words he had spoken since we started. “Right ho!” I shouted back. “Down we go!” And, throttling my engine, I dived down towards the town lying outspread far beneath us. Down we [Continued on page 269]

## I AM AMERICA

BY EDGAR LEE MASTERS, Author of “Spoon River Anthology”

The song of America mighty in battle: behold  
I am the world's great hope made manifest in the flesh.  
Look at the men of my loins, confident, powerful, bold,  
Dreamers of dreams that are new as the spring is fresh.  
Look on my daughters who walk where the winds are sweet,  
Loosing the trammels of time, seeking the newer truth.  
I am America, passionate, keen and fleet,  
The nations of old have their use, but I am Youth!

Remembering and repaying I come at the cry of France,  
Cherishing England's glory, I stand by England's side.  
I barter, travel, adventure, live to the full romance,  
Heeding the while the words of the voices that prophesied:  
Washington, wise, patrician, Jefferson, lover of men,  
Lincoln the maker of harps from the salvage of guns,  
Giving his heartstrings for strings for the song to rise again;  
Look at my daughters, the muses, the gods, my men.

The secret stir of my spirit mixes the blood of the races.  
I shall have none for my own but my breed and clan.  
I take the spirits of Babel, the stranger faces  
And make them into my image, American.  
None shall inherit my portion, who sulks or resists,  
Hides under cover of seeming an alien desire:  
Tyrants, oppressors, the spawn of them, royalists,  
Brawlers, disturbers, must melt in my forge's fire.

Millions of soldiers for peace, and countless treasure  
Out of my great abundance, harking the voice of the Age:  
A new day dawns poured from Eternity's measure,  
Freedom shall be the rule of the world and its heritage.  
Wherever the sun springs forth, it shall gladden the free,  
Yellow and black and brown born into a wonder world  
Kept for the living of life by hands instructed of me.  
The flag of crossbones and skull shall forever be furled.

I am America, hands prest close to my breast,  
Looking across the waters, patient, subduing my grief.  
Come back, O Sons, when the battle is won and the pest  
Of the wild hog's madness dies for the world's relief.  
Out of the spirits treasured in words that are hidden  
Bring forth to use, remembered, lay close to heart.  
Build and cease not, out of them, you are bidden  
To the molding of domes, lest the glory of me depart.

Bring for my use the wisdom of Europe, my mother,  
Forgotten or never possess, to be made my own.  
Whatever is profitable bring me, tho it come from another  
I will make it flesh of my flesh, and bone of my bone.  
Come back, O Sons, not hardened alone in war,  
But rich in the visions of progress, garnered up for my hand.  
I am the evangel America blest with a rising star.  
You may turn or delay me, but I at last shall command.

# CARTOON COMMENT

## THE WAR THUS COMES TO AN END

### THE FALL OF MILITARISM

"L'Asino," Italy, published the cartoon below before the final defeat of Germany and the overthrow of her militaristic monarchy. The beast of burden is labelled "The People." Militarism, falling headlong, has dropt "Mittel-Europa" and "Deutschland uber Alles"

### ACROSS NO MAN'S LAND

Defeat, carrying aloft the white flag of truce, is leading Kaiser Wilhelm across the desolation that his vain hopes of world dominion have created and is bidding him accept the consequences in surrender. Cartoon by Kirby in the New York "World"

### THANK GOD!

Cartoon by Cassel in the New York "Evening World"

### THE GREATEST NEWS IN HISTORY

A cartoon by Darling in the "New York Tribune" that points graphically the glory of peace in the trenches

### THE HOUSE OF HOHEN ZOLLERN

Rollin Kirby has presented forcefully in this cartoon from the "New York World" the most prominent recent instance of how republics are tearing down the strongholds of monarchy

### THE PEACE MAKER

"Stars and Stripes," the newspaper of the A. E. F., published this cartoon of victory, by Private Baldrige

# ARE WE STRIVING FOR FINANCIAL SUPREMACY?

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

A short while ago the press quoted Mr. Paul M. Warburg, international banker and ex-member of the Federal Reserve Board, as stating substantially that nothing but mismanagement could wrest the financial premiership of the world from us.

Financial supremacy—the altitude which England had reached, which Germany had desired to attain and which American bankers had discussed since the beginning of the world war. A few years ago the United States was a debtor nation owing billions of dollars to European investors, particularly those in England, France, Germany and Holland. When the war was well along American bankers not only began to buy back the securities which they had sold in Europe many years ago—government, municipal, railroad and industrial issues—but actually began to lend hundreds of millions of dollars to European governments. At that time there were those who questioned the ability of this country to become the world's banker and these viewed with considerable apprehension the outcome of our first large financial operation with European governments—the Anglo-French 5 per cent loan which was placed in October, 1915, amounting to the colossal sum of \$500,000,000. The success of this issue made American bankers begin to feel that, after all, there *was* a possibility that we could not only continue to buy back our own securities from Europe, but that we might even begin to finance European nations. Our financial operations with Europe since then have reached such a magnitude that there is no doubt about our position of financial strength.

There is considerable difference between a country which is financially eminent and the one which seeks to use that supremacy in order to dominate other nations. Have we been striving for financial supremacy? If we have been, we are likely to succeed in view of the unquestionably decrepit financial condition which all of the belligerent states will find themselves in immediately after the end of the war. The United States has thus far given her allies financial credits to the amount of over \$7,500,000,000. Before the war our national debt was but a billion dollars. Now the debt exceeds sixteen billions.

We have not only loaned our credit to our allies but have built up an enormous war machine involving the expenditure of many billions of dollars. We have not only been supporting a vast army abroad and in domestic camps, but have organized a vast "army behind the army" in this country consisting of millions of men and women engaged solely in war activities. After the war is over all of these workers will have to readjust their economic status and returning soldiers will have to be provided for, but the great burden which will fall upon us is that of assisting our allies to rehabilitate their devastated regions and develop their natural resources. All of this will require capital, enormous amounts of capital. Only we can supply this capital, for the European peoples will hardly be able to bear more taxation or finance further great loans without foreign assistance.

No nation will be in as strong a financial condition as the United States, not only because of our enormous supply of raw material but because we are daily becoming more and more efficient in the manufacture of finished products from this raw material, because we will have the ships to send

the goods abroad with, because our credit structure has been maintained in a sound condition thanks to a Secretary of the Treasury of remarkable executive ability. If we must assume the role of world-banker, or rather banker to our allies, will we eventually abuse this power and become unreasonably dictatorial, or will we be as altruistic after the war is over as we were during the war?

We should profit by the experiences of our allies with respect to the employment of foreign capital. We should not follow Germany's methods in advancing financial assistance for the development of the latent resources of small nations. The case of Italy is one in point. Italy was for many

*Paul M. Warburg, international banker, who believes the United States is financially supreme above all other nations*

years a poor country in so far as minerals and raw materials were concerned, altho it was rich in man-power and water-power. The ambition of Italy's statesmen to make her a great power in the Mediterranean, for she had to be that in order to protect her extensive sea coast, made it necessary for her to spend large sums for armaments. In order to protect herself she was obliged to join the Triple Alliance, altho one of the parties thereto was her ancient oppressor—Austria. The great benefit which Italy received thru this alliance was economic, for German capital literally poured down into Italy from the Alps, developing her industries, railways, hydro-electric plants, water works, banking institutions, etc. The foremost bank in Italy was under absolute German influence and controlled an enormous number of industries located all over Italy.

While the Italians had originally appreciated the influx of foreign capital which developed their country's resources, even German capital, they soon began to realize that with financial control existing, political domination was but a step away. For, after the Germans had secured control of a great part of Italy's financial and industrial enterprises they began to attempt to secure control of legislators and even ministers. So while the Italian people were friendly with German financial interests so long as they confined themselves to finance, the moment they saw the yoke of political domination held over them they began to rebel. And when the war broke out there was an insistent clamor for the dissolution of the Triple Alliance, for war with Aus-

tria and freedom from German financial control. Those statesmen who wisely guided the destinies of Italy were quick to un-

shackle their people from German economic bondage.

As Italy felt about this question, so feel Rumania, Serbia, Russia and other eastern nations which will require capital after the war is over. Even in Turkey, German capital was only favored because of the political bonds which held the two countries together. As Germany was feared by small nations because of her growth toward supremacy in the world of commerce and finance, so, I fear, would *any* nation be feared which tried to assume the role of financial protector of small nations that later it might claim political sovereignty as a reward for the financial assistance.

We will be called upon for many billions of dollars to aid our Allies in their work of reconstruction. Our bankers are human. They are in business to make more than six per cent. The methods of some financial interests in Mexico and Central America and the bad political situations which resulted therefrom are deplorable examples of what selfish vested interests can do if allowed to exploit their capital in an unbridled fashion. So, there will always be the temptation on the part of some of our financiers of the old school to control the situation, and perhaps political domination may be a condition of agreements to extend financial assistance to some of our allies or friendly neutrals. Washington's warning to avoid entangling alliances will loom up immediately before us, and we may take his advice, or we may not.

The United States can obviously grant an enormous amount of financial credits to its allies, but if President Wilson's ideas regarding "dollar diplomacy" have had no material change, I doubt that he will permit anything that may lead to financial supremacy in the extreme sense. We must not be feared, we must not inspire jealousy, tho we can insist that our financial power be respected. For as Germany's encroachments upon world commerce portended the desire for political as well as commercial domination, so would any evidence on our part to be a dominant nation be a cause of distrust for us even on the part of our present allies. After the war is over and the peace terms settled, all nations, be they allies or enemies, will proceed once more in their peaceful pursuits and competition in trade and finance will begin.

The investor is interested in this phase of finance because *his* funds will have to be used in order to finance operations in foreign countries. Every man is an investor who has money in the savings bank, owns a life insurance policy, or else actually holds securities. And every citizen who is an investor should study the policy of his government with respect to its financial operations abroad as well those of its bankers. To what extent American financiers will finance foreign industries will depend very largely upon the taste of American investors for foreign securities. If we are to have a period of wild speculation in foreign stocks, then American financiers should be discouraged by the investing public. This is a time when every investor and every bank officer should develop an international trend of thought because America is now in the category of international financial powers, a position it did not hold before 1915. Do we want this to lead us to a state of financial depotism, or to a position of benevolent economic leadership?

# THE ARMISTICE

(Continued from page 244)

seven days after the signing of the armistice. Directions for the voyage will be given by wireless.

Twenty-four—The Allies and the United States of America shall have the right to sweep up all mine fields and obstructions laid by Germany outside German territorial waters, and the positions of these are to be indicated.

Twenty-five—Freedom of access to and from the Baltic to be given to the naval and mercantile marines of the allied and associated powers. To secure this the Allies and the United States of America shall be empowered to occupy all German forts, fortifications, batteries and defense works of all kinds in all the entrances from the Cattegat into the Baltic, and to sweep up all mines and obstructions within and without German territorial waters, without any question of neutrality being raised, and the positions of all such mines and obstructions are to be indicated.

Twenty-six—The existing blockade conditions set up by the allied and associated powers are to remain unchanged, and all German merchant ships found at sea are to remain liable to capture. The Allies and the United States should give consideration to the provisioning of Germany during the armistice to the extent recognized as necessary.

Twenty-seven—All naval aircraft are to be concentrated and immobilized in German bases to be specified by the Allies and the United States of America.

Twenty-eight—In evacuating the Belgian coasts and ports, Germany shall abandon in situ and in fact all port and river navigation material, all merchant ships, tugs, lighters, all naval aeronautic apparatus, material and supplies, and all arms, apparatus and supplies of every kind.

Twenty-nine—All Black Sea ports are to be evacuated by Germany; all Russian war vessels of all descriptions seized by Germany in the Black Sea are to be handed over to the Allies and the United States of America; all neutral merchant vessels seized are to be released; all warlike and other materials of all kinds seized in those ports are to be returned and German materials as specified in Clause Twenty-eight are to be abandoned.

Thirty—All merchant vessels in German hands belonging to the allied and associated powers are to be restored in ports to be specified by the Allies and the United States of America without reciprocity.

Thirty-one—No destruction of ships or of materials to be permitted before evacuation, surrender, or restoration.

Thirty-two—The German Government will notify the neutral governments of the world, and particularly the governments of Norway, Sweden, Denmark, and Holland, that all restrictions placed on the trading of their vessels with the allied and associated countries, whether by the German Government or by private German interests, and whether in return for specific concessions, such as the export of shipbuilding materials, or not, are immediately canceled.

Thirty-three—No transfers of German merchant shipping of any description to any neutral flag are to take place after signature of the armistice.

## VI. DURATION OF ARMISTICE

Thirty-four—The duration of the armistice is to be thirty days, with option to extend. During this period if its clauses are not carried into execution the armistice may be denounced by one of the contracting parties, which must give warning forty-eight hours in advance. It is understood that the execution of Articles 3 and 18 shall not warrant the denunciation of the armistice on the ground of insufficient execution within a period fixed, except in the case of bad faith in carrying them into execution. In order to assure the execution of this convention under the best conditions, the principle of a permanent international armistice commission is admitted. This commission will act under the authority of the allied military and naval commanders in chief.

## Christmas Handkerchiefs (All Pure Linen) at McCutcheon's

"THE LINEN STORE" has long been famous for its wonderful Holiday stocks of Pure Linen Handkerchiefs. It is, therefore, with great pleasure that we announce that our selection this year is quite as complete as those of previous years, notwithstanding war conditions.

It gives us added pleasure to be able to share with our patrons generous advantages in price, due to our foresight in anticipating the present Linen shortage before prices advanced.

### Plain Hemstitched Handkerchiefs

All Pure Linen, of McCutcheon Quality

For Women

For Men

In sheer and medium weights, \$2.00, 3.00, 4.50, 6.00, 9.00 per dozen, and up. Generous in size, wide or narrow hems, \$4.00, 6.00, 7.50, 9.00, per dozen, and up.

### McCutcheon's Initial Handkerchiefs

All Pure Linen, Neatly Hand-Embroidered

Men's 75c ea.

For Men

\$6.00, 7.80, 9.00 and 12.00 per dozen, and up.

For Women

\$3.00, 4.00, 6.00 and 7.80 per dozen, and up.

Women's 50c ea.

Children's Initial Handkerchiefs, 3 for 65c.

Patrons will find it decidedly advantageous at this time to add to their own stock, as well as to select Handkerchiefs for gift purposes.

## What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15¢ in stamps or coin will bring you the Pathfinder 12 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth now in its 26th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home weekly, fairly, briefly, here it is. Send 25¢ to show that you might like such a paper, and we will send the Pathfinder on probation 12 weeks. The 15¢ does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## UNCLE SAM—GENERAL CONTRACTOR

(Continued from page 255)

has been let on the fee or percentage basis. Unconsciously rather than otherwise, the tendency has been in this direction. If, as the contractors maintain, they have nothing to sell but services, why should not these services be bought on a professional basis as is the case with the lawyer, the architect, or the consulting engineer? This, in the writer's opinion, will be one result when the Government has done with experimenting and has adopted one general policy for all bureaus and departments.

Now, what are the objections to employing the contractor professionally? There are two principal ones. First it is said that the contractor has no incentive to keep down costs. In theory one might as well say that his lawyer, unless employed on a contingent fee, would have no incentive to win a lawsuit; or again that an architect being paid 5 per cent of the cost of a structure would wish to increase its cost in order to increase his own fee. Professional relations are based on confidence and contracting firms are learning that if they are to hope to keep abreast of the times they must obtain a reputation for economic and skilful management as the basis of such confidence in them. It may be readily admitted that during a period of transition such as that thru which we are passing the contractor will not at once change his stripes—from good gambler to professional man. As to this there are well-trying safeguards in the form of bonus and penalty clauses which make it advantageous to the contractor to attain economy.

The second objection to employing the contractor professionally is that large concerns have an advantage over smaller ones; that inducements of various kinds are offered to secure the management of construction work. In short, that the plums would not be equitably distributed. But there is no reason why competition of service should not be judged as well as competition of price, and this is exactly what is being done today in two different ways by the Emergency Construction Committee of the War Industries Board and by the Housing Corporation of the Labor Department. The former committee, by the examination of the records to which reference has been made, is making its selection. The latter committee is attempting a method somewhat more scientific. It, too, keeps a file with records showing the ability, size and standing of contractors. From this list a tentative list of six to a dozen of the most logical candidates for a given project are selected. These firms are then invited to submit a concrete proposal embodying answers to such questions as:

Estimated cost of project.

Fee desired for service of management.

Time required to complete work.

Proposed organization to be placed on the work.

Proposed general method of operation.

Machinery to be supplied and value.

These questions are then examined, judged, weighed, and applied in a predetermined formula. The result is then obtained automatically, the only personal element being that involved in weighing the answers to the questions. No doubt this method is not perfect, but it is a good impartial attempt along scientific lines.

We thus learn that Uncle Sam by his very lack of policy in using all systems, has been an experimenter on a large scale and in a direction that will have a marked permanent effect. For if contractors are becoming professional, certain reactions affecting architects and engineers are worth noting.

## DIVIDEND

### THE AMERICAN COTTON OIL CO.

The Board of Directors of The American Cotton Oil Company, on November 7, 1918, declared a semi-annual dividend of three per cent, upon the Preferred Stock, and a quarterly dividend of one per cent, upon the Common Stock of the Company, both payable December 2, 1918, at the Banking House of Winslow, Lanier & Co., 59 Cedar St., New York City.

The Stock Transfer Books will be closed on November 14, 1918, at 3 p. m., and will remain closed until December 6, 1918, at 10 a. m.

**RANDOLPH CATLIN, Secretary.**

# BUY W. S. S.

Heretofore the architect has held an anomalous position. Paid by the owner, he was supposed to represent both owner and contractor impartially, and was the court of last resort. Artistic by temperament he was entrusted with the actual work and often with the making of the contract, both being purely business propositions, the object being to see that the owner got a dollar's worth for a dollar. Altho not so well endowed by temperament or training as the engineer in regard to ultimate income or investment, the architect was usually superior on questions of design and plan. There resulted such fiascos as when, for example, an architect designed workmen's houses so costly that workingmen could not afford to rent them. The project may have been said to have been a failure no matter how beautiful. The general contractor had a different policy when it came to his own personnel. The army is full of engineers, both of the consulting and contracting variety. Where not engaged in uniform they were busy in civil life. On the other hand private building being very slack, an architect finds little to do and with the exception of the housing committees, where he naturally finds berth, has not been greatly in demand.

Hence it seems we may put down as an effect of this war a permanent change in the contractor's relations between owner and architect, engineer and contractor, whereby the contractor will be more and more employed on a professional basis with a consulting engineer as the representative of the owner and contractor alike, with the architect playing a second role.

## THE BOCHE TASTES HIS OWN MEDICINE

(Continued from page 264)

plunged, swifter and swifter, in that intoxicating dive, the wind shrieking past us, until, at a height of a thousand feet, I flattened out over our particular target—a railway terminus which was a conspicuous object in the town.

At last my observer's turn has come and he is ready for it, with his eye on his target and his hand gripping the bomb-dropping lever. He pushes the lever forward, and I hear the clatter of the released bomb as it drops on its errand of destruction. Another and another follow in quick succession, until the last of them all is sent speeding on its way. A few seconds later, looking down, I saw sheet after sheet of flame leap up from the station and its immediate vicinity; and I saw one burst over a standing train. It was a wonderful feat of marksmanship; for, as we learned afterwards, my friend had demolished a great part of the station, and had played terrible havoc with a troop train, killing or wounding a large number of Hun soldiers.

But there was no time to stay to see what damage had been done, with the searchlights now focussed on us and the shells crashing in hundreds around us. We had to run the gauntlet of death again; and, swinging my machine on to a bank I made a sharp turn and started on the perilous journey home. By flying low, at a height of not more than 500 feet, and driving straight ahead, I managed somehow to get thru with no more damage than a few shrapnel holes in my wings.

"Well!" I said to my observer, "that was pretty hot! You gave them something to think about, old man!" "Guess I did!" came the answer, with a broad grin. "Glad it's over, aren't you? What about some of that chocolate?" And, happily munching the chocolate, we sped away without further adventure until the aerodrome flares gave us a welcome home.

# Do Germs and Climate Cause Catarrh, Coughs and Colds?

R. L. ALSAKER, M.D.

By R. L. ALSAKER, M.D.

NOTE.—Dr. Alsaker is a successful practicing physician in one of the largest cities of the U. S.

My Dear Sir: I have had catarrh since boyhood, and now my two children have it. During the winter months my wife suffers with bad colds.

We have taken treatments from local physicians, using the medicines prescribed; we have used sprays and salves, but have derived no lasting benefit.

We live well, eating and drinking whatever we want, but we do not dissipate in any way. Our family physician tells us that catarrh is caused by germs. Another doctor told us to blame it on the climate. If germs and the climate are the cause of catarrh, I don't see how it can be prevented, or even cured. What have you to say on the subject?

J. B. W.

THIS family is no exception. The majority have catarrh, either chronic or acute. Catarrh of the head is annoying—and filthy. In the throat it causes irritating cough. When it is seated in the chest it is called bronchitis. If allowed to continue the bronchitis becomes chronic and robs the individual of refreshing sleep, comfort and health. It weakens the lungs and paves the way for pneumonia and consumption.

Catarrh of the stomach and intestines points toward indigestion. So does catarrh of the liver, which produces various ills, such as jaundice and gall-stones, often ending in disagreeable and painful liver colic.

Catarrh sometimes causes earache, headache and other forms of pain, and it lays the foundation for many diseases.

This gentleman thinks that germs and the climate are to blame, and as germs and climate are everywhere, we are helpless. It is a tragic fate, or would be, if it were true, for we can't escape the omnipresent germs and climate.

But neither germs nor the climate cause catarrh. Catarrh is caused by improper eating—so are coughs and colds that are hard to shake—and these conditions can be prevented and cured through right eating. And here is how it happens:

When people eat as they should not, they get indigestion, which fills the stomach and bowels with acids, gases and poisons; a part of these abnormal products are absorbed into the blood, which becomes very impure and the whole body gets acid. The blood tries to purify itself, and a lot of the waste attempts to escape by way of the mucous membrane. This causes irritation, and the result is colds and catarrhs.

The right kind of food—food we all like—properly eaten, makes pure blood and produces health, vigor and strength. The right kind

of food builds a sound body, puts catarrh, pimples and blotches to flight, paints roses on the cheeks and makes life worth living.

Catarrh can be conquered quickly, surely, and permanently. It has been done in thousands of cases. *If you have catarrh you have eaten your way to it.* You can cure yourself—you can eat your way out of catarrh into health, and while you are losing your catarrh you will rid yourself of other physical ills: The dirty tongue, that tired feeling, the bad taste in the mouth in the morning, the gas in the stomach and bowels, the headache and other aches, pains and disabilities will clear up and vanish. It is marvelous what proper eating will do, when other means fail. Don't take my word for it, but prove it in your own case and on your own person.

Catarrh is a luxury, not a necessity. Those who get it, can keep it indefinitely. They can also get rid of it and stay rid of it. Those who have catarrh should not complain about it, for they can easily get the knowledge that will show them how to get rid of disease and maintain health.

In every day practice I undertake to teach my patients the cause of their trouble and how to live so as to effect a cure. There is no mystery about my system of treatment. It is a plain, common sense method that anyone, young or old, rich or poor, can put into practice in their own home, in any town or city, in any country. *There is no expense attached to this plan.* It shows you how to live in harmony with the laws and principles that GOVERN health. It shows you how, what and when to eat so that your Catarrh will leave and you will become healthy and happy. Years of experience have proved its complete success.

My instructions are easy to understand and pleasant to follow. No drugs, salves, serums, sprays or health resorts required or prescribed. No special foods to try or buy.

I have given full and complete directions for the cure of Catarrh in my book entitled *Curing Catarrh, Coughs and Colds*. Thousands of people in all walks of life have recovered health by following the plan outlined in this book of health building knowledge.

If you want to cure yourself of Catarrh and learn how to prevent colds send two dollars to my publisher, Frank E. Morrison, Dept. 161, 1133 Broadway, New York, for your copy of *Curing Catarrh, Coughs and Colds*. Follow my sensible instructions for one month, then if you are not satisfied with the improvement in your health and the lasting value of the treatment recommended, return the book and your money will be refunded.

NOTE.—Many patrons have written that this book is worth \$2.00 and some have said \$1.00. One man in ordering a book for a friend writes: "If it cost \$2.00 the advice would be cheap."

PUBLISHER'S ANNOUNCEMENT: R. L. Alsaker, M.D., is a new type of physician and a recognized authority on the subject discussed in the above article. He does not doctor disease, he shows the sick how to recover health. Dr. Alsaker has put the net result of many years of professional experience with sick people into his writings and it is a real pleasure for me to recommend them because I know from personal experience that good results always follow an observance of his simple instructions. Some of Dr. Alsaker's remarkable books of health instruction are: "Curing Catarrh, Coughs and Colds," "Diets for Diabetes and Bright's Disease," "Conquering Consumption," "Curing Constipation and Appendicitis," "Getting Rid of Rheumatism," "Curing Diseases of Heart and Arteries." A prominent business man of Syracuse, N. Y., who recovered health by following Dr. Alsaker's advice writes: "Measured by the fees charged by the average physician for a single prescription, Dr. Alsaker's educational health books are worth from fifty to \$400 each." Send only \$2 for the book that treats of your condition and learn quickly how you can recover health and happiness. Money returned if you follow instructions for one month and are not satisfied with your improvement in health. Frank E. Morrison (Estab. 1889), Publisher of Dr. Alsaker's Educational Health Books, Dept. 161, 1133 Broadway, New York.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Eisenwein

For many years editor of Lippincott's Magazine and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time. "play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, expensive valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

## THE DAY

(Continued from page 256)

soldiers and sailors threw the dignity of their uniform into the melting pot of hilarity, and exchanged hats and coats with each other and with their feminine companions.

Many of the women who marched in the triumphant, aimless parade were weeping unashamed. Men of supposedly sedate years gave the lie to gray hair and imposing girth and capered like youngsters.

Caught in the great human tide that ebbed and flowed up Fifth Avenue and Broadway, were scores of cars and trucks. Over the latter men and women swarmed, waving flags, shouting and singing. Many of the automobiles added to the din by series of loud explosions caused by "flooding the mufflers" and then allowing the engines to race.

From windows of office buildings came showers of impromptu confetti, newspapers, magazines, waste paper and even books torn into bits and flung to the breeze. Cascades of ticker tape poured down from window sills. Rolls of paper towels were unreeled and swam down the avenue on the breeze, long white ribbons carried by the wind for blocks.

And the people themselves! Buffeted to and fro by the surgings of the crowd, deafened by the fusillade of popping mufflers, hoarse from cheering, eyes glittering with tears they could not quell, they wandered up and down the streets quite drunk with joy. For the first time in four years New York was utterly happy.

## Capital Copy

The army uses 225,000,000 pounds of sugar a year.

There are thirty-two army divisions now on French soil.

The American Red Cross has 18,000 Italian children under its care.

The boys in France are now eating 200,000 pounds of lemon drops per month.

Secretary McAdoo asks the public not to use the roads for any unnecessary travel.

Up to April 1, Uncle Sam purchased 55,958,000 woolen socks for the boys in France.

The fur and felt hat makers agree to limit styles, colors, shapes and trimmings for spring of 1919.

France has officially adopted for use in all French hospitals American Red Cross standard surgical dressings.

The Red Cross has made an appropriation of \$900,000 to the American Committee for Armenian and Syrian Relief.

The President has approved the finding of the War Industries Board that hereafter copper shall be 26 cents per pound.

Railroad Director McAdoo announces the creation of a "Bureau for Suggestions and Complaints" for suffering passengers.

The collection of funds from individuals for the building of hospitals for wounded soldiers is disapproved by the War Department.

Contracts have been let for forty recreation houses for nurses at the American base hospitals in France. Each house will cost about \$9000.

The country has now but one Army—the United States Army. On August 7 the Regular Army, the National Guard and the Draft Army were consolidated.

Soldiers' next of kin should notify the Adjutant General's office promptly of change of address so that telegrams may be delivered immediately. In case of failure to do so, the telegrams are returned to the office as undeliverable.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION HISTORY, CIVICS AND ECONOMICS

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited, and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions, and thought.

##### A. The Close of the Great War.

###### I. President Wilson's Address.

1. Give a short talk emphasizing the American characteristics made evident in the address.
2. Give oral, or written, paragraphs in which you prove the following: (a) A settlement based upon disinterested justice is better and more lasting than one based on competitive interests. (b) Disorder defeats itself. (c) To conquer with arms is to make a temporary conquest. (d) To conquer by earning esteem is to make a permanent conquest.
3. Give a spirited speech showing by what methods alone President Wilson believes Germany may gain national liberty.

###### II. The Terms of the Armistice.

1. Write a detailed brief of the terms.

###### III. The Day.

1. Let five students play the following parts: a soldier from the trenches; a resident of Paris; a resident of Strassburg; a citizen of London; a resident of New York. Let these five, as if in a play, tell to one another how the people of their respective places acted upon the announcement of peace.

##### IV. Editorial Articles Concerning the Close of the War.

1. Present a narrative telling of the overthrow of autocracy.
2. Give an exposition of the expression, "freedom of the seas."
3. Prove that "The League of Nations" would be helpful for the peace of the world.
4. Give a spirited talk explaining why the development of Bolshevism threatens the civilization of the world.
5. Prove that the organization of an international provisional government is a present necessity.

##### V. The War News of the Week.

1. Let several students compete in speaking briefly and clearly on the following topics: The Flight of the Kaiser; The Revolution in Germany; Present Conditions in Europe; Present Conditions in the United States; United War Welfare Work; The Reduction of the Army.

##### B. Joffre, Clemenceau and Poincaré. By Hamilton Holt.

1. Bring together from the article all that is said concerning America's aid in the war.
2. Present character studies of the three men whom the article concerns.
3. Analyze the article in such a way that you can give a series of rules for the writing of an interview.

##### C. Germany Must Pay the Price. By James W. Gerard.

1. Write a short character sketch of the former Kaiser, casting it into the form employed in "The Sir Roger de Coverley Papers."
2. Read aloud effectively the paragraph naming the crimes of Germany.
3. Write a paragraph in which you contrast the actions of a hero, such as Henry V. and the actions of the Kaiser, when in danger.

##### D. The Boche Tastes His Own Medicine.

1. Write a critique of the article, showing in what ways it is successful, and
2. Read aloud the most effective parts of the article.

##### E. Uncle Sam—General Contractor. By C. S. Rindfoos.

1. Point out the principal thought presented in the article. Show what words the writer gives in support of the principal thought.

##### F. Sum Up the Ways in Which This Number of The Independent Helps You to Be a Better and More Intelligent American Citizen.

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. The End of the War—"The Terms of the Armistice," "The Story of the Week."

1. State as clearly as you can the connection between the revolution in the various centers of Germany and the abdication of the Kaiser and the acceptance of the terms of the armistice by Germany.
2. Indicate on a map (a) the boundaries of the various belligerent nations of Continental Europe; (b) the battle lines on the western front, the Italian front and the Balkan front at the time the terms of armistice were accepted by the various Central Powers; (c) the limits of occupation granted to the Allies and the United States by Bulgaria, by Austria-Hungary, by Germany.
3. Why is Alsace-Lorraine included in the list of invaded territories in paragraph 2, while paragraph 4 makes separate mention of the countries on the left bank of the Rhine?
4. Why do the Allies and the United States specify the military and industrial stores which must be left by the Germans in the evacuated territory?
5. What is the effect of paragraphs 12 to 16?
6. Why do the Allies ask for "free access to the territories . . . on the eastern front either thru Danzig or by the Vistula"? Why is "freedom of access to and from the Baltic" demanded? Why is it stipulated that "the existing blockade conditions . . . are to remain unchanged"? Why is it stipulated that "all Black Sea ports are to be evacuated by Germany"?
7. In your judgment, which of the terms of the armistice are merely guarantees against the resumption of military operations? Which are based upon the probable peace terms which will be offered to Germany and her former allies?

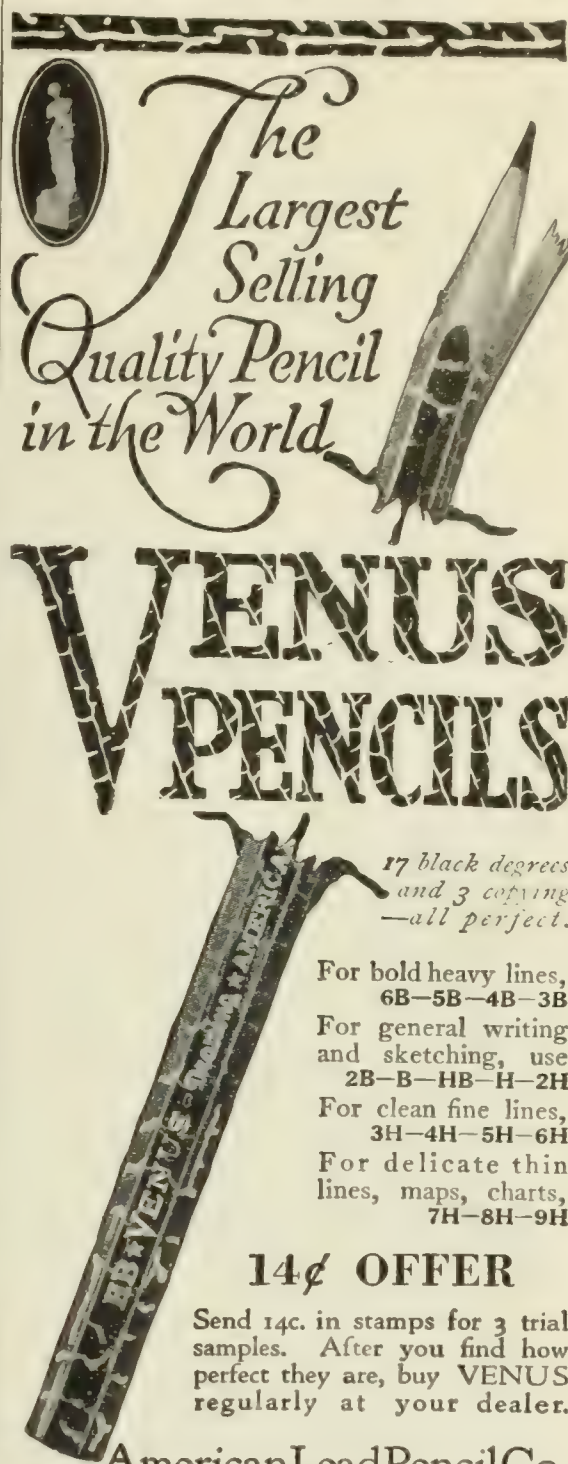

##### II. Problems of Reconstruction.

###### A. International—"From Prussianism to Bolshevism," "Germany Must Pay the Price," "The War Thus Comes to an End," "Are We Striving for Financial Supremacy?"

1. What, in your judgment, was the probable cause of the revolutions in Russia, in Germany, Austria-Hungary and Bulgaria? What will be the probable method of settling these revolutions? What will be the ultimate results?
2. Do you believe that "It was President Wilson who gave the signal for the revolt [in Germany]," or that the revolt resulted from internal conditions?
3. "The participation of America brought new issues into the war." What are these issues? How will they be settled?
4. "It must be admitted that Russia is just now in a worse state than under the Czar's regime," etc. Do you agree? Would a similar statement be true of Germany? of Austria-Hungary? What suggestions does Mr. Gerard offer for remedying the conditions which exist? What suggestions does the President offer?
5. Why does *The Independent* reprint its editorial of August 10, 1917?
6. Formulate, as far as you can, the problems which the Peace Conference will have to solve.
7. Will the United States or some other nation occupy the dominant place at the Peace Conference?
9. What foreign financial and commercial policy does Mr. Cisenole recommend?

###### B. Domestic—"Thirty-six Billion of Life Insurance," "Reduction of the Army," "Non-essential Industries Relieved," "Prices and Economy," "Foreign Trade in Future," "Feeding the World."

1. Compare the present system of caring care of disabled soldiers and of the families of soldiers killed in battle with the pension system which was evolved after the Civil War.
2. What other measures for the Government taken for providing for the men in the army when they are returned to civil life?
3. Why are plans for military demobilization already under way while no immediate steps will be taken toward demobilizing any part of the naval forces?
4. Make a list of the problems of reconstruction which must be solved by the Government before peace conditions can be said to have been reestablished in the United States.

# \$36,000,000,000 OF LIFE INSURANCE

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

FROM the latest bulletin of the Bureau of War Risk Insurance to reach my desk (of date November 3) I

learn that the total insurance in force on the lives of sailors and soldiers is \$35,736,000,000. This sum is carried under approximately 1,000,000 applications previously made and, for all practical purposes, it represents the same number of persons. Using the average per man stated in the bulletin (\$8743) we get 4,087,384 as the outside number of men carrying the life and disability protection furnished by the Government.

It is interesting from several viewpoints to note these figures. By comparing them with results attained under normal conditions, we are enabled to estimate more or less closely the degree of appreciation which men have for the protection afforded by life insurance as the probability of death changes from remote to near.

To begin with, we are to remember that a very large proportion of the men who are carrying the Government insurance are unmarried and virtually devoid of the responsibility attaching to the heads of families. Certainly not less than three-fourths of the whole number are without dependents. They range in age from twenty-one to thirty-one years. The average men within those ages, without wives and children, make up a group of the insurable population which the most expert life insurance solicitors, contemplate with emotion akin to despair. They possess the confidence which belongs only in a superlative degree to youth; they are more than solvent financially for, even penniless, they have their ability and strength and no liabilities; life lies all in front, and that is rosy with the light of the rising sun. I venture the assertion that if I could present here a statement showing the life insurance carried before the war by unmarried men between the ages of twenty-one and thirty-one it would not average \$1000 per man.

When we consider that the average of all the policies in force in the regular life insurance companies of the United States is less than \$2500, and that this figure represents the insurance of those who have only \$1000 and those who carry hundreds of thousands on their lives—the struggling workmen with limited incomes, up thru all the grades of income, to the millionaire—my guess may be regarded as a conservative one.

And yet, here is an average outstanding insurance of \$8743.

NOW, every man knows he will die; very few know when. In this expression of the matter we have a clue to the solution of the problem involved in taking insurance under normal (natural) conditions and abnormal (war) conditions. The soldier does not know with any more certainty that he will be killed by his enemy in war while he is engaged in that occupation, than that he will die of disease during the same period of time as a civilian pursuing one of the occupations of peace. He does know that a greater number of men will die in battle during any given time than would have died natural deaths. He feels that he may be one of those killed. In this he separates himself from the mass; his individuality becomes more assertive. True, the probability of death has grown nearer; but not in so great proportion as he apprehends.

We may get an idea of the increased probability of death in battle and thru disease by comparing these two as reported in the casualty lists issued daily by the War Department. It will not, for several

reasons, lead us to accurate results but, as indicated, it will aid us in approximating the difference. The report for November 8 last, places the total killed in action and dead of wounds up to that date at 17,661, and the total dead of disease, accident and other causes at 5817. From this we see that the battle ratio is three times that of disease, accident and all other causes.

If the average of \$1000 of life insurance per man in normal times is reliable—and in my opinion that sum is too large rather than too small—and if the average of \$8743 of Government insurance represents the civilian-soldier's idea of the increased probability of death in war, then we find that he has multiplied the danger by nine instead of by three.

PASSING to another phase of this great mass of outstanding insurance, bulking many times larger than any provision of the kind ever made before in the history of the race, or that, in all probability, will ever again be made, we come to the question of its permanency. The claim has been made, with not a little reason to back it, that there are in this country political economists and men of lesser capacity and attainments, in and out of the Government service, who hope to make Government insurance a national and lasting institution. They believe that an effort will be made to extend the activities of the Bureau of War Risk Insurance into the peace period.

The bulletins of the bureau have fully set forth in attractive fashion all its achievements in connection with the soldiers' and sailors' insurance. The figures are stupendous and fascinating. We read of hundreds of thousands of checks sent out to beneficiaries each month alongside of billions of new insurance written in the same time. In the bulletin before me I read: "Almost two billion dollars of new insurance was written during October. . . . With the resumption of steady entrainments, the flow of new insurance is now returning to its *normal* rate of approximately *one billion dollars a week*." (The italics are mine.) The total insurance in force on November 3 is reported at \$35,736,000,000. The bulletin informs us that it has received four million applications for insurance, four million applications for allotments and allowance and, in addition, has received and answered three and a half million letters. Continuing it says:

"The bureau has grown to be the largest single bureau in the Government, comprising the largest health and accident insurance company, the largest disbursing organization, and incomparably the largest life insurance company in the world."

We have in all this the record of a great piece of work, considering the matter from the viewpoint of those who, thru the hardships and tragedy of war, will become the beneficiaries. These people, in my opinion, constitute the only permanent portion of the organization.

We are not to lose sight of the nature of the contract subsisting between the insured and the insurer. The soldier and sailor have a guaranty from the Government for a service which is variously estimated by careful life insurance companies as being worth from four to eight times the price charged the insured by the Government. That is to say, the war risk, whatever the cost of that may prove to be, is carried by the taxpayers of the country, the soldier and sailor paying, in monthly instalments, only the small premium required under

what is called a "yearly renewal term policy." Between the ages of twenty-one and thirty-one, this premium ranges

between \$8 and \$9 per \$1000 a year. Different companies estimate the cost incurred in performing active military service at from \$25 to \$100 per \$1000 additional.

As will be seen the soldiers and sailors are paying the same premium they would pay a company for the same kind of policy if they were not soldiers.

But there will come a time when the millions now in the army and in the navy will return to their civilian occupations. Under their contracts they have the right to continue them at the yearly renewable term rates. But this privilege is not an indefinite one. It terminates at the expiration of five years. Then the insured man must choose a different form of policy—an ordinary life, limited payment life, or endowment. A very large proportion of them, perhaps 80 or 90 per cent, will be in sound physical condition, and the risk of death in war will have disappeared completely. With the latter will also go the keen appreciation they had for life insurance. The result will be a heavy lapse ratio of the outstanding insurance. The billions will disappear very much more rapidly than they accumulated. As the men are mustered out of the military establishments and their monthly income arrangements with the Government, out of which their monthly premium payments on insurance were automatically deducted, are terminated, and they turn to civil occupations for new sources of earnings, the connection between insurer and insured will be broken. Add to this the consciousness by the latter that the risk of death has diminished in a greater degree than actual, and we virtually have the psychology which will make for a lapse ratio as unparalleled in the history of life insurance as was the achievement in getting thirty-six billions together in eighteen months.

ALTHO the war is virtually over, it will be some time—perhaps a year or two years—after the declaration of peace before the army and navy will return to its normal size in point of man-power. During that period it is reasonable to suppose that the applications for new insurance will continue, but at a reduced rate, and that the total in force will also continue to increase. But the actual cessation of hostilities will mark the beginning of the disintegrating process which, in my opinion, will be unceasing until, in the course of five or six years, the total amount of insurance in force will be limited, virtually, to those who prudently cannot dispense with the protection it affords.

As I have frequently pointed out in this department, "term" insurance is essentially emergency insurance. Employed in that way it serves a most useful purpose. When the necessity which dictated its use has been relieved, it should be abandoned, a fact recognized by the Government in this instance when it stipulated for its conversion to a more permanent and useful form of contract. The life insurance companies are few which will write it on any other condition. The work, however, commences all over again when the conversion period approaches, for renewed efforts by agents are necessary in order to prevent policy holders from lapsing at the expiration date of the "term" contract. From this experience we may reasonably conclude that, without the assistance of trained solicitors, the Government faces a stupendous task in an effort to keep any fair proportion of its outstanding insurance in force.

## REMARKABLE REMARKS

**CHARLIE CHAPLIN**—Contrast spells interest.

**CHAMP CLARK**—I felt bully over the armistice.

**JOHN B. CROSBY**—We are Americans—not capons.

**KING ALBERT**—The Americans are wonderful soldiers.

**H. G. WELLS**—He was a writer, a foot note to reality.

**LADY DUFF-GORDON**—Dress is the expression of the soul.

**CONGRESSMAN MEYER LONDON**—I admit that I am a good lawyer.

**THE KAISER**—England is virtually a republic, as bad as France.

**ELIHU ROOT**—No man can frame the time table of the Almighty.

**COLONEL HOUSE**—You can't tell what I am thinking of by my smile.

**PROFESSOR HOETZSCH**—We say farewell to old Prussia and Kaiserdom.

**DAVID LLOYD GEORGE**—We will do no wrong if we abandon no right.

**JOHN MOBLEY**—I cannot define a jingo but I know one when I see it.

**SENATOR LODGE**—No attention should be paid to anything said by the Kaiser.

**RUTH CAMERON**—Do you sometimes marvel at the two-ness of yourself?

**GLEN BUCK**—Bill is not going to everlasting bliss, but to everlasting blister.

**WILLIAM WRIGLEY, JR.**—Some don't get into print—and they may be the greatest.

**LINA CAVALIERI**—There are at least fifteen different kinds of germs in the mouth.

**JOHN DILLON, M.P.**—I regard President Wilson as the hope of Europe and civilization.

**ADMIRAL SIMS**—The British grand fleet is the foundation-stone of the cause of the Allies.

**MAXIMILIAN HARDEN**—Eventually the secular power of the papacy will be established in Rome.

**DR. KRISTINE MANN**—On rising in the morning walk around the room on all fours for three minutes.

**ENRICO CARUSO**—In my opinion no criminal court can try William Hohenzollern. Almighty God is doing it.

**TOM WILSON**—It is just as important for an institution to have a good reputation as it is for an individual.

**DR. W. T. McELVEEN**—It is always easier to build castles in the air than to build woodsheds on the ground.

**LEON ROUGEORS**—The universal war has demonstrated to all nations the necessity for an international constitution.

**JOHN D. ROCKEFELLER, JR.**—No longer is the question asked where a man comes from, who his parents are, what he has.

**EARNEST ELMO CALKINS**—A good ad run once will not bring as much business as a poor ad run frequently and for a long time.

**HELEN ROWLAND**—When our doughboys come back they will be able to speak French fluently with both hands and to

**EZRA POUND**—I believe in every man knowing enough music to play "God Bless Our Home" on the harmonica, but I do not believe in every man giving concerts.

## THE NEW PLAYS

**The Big Chance.** An American war play showing how the spirit is purified by war's sacrifices. Mary Nash and acceptable company. (Forty-eighth Street Theater.)

**The Long Dash.** An exciting, noisy melodrama of spies and wireless gun inventions and lost codes and secret service. Robert Edeson plays a double role successfully; Henry Dixie is a true-to-life villain. (Thirty-ninth Street Theater.)

The French Theater is giving not only classics like Molière and Beaumarchais but modern authors like Donnay and Brioux. Of its recent productions *Le Voile du Bonheur*, by Premier Georges Clemenceau, is perhaps most interesting and most skilfully handled. *Georgette Lemeunier*, by Donnay, has the usual problem, but a more wholesome ending than ordinary. *Crainquebille*, by Anatole France, makes its appeal by epigram rather than action. A spy melodrama by Dumas, Fils, *La Femme de Claude*, produced for the first time by the French Theatre, presents Mme. Van Doren as la Vampire supreme. (French Theatre du Vieux Colom-bier.)

## SOME OF OUR WOUNDED

When men are wounded badly they must be handled with extreme gentleness, something not always possible in ambulances, in advanced dressing stations and even in field hospitals. Therefore on an American battlefield, which found itself near a navigable river recently, the medical department rustled a complete river hospital steamer from somewhere and put it into service. It had an operating room, comfortable beds and all modern equipment and appliances for badly wounded cases.

There was no jarring; the boat gently slid toward Paris and in most cases the wounded arrived at destination in fresh condition, considering everything. The trips were continuous until the battlefield fled with the Allied advance too far away from the river.—*Wilbur Forrest in the New York Tribune.*

## WHEN YOU COME HOME

BY ELIZABETH PORTER WYCKOFF

These are the things I will do for you  
When the war is over and you come home:  
I will have the house all fine and sweet,  
The babies shall run to you down the street—  
I have planned exactly how we shall meet  
When the war is over and you come home.  
And in a box that I'm keeping for you  
When your work is over and you come home,  
I have for you to put on that day  
The clothes that mean you are home to stay,  
And your khaki and trappings I'll hide away.  
When the war is over and you come home,  
I am proud of your uniform, proud of you,  
But when it is over and you come home,  
I want you to wear your old soft hat.  
We'll be perfectly happy—we both know that,  
But your old blue suit and your old soft hat,  
I want you to wear them when you've come home.  
—Reprinted from the New York Tribune.

# It is not a real home if it lacks a new, up-to-date UNABRIDGED DICTIONARY

## THE AMERICAN UNIVERSITIES NEW UNABRIDGED DICTIONARY

THE LATEST AND MOST COMPLETE

Contributing Staff from the Leading American Universities—Harvard, Princeton, Columbia, Pennsylvania, Cornell—Assisted by Specialists from All Parts of the World

### Printed on INDIA PAPER

which enormously reduces weight and bulk as compared with the old style Unabridged Dictionaries printed on ordinary book paper. Instead of weighing sixteen pounds the *American Universities Dictionary* weighs only 7¾ pounds. Instead of being 6 inches thick, the *American Universities Dictionary* is only 2¾ inches thick. Instead of requiring an unsightly book stand, the *American Universities Dictionary* can be handled with the ease of a book of ordinary size.

There are nearly 2500 pages in this big volume and 16 Full-Page Colored Plates, besides numerous illustrations in the text.

### DISTINCTIVE EDUCATIONAL FEATURES

In addition to a complete vocabulary of upwards of 400,000 words, pronounced and defined, which comprise all the new words fresh from the laboratories of science, brought into being by the literary masters of the English language, or lifted from the slang of the street into a speech recognized finally by the great scholars of the world, The American Universities New Unabridged Dictionary contains the following valuable departments:

- A Dictionary of Authors
- A Dictionary of noted names.
- A Pronouncing Gazetteer of the World.
- A Dictionary of foreign words used in current literature.
- A Pronouncing Dictionary of Biography.
- A Pronouncing Dictionary of Greek and Latin proper names.
- Practical syntax or simplified grammar.

- Faulty diction, or errors in English speech and writing and how to correct them.
- Rules of punctuation.
- THE PRINCIPAL COMMERCIAL AND FINANCIAL TERMS IN CURRENT USE IN EIGHT LANGUAGES. The value of this vocabulary of equivalents of English business terms in the leading Continental languages will be instantly recognized by every wide-awake business man.

### DON'T STOP GROWING!

Wouldn't it have been a serious handicap to you if you had stopped growing physically when you were sixteen?

How many words have you added to your vocabulary since you left school? How much have you grown in *your command of language?*

Are you still laboring under the delusion that a *small, abridged* dictionary answers all your growing language needs?

You would resent the intimation that you had *stopped growing in intelligence*. Yet the vocabulary of a man or woman is a *direct indication* of his or her intelligence. The man or woman who knows the English language thoroughly and accurately holds the key that unlocks the golden opportunities of life. Discard the little desk dictionary, and the old, out-of-date, ponderous unabridged that served your needs as a child, and order before it is too late the growing "grown-up's"—the latest and the best—*The American Universities New Unabridged Dictionary*, printed on India paper.

### NEVER AGAIN SUCH A BARGAIN

The original publishers of *The American Universities New Unabridged Dictionary* were unable to fulfill their contract with the printers and binders, so believing that the small part of the edition that had been completed and delivered would be rapidly taken up by readers of *The Independent*, we have entered into an arrangement that makes it possible, while the copies last, to offer the volume at HALF THE PUBLISHERS' PRICE, which was \$27.00.

**OUR PRICE TO INDEPENDENT READERS ONLY \$13.50, and Instalment Terms, if desired.**  
**Or \$12.50 with coupon if you want to save the cash discount. MONEY BACK IF NOT SATISFIED**

#### BRUNSWICK SUBSCRIPTION CO.,

Enclosed is \$1.00, first payment on *American Universities Dictionary*, to be shipped charges prepaid. I agree to remit the full special price, \$13.50, at the rate of \$1.00 per month following receipt of book. Otherwise I will within five days ask for instructions for its return, at your expense, and my \$1.00 to be refunded on its receipt.

Name.....  
 Address.....  
 Occupation.....State.....Ind. 11-30-18

418 Brunswick Building, New York City

Bear in mind that the selling price of the publishers of this volume, \$27.00 is less by several dollars than the present price of the only two other standard dictionaries that will compare with the *American Universities Dictionary* in any of the features that distinguish the latter.

The Patent Thumb Index makes any part of the complete vocabulary of nearly 400,000 words instantly accessible. Size of volume 11 3-8 x 9 inches. Two and three quarters inches thick. Weight 7 3-4 pounds.

## IT WILL TAKE TIME

**I**T is easy to proclaim republics *de jure* when revolution has driven kings into exile; to create republics *de facto* is not so simple a matter.

The American Republic was established with less of social disturbance than any other in modern times, yet not without difficulty and anxiety. The Revolution was followed by much misery of an impoverished population, and by occasional insurrectionary outbreaks, of which the Shay's Rebellion in Massachusetts, typical of all, was the most serious. Also the conservative administrations of the Federalists were followed presently by the ascendancy of political elements that were not devoid of those traits which today we associate with the more extreme developments of radical democracy. The French Revolution ended in chaos, and was followed by the Napoleonic Dictatorship, and that, in turn, by the First Empire, the restorations of monarchy, the republican attempts of the 40's, and the Second Empire. The downfall of Napoleon III was followed by the Commune, and that by a military dictatorship before the present strong and stable French Republic slowly grew into full power and effectiveness.

The new republics of central and eastern Europe face unprecedented difficulties. Extremely radical factions are in control, and there is too much reason to fear that their political wisdom is not greater than their political experience. They are acting under the intoxicating stimulation of unexampled opportunities and intense excitement. Imagination is inflamed, and expectation runs riot. The warnings of common sense are impatiently rejected as reactionary and unfriendly, and the one purpose is to destroy an old social order and to clear the ground. The sobering thought that there is little profit in redistributing the wealth of the world after it has been reduced to zero will come later.

It will take time, therefore, perhaps a long time, to build up real republics in Russia and in Siberia, in Germany, in German Austria, in Hungary, among the Czecho-Slovaks

and among the Jugo-Slavs. Those of us who are impatient for the realization of our dreams of a world made securely democratic, peace-abiding and enlightened, may as well prepare ourselves for many disappointments and much tedious waiting upon events. If it is true that the successive generations of mankind learn by their own experience, rather than from the stores of wisdom transmitted by predecessors, it is even more true that peoples do not take the advice of other peoples in their political affairs, and ultimately arrive at solutions of their own problem thru their own blunders and much tribulation.

Far be it from us to play the part of a kill-joy in these days of rejoicing over the destruction of monarchic absolutism and militarism, its instrument; but we foresee a dangerous reaction when those average human beings who do not like to bother their minds with long views or unforeseen complications grow impatient with the imbecilities and the misdemeanors of Bolshevism. They will begin to tell us that order and security are better than impractical ideals, and that a strong arm is needed to save society from disintegration.

It is well to remember, too, that the new republics when they have become stable and efficient will certainly be different in important respects from the republics of this Western Hemisphere. There enters into their making a new and compelling factor, namely, the vast body of socialistic thought, impulse and organization. The American republics from Alaska to Patagonia have built upon the foundations of individualism. One and all have assumed that the multiplication of individual property owners, in particular owners of land, is the most certain way to guarantee democracy. The new republics of the European world will undoubtedly establish collective ownership and collective control in industry on a scale never seen hitherto in the world. This means that democracy is entering upon a new and fateful experiment. The prudent man will not at the present time predict the outcome.

## EQUALITY OF OPPORTUNITY

**T**HE Great War arose out of a struggle for the sources of raw materials and this will be the most difficult of the questions to come before the peace conference. From 1884 to 1914 there was a constant struggle between Germany on the one side and England, France, Italy, Russia, Japan and the United States on the other for the possession or control of territory in the Pacific, Africa and Asia. Finally Germany, infuriated at the frustration of her aggressive ambitions and not content with the fair terms of compromise offered by her opponents, threw her sword of Brennus into the scale. For four years the balance vibrated, then turned decisively against Germany, fortunately for the world—and for herself.

The war is settled, but the question is not. The danger from Germany is eliminated, but the source of the danger remains. It is the old, old cause of conflicts, but on a larger scale owing to the extension of the reach of a man thru the aid of the engine. As Abram and Lot quarreled over the pasturage of Palestine, so England and Germany quarreled over the pasturage of their flocks in Australia and South America. As the life of a Bedouin tribe may depend upon access to the well of an oasis, so the prosperity of Paris or Petrograd may depend upon access to the oil wells of Baku or Tampico. England in 1914 was dependent upon countries oversea for 65 per cent of her essential foods. If then the U-boats had succeeded in their nefarious purpose 15,000,000

### GETTING READY FOR PEACE

"Nieuwe Amsterdammer," Amsterdam, published the cartoon below of Holland preparing to welcome the plenipotentiaries of peace. Recent events, however, have brought Holland ex-royalty instead of peace delegates and the center of the conference for world peace is transferred from The Hague to Versailles

### "THEY KNOW NOT WHAT THEY DO"

This drawing of the priest of a ruined cathedral praying for his enemies was published in "Nebelspalter," Zurich, Switzerland, as representative of the viewpoint of a neutral nation. It is an eloquent interpretation of what Premier Lloyd George of England urged in his speech for "peace without vengeance," as distinguished from the cheap sentimentality and maudlin pity scored in the cartoon below

### THERE'S NO PLACE LIKE HOME

Knott of the Dallas "News," Texas, has drawn a poignant picture of the exiles returning to their devastated homes in northern France

### PITY THE POOR HUN!

"We mustn't ask him to pay the bill," whines the sentimentalist "It's such a big one." Cartoon from the London "Evening News"

people would have gone hungry and England would have been starved into submission. Germany in 1914 was dependent upon the British Empire for 90 per cent of her raw materials. The British were generous, altogether too generous, for their own interests. Australia turned over her metals trustfully to German hands, and England raked out her coal cellars to feed the furnaces of her enemy.

The British will not repeat that mistake. The policy of imperial preference decided upon by conference between the governments of England and the dominions brings these into one great trade combine covering the products of one-third of the habitable earth. This policy is already established by Parliament and private contracts. The Non-Ferrous Metals Act will prevent these going to foreigners until the needs of the empire are satisfied. All the wool of Australia has been purchased by the British Government for a year or more in advance at a fixed price. In 1913 the palm trees of the British colonies in West Africa produced \$20,000,000 worth of oil, of which three-fourths went to Germany. Hereafter all of it will go to England. By the Paris Pact of June, 1916, the Allied Powers bind themselves to take measures in common to render themselves permanently "independent of enemy countries in so far as regards the raw materials and manufactured articles essential to the normal development of their economic activities." The measures specified are customs duties, prohibitions, subsidies, control of transportation and patents and government management of industries. The Soviet Government of Russia has gone further and made all foreign patents a government monopoly.

Whatever may become of all these acts and agreements it is evident that free trade has gone for good. Henceforth and for the indefinite future we shall see not free trade but regulated trade instead, and very strictly regulated at that. The only question is whether it will be regulated by national or international control. Either each nation or group of nations will strive by every means in its power to render itself independent in the way of raw materials and essential industries or the control of the sources of raw materials and the channels of commerce will be placed in the hands of some supernational authority like a League of Nations.

But whatever the new regime of regulated trade may be, the important thing is to see that it secures what was hoped to be secured by free trade when fifty years ago that theory was in favor. The aim of the free traders was justice, that is, equality of trade opportunities. But as we can now see more clearly than then, free trade defeats its own aim, for in the long run trade becomes tied up and in the hands of the most heartless. Free trade, that is, unrestricted commerce, means a free-for-all fight, catch-as-catch-can competition, with no Marquis of Queensberry as referee. It is in the commercial world what anarchy is in the political world and means ultimately that the strongest dominates the weaker, the strongest man, the strongest nation or the strongest aggregation of capital. The strongest man dies and gives a chance to the rest, but the strongest trust may live forever and grow stronger. We tried free trade between the states, but it worked so badly that we have given it up. The several states could not protect themselves against sweated industries and adulterated food. Private monopolies grew so strong that finally the Federal Government had to intervene with a stronger hand to protect the helpless consumer, competitor and workingman. Every year the national control of commerce between the states grew stricter, until now the whole system of interstate transportation and communication is managed by Washington. The output of mines, oil wells and farms is under control. This brings about a better approximate to equal opportunity for all than could be attained by state control or capitalist control. "Protection" does not necessarily mean "tariff," as some still seem to think. There is no tariff between the states, yet interstate trade is by no means "free." Far more effective measures are proposed in England and else-

where for the control of their foreign trade than the mere imposition of customs duties.

The international situation is now the same as the national situation was in the old days of *laissez-faire*. Germany has practically a national monopoly of potash, Chile of natural nitrates, the United States, Mexico and Russia of petroleum, the tropics of coffee, rubber, copra, etc. Each country has some advantage due to its natural resources or the peculiar aptitudes of its people. The question is whether each country shall hold on to what land it has, strive to get what else it can and drive as hard a bargain as possible for what it sells, or whether there is some way of equalizing opportunities by international control. If the present tendency prevails and every nation strives for self-sufficiency as the essential of independence, then the United States is better off than any other except the British Empire. The United States produces 66 per cent of the world's petroleum, 60 per cent of its copper, 40 per cent of its coal and iron, 32 per cent of its zinc and lead. Our territory extends from the Arctic Circle to the tropics and we can raise our own rubber, tea, cocoa and quinine if we have to. Our people are sufficiently numerous and versatile so we could dispense if necessary with manufactured imports.

Since, then, the United States is so independent of foreign commerce, it is proper that an American President should bring forward the proposal to establish equality of opportunity thru international regulation. Mr. Wilson asks:

The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

The equality of nations upon which peace must be founded if it is to last must be an equality of rights; the guarantees exchanged must neither recognize nor imply a difference between big nations and small, between those that are powerful and those that are weak. Right must be based upon the common strength, not upon the individual strength, of the nations upon whose concert peace will depend.

There can be no special, selfish economic combinations within the league and no employment of any form of economic boycott or exclusion except as the power of economic penalty by exclusion from the markets of the world may be vested in the League of Nations itself as a means of discipline and control.

Special alliances and economic rivalries and hostilities have been the prolific source in the modern world of the plans and passions that produce war. It would be an insincere as well as an insecure peace that did not exclude them in definite and binding terms.

The same solution is advocated in a more detailed and definite form by the Labor and Socialist parties of England, France and Belgium, and these parties now hold the balance of power in their respective governments. The Inter-Allied Conference of last February resolved in substance:

There should be no economic boycott of any country after the war. Supplies of foodstuffs, raw materials and shipping should be allocated to the different countries according to their needs. The treaty of peace must secure economic equality in the conquered colonies for the peoples of all nations and thereby guarantee that none are shut out from legitimate access to raw materials. Colonies in tropical Africa should be controlled in accordance with international agreement under the League of Nations.

This, then, is the new vision. It may be thought difficult to carry out. It may be found impossible to agree with it. But it seems to offer the way out of the difficulty. England, France and Japan are to relinquish all of the territory they have acquired during the war, a total area two-thirds the size of the United States. We cannot blame them for this, but we can demand only security for commercial products and their possession. But if under such conditions we have equal access to its natural resources, then these powers will be forced to go on to what they have got, and the world would not be so jealous. England, France and Japan have good records. If then there seems to be a way out of the individualistic, capitalist sources of food and

be worth while for the nations to consent to certain restrictions of the exclusive and proprietary rights which they have been accustomed to exercise in the past.

Liberty and equality are both desirable but not both obtainable in a complete sense. For unrestricted liberty of action brings about the most frightful inequality of condition, while compulsory equality annihilates liberty. So fraternity, the third member of the political trinity, has to be brought in to reconcile the other two. Thru a brotherhood of nations we may hope to secure both equality of opportunity and liberty of utilization.

## OIL AND ORE

**I**N taking over the railroads, telegraph and cable lines our Government has done nothing more than put itself abreast of the practice of all enlightened nations.

But why not do a little leading as well as following? We submit that the next easy step along the path of sound government ownership would be the taking over of the mines, both oil and ore.

A word to the President is sufficient.

## MR. GOMPERS GIVES WARNING

**W**E have been glad to see that American newspapers of the responsible sort have discussed the speech of Mr. Gompers on the position of labor after the war seriously and in good temper. Mr. Gompers and the American Federation of Labor have well earned the right to be taken seriously and to be treated with respect. From the beginning of the war the Federation has been splendidly loyal, and American labor in general has done its full part toward winning the struggle. Questions of difference between wage-earners and employers have with only occasional exceptions been put over until the return of peace.

When, therefore, Mr. Gompers gives warning that the Federation will not tolerate absolutism in the industrial world any more than the democratic peoples will henceforth tolerate absolutism in the political world, he speaks with a sense of responsibility and with a full mastery of the facts. There has been absolutism in the industrial world, as every decently informed man knows, and there are captains of industry who are now intent upon restoring it. We do not undertake to say whether or not Mr. William H. Barr of Buffalo, president of the National Founders' Association, is one of these men, or whether Mr. Gompers rightly understood Mr. Barr's recent remark that the eight-hour day would have to be abolished and wages materially lowered from their present scale. It is possible that Mr. Barr meant only that economic conditions, apart from the purpose of any group of employers, will necessitate the reduction, but we know that employers of prominence have been talking and doing the other thing. Among themselves they have taken a strong and mighty position, and have declared their intention at the earliest possible moment to force a fight on the wages issue.

Because of the economic loss and the public inconvenience which a strike entails, there is no reason in the world why the wages issue should not be fought out. If employers are sincere they will believe that hours are too long for reasonably profitable industry, and to try to force a reduction, on their part, have a right in all cases. Where there is any group of employers who would rather rule the industrial world whenever it feels like it, and who, except willy-nilly, we presume, the junkers has another way of dealing with the question of Labor will have nothing to say about

the conditions under which wage-earners shall perform their tasks.

So, far, then, the position which the American Federation of Labor has taken is altogether commendable. It stands between industrial absolutism on the one hand and industrial anarchy on the other hand. It stands also for a healthy individualism in opposition to socialism. All this is good American democracy, and if the Federation adheres to these positions and works to establish them by lawful means it can count on the support of the American people. It is a policy at once conservative and progressive. Hitherto the farm owners and the small business men have been the substantial basis of American democracy. Knowing the value of individual property and the possibilities of individual initiative and responsibility, they have held our national life to ways of soberness and of sane progress. They are becoming, however, a smaller proportion of the population, and wage-earners are becoming a larger proportion. Therefore, nothing could be more promising for the future of American life and the perpetuation of its best traditions than a strong preference of the organized wage-earners for individual freedom and voluntary organization, associated with a fixed determination to discountenance both a disintegrating anarchism and an absolutist arrogance of control. We are confident that the American people in general will take this common sense view of the issue which Mr. Gompers' sober warning presents.

## WHY?

**W**HY should the United States support the Omsk Government with men and money when that Government proposes soon to resume the sale of vodka prohibited by the late Czar?

Why should the American people deny themselves food in order to send it to Siberia when, according to the official statement of the Minister of Supplies of the Omsk Government, "1,714,000 bushels of grain can be spared for the operation of the Russian distilleries without causing a serious food shortage"?

Why should the American troops in Vladivostok have been paraded at the ceremony of November 11 when the Imperial Russian eagle was replaced on the monument from which it had been removed?

## A PROPHET IN HIS OWN COUNTRY

**E**X-SENATOR JONATHAN BOURNE, JR., President of the Republican Publicity Association, notes the following facts:

At the treaty of Paris which ended the Revolutionary War, the United States was represented by John Jay, Benjamin Franklin, John Adams, Thomas Jefferson and Henry Laurens.

At the treaty of Ghent which ended the war of 1812 the United States was represented by John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell and Albert Gallatin.

At the treaty of Paris which ended the Spanish-American War the United States was represented by William R. Day, Cushman K. Davis, William P. Frye, George Grey and Whitelaw Reid.

Ex-Senator Bourne then concludes:

Around the table at which the peace terms are considered and determined, side by side with the Premiers of Europe, whom do we find entrusted with the future destiny of the American Republic, Colonel House of Texas!

Perhaps it has not occurred to the Ex-Senatorial President of the Republican Publicity Association that the verdict of history may assign a higher degree of statesmanship to the man who represents the United States at Versailles in 1918, than those who so ably represented her at Paris in 1783, at Ghent in 1814, or at Paris in 1898.

# THE STORY OF THE WEEK

## The Revolution in Germany

The revolutionary ferment was working in Germany throughout the month of October, altho little was heard about it in America. Peace demonstrations were held almost every night in Unter den Linden, in which sometimes 1500 persons took part. The police were powerless to prevent denunciations of the Kaiser and shouts for the Republic. The military authorities made energetic efforts to suppress the American propaganda in Germany, but the leaflets containing the President's speeches and other arguments showered from airplanes or sent in thru Switzerland were widely read and made converts among the people.

In Bavaria early in October the Social Democrats held an open conference at which plans were made for the establishment of a democratic government. Even in the Reichstag debate, Deputy Rühle, a Socialist, declared: "The Kaiser must abdicate!" and when he was called to order he retorted: "A call to order will not save him from the criminal court." He was again called to order, but concluded: "Only a revolution can save us." The German papers at the instigation of the Government published terrible pictures of the ruin brought upon Russia by the Bolsheviks, but this did not prevent the revolutionists from adopting the characteristic institution of the Bolsheviks, the soviet.

The American General Staff at Washington were of course well informed of the state of public opinion in Germany. The fluctuations in German morale due to defeats and victories were recorded on a chart and the line which was placed at 100 per cent in 1914 on the assumption that the German people were united and confident had dropt to zero between November 10 and 15.

The Nuremberg Jäger battalion was sent to Berlin to put down the revolution, but when it got there it despatched delegates to the Executive Committee of the Socialist Party to announce that it placed itself at the disposal of the

## THE GREAT WAR

*November 14*—Germans surrender East Africa. Baltic state formed of Livonia, Esthonia, Courland and Oesel Poland.

*November 15*—Polish officers take possession of Posen. British reoccupy Baku.

*November 16*—Belgians reënter Brussels. President announces taking over on November 2 of all marine cables.

*November 17*—Ludwig, King of Bavaria, abdicates. Americans and British start advance to Rhine.

*November 18*—Luxemburg chamber demands referendum on form of government. French enter Metz.

*November 19*—King of Belgians enters Antwerp. Kiev captured by Astrakhan Cossacks.

*November 20*—Americans cross frontier into Luxemburg. Germans surrender twenty submarines at Harwich.

new authorities. The Alexander regiment also went over to the revolutionists, and these two regiments, formerly the main reliance of autocracy, are now quartered in the barracks opposite the Royal Palace. These barracks were put up especially to guard the Palace, as the Kaiser made clear in his famous speech to the Alexander regiment at the opening of the barracks:

Like a strong fortress, your barracks rise in the immediate neighborhood of the palace, to protect which will in the first place be your duty. You are called indeed to act as the bodyguard, day and night, of your King and his house, and, if necessary, to risk life and blood for them, and if ever again, as in 1848, the Berlin people become insolent and insubordinate, I am convinced that you will decisively put an end to their insubordination against their King.

In Luxemburg the second chamber of parliament has assumed authority and resolved to submit the question of the future form of government to a referendum. The Grand Duchess is requested to abstain from all governmental action pending the referendum. The chamber rejected the motion, supported by the Socialists and Liberals, demanding the abdication of the Grand Duchess and the establishment of a

republic. The marriage of Rupprecht, former Crown Prince of Bavaria, with Princess Antoinette of Luxemburg, has been postponed.

## The New Regime in Germany

Premier Ebert has announced that an election for a constituent assembly will be held as soon as the soldiers get home and the electoral lists can be prepared, probably by February 2. Both men and women of twenty and over will have the vote on the principle of proportional representation.

The new German Government has announced freedom of speech and writing, the abolition of the censorship even for the theater, amnesty for political offenses, complete religious liberty, an eight-hour work day, and liberty to form trade unions even among state employees.

The entailed property of the Prussian Crown has been taken over by the Minister of Finance, Philipp Scheidemann. The personal property of the former King and his family is not affected.

Altho the revolutionary forces are organized on the soviet system, they are not, so far, imitating the Bolsheviks in attempting to establish a working-class dictatorship and repressing their opponents by force. The Berlin Government is exclusively in the hands of seven Socialists, but they represent both wings of the Social Democratic party. Four of them, including Premier Ebert and Scheidemann, belong to the Majority Socialists of the Reichstag, who in the main supported the Government during the war; and three, Barth, Haase and Dittmann, to the Independent or pacifist Socialists. Of these only Barth belongs to the Bolsheviks, or, as it is called in Germany, the Spartacus group of Socialists. Dr. Liebknecht, who was imprisoned for his attacks upon the Kaiser's Government during the war, is leader of the Spartacus faction of the Independents, but is said to be losing his influence. The Soldiers' Councils are supporting the Majority or moderate Socialists.

By the terms of the armistice Germany is handing over to the Allies ten battleships of her fleet, six battle cruisers, eight light cruisers, fifty destroyers and all her submarines. The U-boats, being under water, are of course invisible, but this diagram shows the shape and comparative size of the other craft.

Press Illustrating

## WITH THE EVACUATING GERMAN ARMY

This is one of the latest photographs to come thru Holland showing the effect of the armistice terms on the German army. These soldiers hauling down an observation balloon are evidently conducting the evacuation under the usual military discipline. In some parts of the German army, however, the officers fled after the downfall of the Imperial Government, leaving the soldiers to loot and barter as they pleased

The military authorities have in most instances accepted the new regime with apparent equanimity. The Soldiers' and Workers' Council of Cassel announces that Field Marshal von Hindenburg and the General Staff are under its protection. In the proclamation of the Council he is praised because "he did not abandon his people in their hour of trial." The red flag is said not to be so conspicuous as at first, and the old red, black and gold flag of the abortive revolution of 1848 has reappeared. The factories are again running and few disturbances are reported. In the conflicts that marked the transition from the old regime to the new in Berlin about 100 lives were lost.

## Solf's Appeals

Dr. Solf, the German Foreign Secretary, has been sending out wireless pleas to the American and Allied Governments for amelioration of the terms of the armistice in the interests of humanity. He asks for freedom of navigation on the Rhine and along the coast for the transportation of provisions. He also protests against the continuance of the blockade and requests that the Germans in the occupied territory on the left bank of the Rhine be allowed to continue their industrial pursuits and the shipment of coal, iron ore and potash. Otherwise, he says, "we shall inevitably advance toward more or less Bolshevik conditions which might become dangerous to neighboring states." He suggests that

American delegates could discuss with the plenipotentiaries of the German people the details of how the magnanimous help of America could save, in time, our Fatherland from the worst. Perhaps the matter could be put in the tried hands of Mr. Hoover, who has rendered such great services in Belgium.

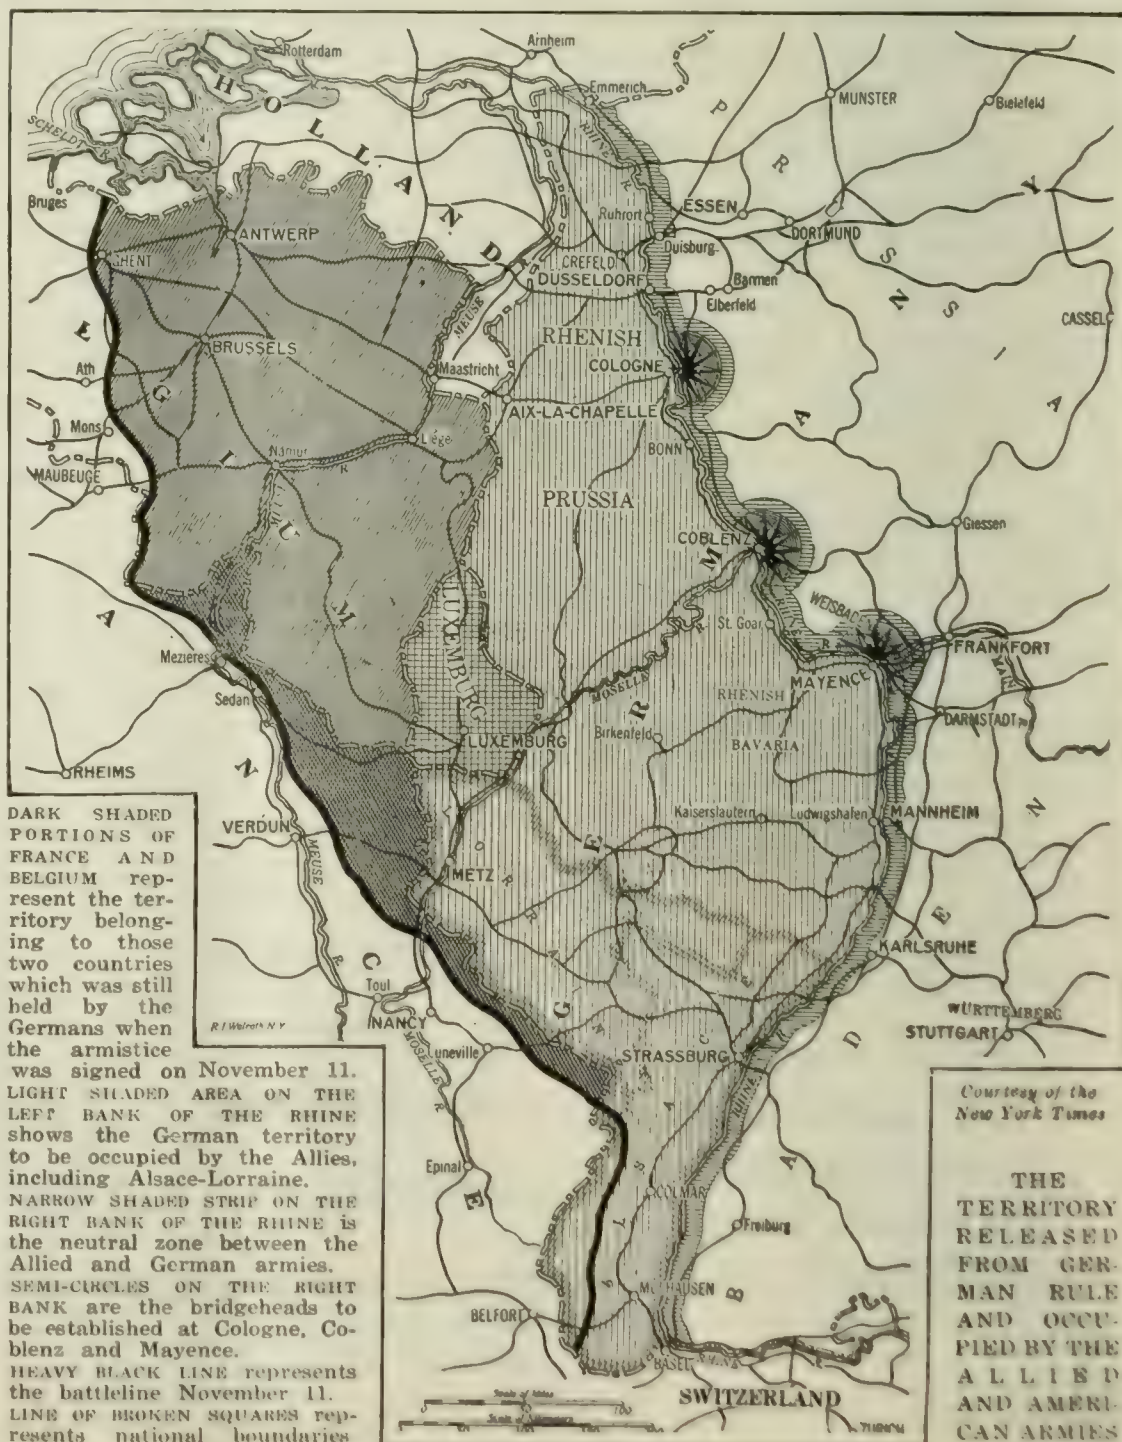

The acceptance of the oppressive armis-

tice conditions, the necessity of supplying from scanty provisions the armies that are streaming back from the front, the cessation of navigation in the North Sea and the Baltic by the continuance of the blockade, which imperils our provision supply, and the disturbed conditions in the east make the situation in our country daily more unbearable. The peril can be avoided only by the most speedy help.

Mr. Hoover has already sailed for Europe to take charge of the whole re-victualing proposition. Premier Clemenceau, Premier Lloyd George and President Wilson have all declared their willingness to relieve the necessities of Germany during the winter, but their present concern is with the inhabitants of the evacuated territory of France, Belgium and the Balkans.

Dr. Solf also asks a relaxation of the article in the Anglo-Turkish armistice requiring German civilians to leave the Turkish Empire immediately on the ground that this would compel the closing of the German hospitals and asylums for orphans, especially for Armenian children.

**The Return to Belgium** The Belgian Government, which has had its seat in Havre, France, since the fall of 1914, has now returned to Belgium and soon will be reestablished in Brussels. Great preparations are being made for the entry of King

DARK SHADED PORTIONS OF FRANCE AND BELGIUM represent the territory belonging to those two countries which was still held by the Germans when the armistice was signed on November 11. LIGHT SHADED AREA ON THE LEFT BANK OF THE RHINE shows the German territory to be occupied by the Allies, including Alsace-Lorraine. NARROW SHADED STRIP ON THE RIGHT BANK OF THE RHINE is the neutral zone between the Allied and German armies. SEMI-CIRCLES ON THE RIGHT BANK are the bridgeheads to be established at Cologne, Coblenz and Mayence. HEAVY BLACK LINE represents the battle line November 11. ## LEADERS IN THE NEW GERMAN CABINET

Last week we published in The Independent photographs of Friedrich Ebert, Chancellor of Germany now, and Philipp Scheidemann, Secretary of Finance and Colonies. Above are three other members of his Cabinet: (left to right) Wilhelm Dittmann, Secretary of Demobilization, Transport, Health and Justice; Hugo Haase, Secretary of Foreign Affairs; and Landsberg, Secretary of Publicity, Art and Literature. Dittmann and Haase favor the Bolsheviki, the minority in the German Government now

Albert, Queen Elizabeth and Prince Leopold in the capital after their long years of exile. A detachment of cavalry pushing on in advance have occupied Brussels because of the disorders incident to the evacuation.

On the day of the signing of the armistice ten thousand of the German soldiers in Brussels threw down their arms and paraded the streets under the red flag and singing the "Internationale" and the "Marseillaise." The Belgians crowded around, cheering and joining in the singing. The Germans responded by waving the French, Belgian and American flags, then marching to the headquarters of the German kommandatur they tore down the German flag and trampled on it and raised the red flag over the building. Many of the French and Belgians fraternized with the German revolutionary soldiers, but the Belgian Socialists refused their invitation to join with them in setting up a republic.

When the mutineers met their officers they tore off their epaulets and seized their automobiles. Some of the officers were killed and others went into hiding or escaped in civilian clothing. During the following days the disorder increased. Some of the soldiers took to looting and many got drunk. A dozen Germans with revolvers entered the Allard Bank and held up the cashiers for \$25,000. In some cases the German officers court-martialed and executed soldiers committing acts of violence on civilians, but in general discipline was abandoned. Some ninety Germans, mostly officers, were shot in conflicts between the loyal and mutinous troops. There were numerous fights between the French-speaking Belgians and the pro-German Flemings.

Burgomaster Max of Brussels, released from fifty months' imprisonment in Germany, has returned to Brussels and was given an enthusiastic reception at the Hotel de Ville when Acting Burgomaster Le Monier turned over to him the office. The Belgian Coalition

War Cabinet has resigned and Leon Delacroix has been chosen by the King to form a new ministry.

## British Army Losses

British casualties during the war totaled 3,049,991. Of this number the officers killed, wounded or missing aggregated 142,634 and the men 2,907,357.

The total of British losses in killed on all fronts was 658,665. Of these 37,836 were officers and 620,829 were men. The total British wounded in the war reached 2,032,122. The losses in missing, including prisoners, totaled 359,145. The figures given include troops from India and the Dominions.

The total casualties in France were 2,719,652. Of this total 32,769 officers and 526,843 men were killed and died of wounds or other causes. The aggregate British losses in the Mesopotamian campaigns were nearly 100,000, the total being 97,579. Of these the fatalities were 31,109, comprising 1340 officers and 29,769 men. The Dardanelles expedition cost the British 119,729 casualties. Of this number 1785 officers were killed or died and 31,737 men. On the Salonica front the losses were 27,318. In Egypt the total losses were approximately 58,000. In the East African campaign the total casualties were 17,825. In Italy the British losses totaled 6738. In other theaters the total casualties were 3297.

In addition to the grand total of deaths there were 19,000 deaths from various causes among troops not forming any part of the expeditionary force.

## Unrest in Holland

The revolution in Germany has affected all contiguous countries in some degree. In Holland, where the shortage of food has been stringent, especially since the seizure of the Dutch ships by the Allies and America, a serious rising was threatened. Queen Wilhelmina is personally not unpopular and she has admittedly shown considerable skill in

maintaining the neutrality of her realm in spite of pressure from both sides. But her German consort was not liked from the first and has been regarded with suspicion during the war. The act of the ex-Kaiser in taking refuge in Holland has embarrassed the Government, altho it does not appear that he was invited or would be protected in case the Allies decided that international law authorized his extradition. But his presence has increased the anti-monarchical sentiment, which the Socialists are trying to fan into flame.

The leading agitator is Pieter Troelstra, who is in close touch with the German Socialists. A few months ago, after having visited Berlin for conferences with Scheidemann and others, he tried to get to England in order to convey to the British Labor leaders what the Germans thought of their peace proposals, but the British Government refused to allow him passage. Troelstra openly declared in Parliament that the time had come for the workers to assume control of the Government as they had in Germany and that the army and police would take their side. David Wynkoop went further and, denouncing Troelstra as bourgeois, demanded the immediate abdication of the Queen and a general strike of workingmen and mutiny of the soldiers. But the only result so far of these incitements to violence was a riot in Amsterdam in which five persons were killed and thirty wounded. In order to relieve the distress and danger the Allies have diverted to Rotterdam a ship, the "Adra," carrying 7100 tons of wheat, and the Government has raised the bread allowance from 200 to 250 grams a day.

## The Position of the Bolsheviki

In November, 1917, the Bolsheviki wrested the government of Russia from Kerensky and dismissed the Constituent Assembly. It was commonly predicted at the time

Courtesy of the New York Times

#### RETRIBUTION

Forty-seven years ago Bismarck imposed upon France, at Versailles, crushing conditions of peace. This historic occasion, with Bismarck stating his merciless terms to the representatives of France, Thiers and Favre, was duly depicted by a German artist, C. Wagner, in the well-known painting reproduced above. Now retribution has come upon the German Empire for its development of the policy initiated by Bismarck. An American artist here puts into pictorial form the punishment which the Germans have brought upon themselves, substituting the stern and just Foch for the arrogant and merciless Iron Chancellor, and William Hohenzollern and Hindenburg, overwhelmed by retribution, for the two French statesmen to whom Bismarck dictated his cruel terms

that they could not remain in power more than two weeks and the despatches have told us continuously ever since that the Bolsheviks were daily weakening and must soon be overthrown. In fact it was reported at one time that Lenine and Trotzky had been forced to flee from Moscow and had taken refuge on a warship at Kronstadt. But a year has past and they are still in control, altho we are still told that they have not many days to last.

The question is how the change in Germany will affect their fortunes and this it is not yet possible to determine. On the one hand it means the spread of their influence westward and southward, but on the other hand it means that the Allies can now enter the Baltic and so invade Russia from the west as they have already from the east, north and south. The news of the revolution in Austria and Germany caused wild rejoicing among the Bolsheviks. The news of the German rising was published in the Bolshevik press before it was known in America and was telegraphed to this country as an amusing example of a Bolshevik canard. Scheidemann, who, according to the Sisson documents, aided the Bolsheviks to power is now at the head of the German republic, and the German cities are controlled by soviets of the Russian sort. The armistice requires

Germany to abrogate the Brest-Litovsk treaties and this relieves Russia of what Lenine called "the brigand peace." The soviet Government has accordingly stopped the payment of instalments of the indemnity of \$1,500,000,000 in cash and produce which Germany imposed upon Russia. The Brest-Litovsk treaty with Turkey was declared null and void by the soviet Government the 1st of October.

The withdrawal of the German troops from the Ukraine has deprived the Kiev Government of its support and it is reported that the Bolsheviks are again getting control of the Ukraine, from which they had been expelled by the Germans. This will prevent the movement announced a month ago for the establishment of a Ukraine monarchy by the new Landtag.

The Bolsheviks now seem disposed to come to terms with the Allies and America. Foreign Minister Tchitcherin in October address this note to President Wilson:

As a condition of the armistice during which peace negotiations shall be begun, you in your note to Germany demanded the evacuation of occupied territories. We are ready, Mr. President, to conclude an armistice on this condition and request you to inform us when you intend to withdraw your troops from the Murman, Archangel, and Siberia.

It is reported from Washington that our Government will pay no attention

to this, but that the Bolsheviks must address such to the Omsk Government, as that is the only Government in Russia recognized by the Allies and the United States.

Tchitcherin has telegraphed to Prague that he will permit the Czecho-Slovaks to pass thru European Russia to their own country provided they will disarm. The Czecho-Slovaks have of late been losing ground. They have been driven out of Samara and almost out of Europe. But the arrival of Allied and American forces and supplies at Omsk will doubtless prevent the Bolsheviks from advancing farther east than this. The Siberian Railroad, however, is not altogether free from molestation. A train of forty-two cars carrying ammunition and twelve Japanese to Omsk was blown up west of Irkutsk and a rising of Bolsheviks at Tomsk, which is east of Omsk, was put down after hard fighting in which 300 Bolsheviks were killed. The recovery of the Volga River from the Czecho-Slovaks will make it possible for Petrograd and Moscow to get grain from the south and if the Bolsheviks can also draw food from the Ukraine they will be somewhat relieved of the fear of famine, which has been their chief danger. The Bolsheviks are attacking the fortified positions held by the American and Allied troops on the Dvina River near the confluence of the Vaga.

The dictatorship of the Ukraine established by the Germans at Kiev is reported to be overthrown by the Astrakhan Cossacks under General Denikine, Chief of Staff under the Czar's Government.

#### A RED CROSS MISSION TO THE BALKANS

As part of its plans for the relief of the starving peoples of Europe this winter the American Red Cross has sent a special mission to the Balkans to give broader scope to the work of the Red Cross men and to expedite the distribution of supplies there. Henry W. Anderson, who heads the mission, has been director of the Red Cross in Virginia and, since 1917, chairman of the Rumanian Commission of the American Red Cross, with the rank of lieutenant colonel

© Clinedinst, from Underwood &amp; Underwood

**LEADING THE ARMY OF OCCUPATION**

Major General Joseph T. Dickman, commander of the 3rd American Division, is in charge of the American army of occupation which is marching into Germany. In this army are included the 1st, 2nd, 3rd, 4th and 5th divisions, which are of the Regular Army; the 26th Division, made up of the New England National Guard; the 32nd Division, made up of state troops from Michigan and Wisconsin; the 89th Division, in which are drafted men from Kansas, Missouri, South Dakota, Nebraska, Colorado, New Mexico and Arizona; the 90th Division, composed of drafted men from Texas and Oklahoma; and the 42nd or famous Rainbow Division, made up of the National Guard from twenty-six states. General Dickman's special qualifications for command of the army of occupation include a thorough knowledge of the German language and of German affairs. When Prince Henry of Prussia visited America, General Dickman, then a captain, was assigned to accompany him on his travels.

**Demobilization** The demobilization of the American Army is the first important result of the surrender of Germany. No fighting troops have been sent to Europe since the armistice was signed, and the plans for this contingency made by the foresighted General Staff are going into immediate execution, beginning with the troops in this country, which number about 17,000,000. These will be mustered out rapidly, leaving the cantonments to be occupied by the men returned from Europe during the necessary formalities attending their discharge. It is expected that by the first of December the Government will be able to discharge 30,000 men a day. Secretary Baker announces that the first to be mustered out will be the seventy-one Development Battalions, containing nearly a hundred thousand men, the conscientious objectors who are doing noncombatant work, the spruce division in the Northwest, and those regiments that are training in England. The larger part of the men in the central training schools for officers; the United States Guard now numbering 135,000; the railway and replacement units, depot brigades, and the combat divisions will follow in order, preceding the regular troops.

Meanwhile the army in foreign lands will be brought home as fast as conditions abroad justify relieving them and ships are available for their transportation, a problem that the Shipping Board has said presents greater difficulties than were encountered in sending the

force to Europe. It is anticipated that among the first of the Expeditionary Force to come back will be those divisions that have been there longest and have done the most fighting, and they may be returned before the end of the year.

The Government intends to demobilize each unit, as far as practicable, in its home community. A month's extra pay and certain allowances will probably be granted every discharged soldier, and the effort will be made, thru the draft boards, Government employment agencies and similar channels, to find employment for all who need it, and aid all to become peaceably reabsorbed into the social life of their communities.

**Reassembling after the  
In Congress Election Day recess,  
Congress took up vari-**

ous matters in abeyance. In the Senate the Finance Committee received on November 14 a letter from the Secretary of the Treasury suggesting that in view of changed conditions it was advisable to reduce the amount intended to be raised by taxation under the House Revenue bill to \$6,000,000,000; and on the next day it listened to a personal explanation of his letter by Mr. McAdoo. On November 15, Senator Norris proposed an amendment to the Senate rules striking at the principle of seniority in assignments to important committees. He contended that the eight committees that handle virtually all the important affairs of the Government were composed to a great extent of the same men, constituting a sort of interlocking directorate, who were there only because of longer service in the Senate than other men of greater specific fitness. His resolution prohibits the chairman of any one of these committees, after March 4, 1919, holding a seat on any other one.

On November 18, the Senate passed, with little debate, after striking out the Pomerene "anti-profiteering"

clause, the Agricultural Emergency bill, which carries the prohibition rider. This law, when signed by the President, prohibits the use of any edible substance for the manufacture of alcoholic beverages after May 1, 1919, and the sale (except for export) of spirits, wine or beer after June 30 next, until the end of the demobilization of the military forces.

Senator Lodge introduced on the 18th a bill providing for full publicity for all those handling German or Austrian goods hereafter. It does not forbid the selling of goods made in those countries, but requires public notice that the merchant makes a specialty of such wares.

A conference of the Republicans in the Senate was held on the 19th, fully attended, in which a resolution was unanimously approved to the effect that "the Congress should assert and exercise its normal and constitutional functions, including legislation necessary for reconstruction." This conference, in which no factional question was raised, also adopted a plan to provide for six joint committees to deal generally with the subjects of demobilization, foreign trade, interstate transportation, domestic business, relations of employers and employees, and national resources.

**The President** The suggestion that the President might go to Europe in order to take part in the consultations preliminary to an international peace conference soon revealed itself as a settled purpose, announced from the White House as follows, on November 18:

The President expects to sail for France immediately after the opening of the regular session of Congress, for the purpose of taking part in the discussion and settlement of the main features of the treaty of peace. It is not likely that it will be possible for him to remain thruout the sessions of the formal peace conference, but his presence at the outset is necessary in order to obviate the manifest disadvantages of discussion

**THE BEST CHRISTMAS PRESENT FOR THE BOYS**

Salem, Massachusetts, set this example of having moving pictures taken of the home folks to send to their soldiers at the front. Wives, mothers, fathers, brothers, sisters, friends of the men in France all assembled on the common one Sunday afternoon and marched smiling past the camera that recorded their message to their boys, to be shown later in "Y" huts in France under the auspices of the Community Motion Picture Bureau of New York.

by cable in determining the greater outlines of the final treaty about which he must necessarily be consulted. He will, of course, be accompanied by delegates who will sit as the representatives of the United States throughout the conference.

The list of these delegates has not been published, but it is supposed to include Secretaries Lansing, Baker and Houston, Louis Brandeis, Charles E. Hughes and Elihu Root. It is reported that the President will be accompanied by Mrs. Wilson and a personal staff, and will prolong his stay sufficiently to do everything possible to insure that his sentiments on certain points are incorporated in the peace arrangements.

#### Mr. Gompers' Forecast for Labor

The meeting of the Pan-American Federation of Labor, at Laredo, Texas, November 13-16, closed with an address by its president, Samuel Gompers, in which he outlined the attitude of organized labor toward the problem of social reconstruction. He predicted a worldwide federation of labor, whose purpose and results would be constructive. He declared, however, that employers must understand that their absolutism in industry had gone, just as had absolutism in government. Then followed a manifesto, which has led to much comment for and against its spirit, reported in the following language:

The American labor movement will cooperate with all other agencies to help in this reconstruction time. Our movement is not to destroy but to construct, and all may just as well understand that the advantages which the workers of America and of the Allied countries have gained, and which we hope to extend to the people of the conquered countries, are not going to be taken away from us, and we will resist in that attempt to the uttermost.

#### The Cable "Seizure"

The country learned on November 18 that the Government had taken control of all the marine telegraph cables by proclamation of the President dated November 2, and had placed them in charge of the Postmaster General. This action was explained as made necessary by the jealousy and lack of coöperation between the several cable companies, whereby congestion and delays occurred that were embarrassing to the Government, and by the particularly important need of direct, certain, and quick communication of diplomatic messages now. The news was received by the public with misgivings, and by the cable companies with decided protests. Clarence H. Mackay, president of the Postal Telegraph System, said that the action appeared to be "a preliminary step toward Government ownership," which he thought "unwise at this juncture." He affirmed that the cables had been doing the best of which they were capable, and that Government control "would merely disorganize the systems, and cause a heavy expense" to the country.

On November 20 the Postmaster General announced the consolidation of the Western Union and Postal Telegraph companies, effective December 1, in order that the telegraph facilities may be used to the fullest extent and the transmission of messages expedited.

#### Revenue Reductions

The revenue bill for raising eight billions by taxation, sent to the Senate by the House some weeks ago, has been cut down by the Senate Finance Committee to \$6,300,000,000. On November 14 a new factor was introduced by a letter from Secretary McAdoo, followed by a personal talk next day with the committee, recommending a further reduction to \$6,000,000,000, and the speedy enactment of the measure. The Secretary estimated that expenditures by the Government during the current fiscal year would be eighteen, instead of

© Harris & Ewing

#### CONTROLLER OF COMMUNICATION

Now that the marine cables as well as the telephones and the telegraph systems have been ordered under Government control, Postmaster General A. S. Burleson is virtually the dictator of all means of communication in this country and to and from it. For the most part the organizations put under his control are being operated as they were before the war; the Western Union and Postal Telegraph companies, however, have been ordered consolidated into one

twenty-four billions, as heretofore thought. He also favored a continuation of the policy of lending money to the Allies for a limited time, to enable them to make purchases of us. Other recommendations were:

That excess profits tax rates for payments due next year be no higher than those in the existing law.

That necessary safeguards be provided for war and excess profits taxes in the form of adequate provisions for amortization, conservative valuation of inventories and ascertainment of minimum income which shall be exempted from the tax to insure the taxpayer against injustice and avoidable injury.

That war and excess profits taxes be eliminated entirely for payments due in 1920 except with respect to profits on contracts negotiated during the war period.

That corporation and individual income tax rates be increased on incomes of 1919, payable in 1920.

That the basis for next year's taxes payable in 1920 be determined now, and provisions made to meet a minimum revenue of \$4,000,000,000 for 1920.

Some of these suggestions were at once opposed by Republicans on the

committee and elsewhere who declared that the ways of raising revenue after the Republicans assume control of the next Congress must be left to that party in free action. The Secretary's principal plea in support of his proposals is the desirability of letting business men know what to expect in the near future.

#### Cuba's Electoral Difficulties

The general elections in Cuba in the first week of November exhibited again the inadequacy of her electoral law, which is causing the Government and well-wishers of that republic serious anxiety. The looseness of the provisions of this law caused it to be condemned at the beginning by far-sighted patriots. The previous elections had almost been ignored by the Liberals, and comparatively few of the Conservatives voted. The law provides no safeguards against repetition and substitution of votes, or against fraud in the secret counting of them, so that no one has confidence in the integrity of the returns. President Menocal's desire for fair elections is undoubted, and it is taken as certain that he will struggle for reformation in the next Congress. Vice-President Nunez speaks of the situation as the gravest crisis which Cuba has ever encountered, and announces his determination to apply his whole strength to supporting the Maza y Arola bill, which is calculated to do away with the present evil. The three important features of the Maza y Arola bill are these:

First—The vote is to be obligatory upon every one entitled to it, so that the electors will not turn their backs on the polls.

Second—Finger prints and photographs shall be used to identify the elector and prevent ballot stuffing, which has been such a curse to Cuba.

Third—The counting of the ballots shall be done publicly.

#### Stefanssen's Arctic Work

One of the most interesting occurrences of the week was the return from the Arctic regions of Vilhjalmur Stefanssen, who reached New York on October 30. He had spent more than five years on the extreme northern coast and islands of this continent, at the head of a remarkably well constituted expedition sent out for scientific investigation by the Canadian Government; and, in addition to obtaining a great amount of useful information respecting the geography, hydrography, ethnology, and mineral and animal resources of that almost unknown country, he added to the map five new islands, one as big as Ireland.

A part of the expedition, under Stork Storkersen, has remained there, and is supposed to be now drifting on a great ice cake across the Polar Sea. Its object is to determine the force and direction of a current believed to flow westward from north of Alaska, and to make soundings, etc., along its course. It is expected that this current will take Storkersen and his four companions to the vicinity of the island New Siberia by the end of next February, whence they will travel over the ice to Siberia, and homeward during the summer.

SOME weeks ago James M. Beck, speaking before a Philadelphia audience, said that when the time came to present the bills for the loans the United States has made its allies, it would be a great privilege if we could cancel those debts saying, "These have been paid in the blood of your sons."

Such generosity, however laudable, will doubtless be out of the question because of the size of the debts and because we, too, are paying in the blood of our sons. Yet the situation has an aspect that we cannot afford to neglect. If the United States is to live up to the humanitarian principles it has established in this war, if we are to maintain our idealistic leadership, our work at the peace table in respect to our allies must be more than an adjustment of territory and of international finance.

The cessation of hostilities will necessitate our presenting to the world a new and different proof of the validity of our national purposes. No greater opportunity will ever be offered than at the time we reckon up what France and England and Italy and Russia owe us.

The opportunity will be this: Instead of our allies paying back the entirety of the money they owe, would it not be feasible for them to spend some of the money for the education of their and our children in their countries and in ours?

There is a precedent for this. The refunding of a portion of the Boxer indemnity and China's undertaking to devote that money to the sending of Chinese students to American universities and schools has resulted in winning the esteem and respect of the

AUTHOR OF "LETTERS TO THE MOTHER OF A SOLDIER"

Chinese people and has given both nations the benefits of mutual understanding. Whatever other failures we may have made in our Far Eastern policy, this stands as an unquestioned mark of the sincerity of our national motives.

With this endowment as a basis, would it not be possible for the United States and its allies to invest in an educational entente to extend over the next 100 years?

A number of our colleges and universities already maintain fellowships in foreign institutions, which are awarded on a scholarship competitive basis.

Scores of graduates have benefited by these and by the Rhodes scholarships. At this writing, a system of exchange professors with universities of the Allied countries is in preparation, Columbia and Cornell leading the way. During the past few weeks several scores of French girls have arrived to complete their studies at American universities. Thus in various ways we are planning to inoculate ourselves and our allies against future attacks of Kultur. But why limit the opportunities to university training? Why not extend this international educational agreement to include the arts, the sciences and the higher forms of trades?

There is, for example, a Chicago girl whose voice has been trained in that city and who desires to study abroad. Having won a competitive scholarship, she chooses or has chosen for her a teacher or conservatory in Paris to continue her instruction. The teacher would be paid for her tuition and the girl

adequately supported for a stipulated period by the French Government.

Or, in Grand Rapids there is a cabinet maker who is desirous of perfecting himself in certain forms of his work. He may elect intarsia, dreaming to become a master inlay craftsman. For him the doors of the Scuola Reale at Sorrento would be opened, and support supplied by the Italian Government while he worked and studied there.

Or, from out our list of art students there may be those who desire and deserve the personal training of such masters as Brangwyn or Lavery. Can either master or pupil conceive of greater honor? [Continued on page 297]

One of the great freight yards in the East that has been taken over by the Government

# IS UNCLE SAM TO KEEP THE RAILROADS?

BY DONALD WILHELM

AUTHOR OF "THE STORY OF STEEL"

I asked the Director General of the Railroads, "Will the Government keep the roads?" The Director General answered easily—as easily as he made seven important decisions the other day while going down the elevator and then one en route to the carriage waiting to transmit him to the Secretaryship of the Treasury. He said, by inference, that, for Americans, prophecy means *forthtelling*, that his interest is focussed on the war results. He did not even intimate that the railroads might be a big issue in the most vital election we have ever had—our first Presidential election of international consequence—or that the roads and his record might be the issue of all issues if he is nominated President.

From the interviewer's approach, and retreat, and from the approach of the Senators who made the same advance, and retreat, it would have made so much better copy if he had said, "My dear man, it's all settled! We'll hang on to the railroads—you can tell the politicians to go hang!"

But he didn't!

Accordingly, what is left to do but to take such quiet measurement of achievement as we can and look to the results recorded by the Railroad Administration down to date?

The point of doubt, of course, is the bugaboo of Government ownership. There are individuals constitutionally for and against almost anything worth while—which is another way of saying that between memory of the good old times of private control—

"The good old times,

All times are good when old" and present-day progressions, there is a river, with two sides; between the shipper who used to use cars as warehouses, and the shipper who now gets two days' free service, then is charged three dollars a day, and more and more until it is ten dollars on the eighth day, and ten each day thereafter—

there is a river of doubt, a surging, ugly stream; and there are other rivers, breaking thru their barriers now and then, with a roar, and there are many more reserving their force until there can be no plea of patriotism—those that are being pent up, by the State railroad commission, for instance.

A train proceeding out of Detroit, bound west, about a year ago, started out with certain repinings about restricted, held-down rates for freight and passengers. When it got to the Indiana line it had to change its headlight and put on another kind—because the Indiana railroad commission said so. When it got to the Illinois line it had to change the size of its crew, let us say. When it got to the next line it had, as it were, to go thru a maze of rate differentials. And so on—thru all of forty-eight states, let us imagine. Now all the states—in honor of United States traffic—are wearing the uniform. There are uniform rate classifications; some 15,000 items have been classified anew, and rates are twenty-five per cent higher. And passenger rates are higher—three cents a mile, now, in interstate traffic, three cents and a half if one buys a Pullman ticket. The very engines are becoming uniform—no one knows just how many types and descriptions of engines there were, but it is estimated that there are many more than a thousand. Now there are only eight standard ones being manufactured for all the 300,000 odd miles of Government-controlled line, the major portion of the total 397,014 miles of American single-track line. And cars are uniform—there were literally a couple of thousand types; now there are only twelve types of freight car being manufactured for the Government lines. On the 2,100 odd Government lines—all there are except

about 800 short ones not taken over—supplies are uniform.

Accounting methods are uniform, thanks to the work of the Interstate Commerce Commission, heretofore. Now statistical methods are being made uniform. Wages are uniform, on all the Government lines—and they are higher, a great deal. Hours are uniform, and shorter, generally. There is a uniform lack of press agencies—Mr. McAdoo maintains the only one, which is essential, no doubt. There is a uniform lack of the traffic departments, which furnished the niceties of passenger travel and obligations to shippers—the Government abolished them, took over the operation of the roads only, and left the corporate organizations where they were, handling fiscal and similar matters. In doing that it reduced the number of railroad officers receiving \$5000 or over from 2325 to 1925—a reduction of 400, constituting a saving of \$4,614,889 a year. On the other hand, it established seven Regional Directors, who receive from \$40,000 to \$50,000 a year, and a goodly group of Federal Managers receiving from \$13,000 to \$30,000 a year, but, since, under private control, there were salaries greater than that of the President, salaries ranging as high as \$100,000 a year, the saving accomplished is considerable and, the Railroad Administration affirms, efficiency has not been impaired. The four millions saved in the reduction or transfer of 400 officers receiving \$5000 or more has been contrasted freely with the increased expenditure, mounting high into millions, that resulted from a minimum advance of two and one-half cents an hour in the pay of common labor, an advance that ranges from forty-three per cent in the case of employees drawing the lowest monthly wage, up to nothing to those receiving \$250 a month. The advance affected machinists, boiler makers, blacksmiths, sheet metal workers, electrical workers, car-

men, moulders, others—a group of about 500,000 of the 1,700,000 railroad employees of the Administration. Moreover, another added expense came in reducing the hours of labor to the union standard of eight hours a day, with time-and-a-half for overtime—a reduction that affected virtually all railroad employees, and impels, of course, an increase in personnel.

But, on the other hand, the railroads, if left under private control, would, without question, in this time of labor union perfection and labor scarcity, have had to increase wages and reduce hours. These changes would not have been achieved, probably, except by many a hard fight. But Mr. McAdoo has had no fight. So we strike on one of those indeterminate factors which trim the edges of argument and, going to the heart of things, make us realize that conclusions are out of order. We don't know what troubles the railroads would have had, what the cost in terms of war's progress and what the loss in economies, would have been; we do know that Mr. McAdoo invested many millions a year and as a result got sustained, and perhaps will get, uniformly enthusiastic production, which in terms of railroads means movement of passengers and of freight.

As soon as we mention those measurements we begin to look at the situation nationally—probably shrewd Mr. McAdoo has written it down in his secret book of axioms that if public attention is called often enough to a national view, after a while it will get the habit—and there ends private ownership.

The record, in terms of passengers and of ton miles, that is being made is astounding. And it is this record which, in the end—if we get and keep the national point of view—will keep the railroads under Government management.

Let us look at just a few of the illustrative figures that go to show that both the freight and the passenger business of the railroads is greater than ever before.

In some regions the increase in passenger service—due primarily to the transport of soldiers and of soldiers' friends—is nearly 50 per cent greater than ever before. In the Southern District, for instance, the increase in July—figures for which are the very latest—amounted to nearly 50 per cent over that of a year ago, and in the Pocahontas District, in which is Washington, D. C., the increase was about 40 per cent and the Southwestern District recorded an increase about similar. This increase, nationally, is in the ascendancy still—and between getting soldiers off to Europe and getting them back again the figures are likely to keep to the ascendancy. Study of the freight carried shows that tho the amount of total freight carried for the first six months of governmental administration was a fraction of 1 per cent less than in the same months of the preceding year—due to weather that thermometers will never forget—in July the total ton miles of freight carried passed the total for the pre-

ceding July, by 4.4 per cent. But the total number of freight car miles was 5.2 per cent less. Why? Because the cars were loaded fuller, thanks to the abolishment of any disposition to favor particular shippers by sending for them less than full carloads. And there were 1.2 per cent less train miles, 1.5 per cent more locomotives in use carrying freight, but 4.3 per cent more in or awaiting shop. All this spells out bigger carloads, bigger trainloads—efficiency, in a word—exactly the kind of efficiency that makes up for shortage in locomotives and cars, and substitutes itself for the purchase of equipment when equipment costs a tremendous deal more than it has ever cost in the history of railroading.

Add to this that in many instances the saving in the routing of freight and of passengers between given points has been decreased from 200 to 500 miles, and we get another advantage operating nationally. To take a specific instance, in sixty days about 9000 cars being operated between two western cities were so routed as to effect a sav-

ing of 195 miles in the mileage traveled by each car each trip, which means a saving of 1,754,644 miles, which at six cents a mile means a good round \$100,000 saving on just one little patch of the 379,014 miles of United States track heretofore owned and operated by 2905 separate companies.

These paragraphs are illustrations. They are not studies. Consequently it is permissible to plot another curve by way of illustration: The Railroad War Board, in May and June of last years, moved more freight than has been moved in any two months before and only recently equaled since. It made a tremendous showing. That board, with the best railroad talent in the world, jacked our transportation vehicle up, and up, and up—until it rolled over into the ditch and howled to Garfield and Pershing that the end of the world had come. The Railway War Board discovered bitterly, in short, before a patient public that, in an emergency organizations can be stretched from 95, say, to 110, and from 110, say, to 115, and then, like a rubber band they snap and go to perdition. Consolidation had to be called in to gather the fragments together. Stated bluntly, this means that when put to the test the railroads came up to mark and then fell off. Since then, under governmental administration, they have come up to mark and passed it and in carrying power and in many almost innumerable efficiencies are still in the ascendancy. Figures do not lie, the record no one can escape: Under governmental management the roads have done something—and are doing it better and better all the time—that under private ownership they could not do.

And they are doing it by using the very talent, indeed only part of the very talent, that failed to do it before. On January 6, six days after the Railroad Administration took hold, 213 ocean-going steamers were lying idle in New York Harbor awaiting either cargo or bunker coal. The U-boats were at their worst; the late Lord Rhondda, Food Controller of England, cabled: "Unless America can increase in January the quantity of supplies sent in December I am unwilling to guarantee that the Allied nations can hold out." At our Atlantic ports cars under load were backed up on sidetracks for miles, until railroad officers desperately were dumping perishables out on the ground. Two million tons of freight—44,320 carloads—were piled up at port terminals. And then the compact little organization called the Railroad Administration, which has office space in Washington not in total amount more than many individual railroads had, began to hammer at the mountain to get it moved. They sent out orders, gave the regional directors all the freedom in the world, seeing to it, by the way, that the whole mesh of priority makeshifts was thrown into the Atlantic. The regional directors began to hammer at the mountain. Month by month, as they got the congestion down, the quantity handled went up. [Continued on page 302]

W. G. McAdoo, director general of railroads

# WINNING 4796 NEW CHURCH MEMBERS

**F**OUR thousand seven hundred and ninety-six additions to Toledo's churches in a four months' campaign! Remarkable? No. Interesting? Yes—*very*. And *gratifying*—tremendously so—because it simply exemplifies once more the cosmic power of advertising to move the world—the world of spirit as well as the world of commerce. When a Federation of Churches maintains a "drum fire" of advertising of all kinds—newspapers, street cars, bill boards, moving picture slides, window placards, hand cards, letters, direct mail advertising, etc., etc.—in a brief but whirlwind campaign to "broaden the base line" of its member churches, it makes a story worth the telling; especially when it

(a) Exceeds the quota of results (new church members) set at the start of the "drive" as the objective.

(b) Makes it a pay-as-you-go campaign by taking in enough money to almost cover the expenses.

Time was when advertising was looked at askance by conservative church boards. And some of the ante-diluvian crustaceans on those boards (because there are still a scattering of them left, mostly of the old school, of course) still rather maintain that Stone Age perspective—call church advertising undignified, and all that sort of thing.

But that view is fast being pushed into the limbo of the dead and gone. The last decade has seen church advertising forge into its own. The Church Advertising Department of the Associated Advertising Clubs of the World is doing yeoman work in this valiant service. The advertising activities of Rev. Christian F. Reisner, the titular head of that department and the impetus they have given his New York church have proved a revelation.

Several more or less authoritative works have been written on church publicity that attempt to cover the field in its entirety—over, under, around and thru; in fact, most of them try to cover so much that they are not specific enough. They are like Uncle Joe Cannon's characterization of the Democratic platform some years ago, during the presidential campaign when Alton B. Parker was running against Roosevelt. Uncle Joe said: "The Democratic platform reminds me of a Mother Hubbard dress—it covers everything and touches nothing!"

The trouble with church advertising is that up until now it has had to spend almost all its energies in pioneering. And the job was no pink tea. There were practically no stretches of easy going—it was just like blasting thru the solid rock all the way. Everybody who was not "fur it was agin' it"—there were no middle grounders. As near as I can diagnose the trouble, it labored under the handicap of being misunderstood. Advertising was considered too much of a *commercial* force to be utilized as force for the kingdom of God.

BY WILLIAM N. BAYLESS

And when you come to get right down to analysis, we usually *do* think of it only as a business force. Stop the first ten men you see on the street and mention *advertising* to 'em—it's dollars to iron washers that they instantly think of it as a means of *selling goods*.

But we now know that advertising has scarcely nicked the surface of its field of usefulness and that commerce is only one segment of that vast field. We now know that the broader definition of advertising is that it is a force for influencing people's minds and mov-

ing them to take a given course of action; that action may be to vote for a certain principle, to abstain from eating certain foods, to go to church on a certain day, to support a certain cause or simply to believe a certain doctrine or propaganda. The course of action need not confine itself to filling out a coupon clipped from an ad, or rapping on the dealer's counter to attract the attention of a clerk nonchalantly man-icuring his nails.

Elbert Hubbard called advertising "a cosmic force as irresistible as the force of gravity." Gerald Stanley Lee in his latest book calls it the most powerful thing in the world today! Given a generous measure of it and sufficient time and you can mold and shape human opinion, you can warp civilization itself for good or ill. It is said that advertising reelected President Wilson—the posters and the magazine and newspaper display. It is beyond argument that it has won for prohibition in several state elections. In its earlier and cruder forms it made states and set up dynasties. When hard prest by the Roman Senate Cæsar more than once

appealed to the people by advertising on the walls of Rome.

Gerald Stanley Lee's daring in boldly affirming that advertising is the most powerful force in the world challenged my attention. It made a very deep impression upon me. So when I was appointed a member of the executive board of the Inter-Church Federation of Toledo and asked to head the Commission on Evangelism I demurred unless I could get an adequate advertising appropriation to carry on the work. As chairman of that committee, I knew that I must needs assume responsibility for the results from the forthcoming city-wide evangelistic campaign. And I felt that if anything would put the campaign across it was advertising. So I got my appropriation first.

Then our committee met and planned out the various moves in our campaign, down to the minutest particulars, appointed the subcommittees to carry them out and finally determined upon the quota of results (accessions to the churches) that we thought possible to attain, the objective toward which we would aim. Then we gathered all the material together and printed it in a comprehensive four-page program, together with the personnel of the committees. This large program, 8½x11 inches when folded, formed a sort of "bill of particulars" of all the activities of our commission—put us on record in a public way as to the line to which we proposed to hew.

The activities we laid out for our work covered an intensive, high-pressure campaign starting with a New Year's Eve Watch Night Service on December 31, 1917, to usher in the new twelvemonth, and extending up to Easter. The Calendar of Events on the program was as follows:

#### CALENDAR

##### THE INTER-CHURCH FEDERATION OF TOLEDO

December 31, 1917—Watch Night Prayer Service.  
January 6-13, 1918—The Week of Prayer.  
February 1, March 31—Pastors' Catechism or Communion Classes.  
February 11-18-25 March 4—Personal Work Classes.  
March 3—Go-to-Church Sunday.  
March 10—Sunday School Decision Day.  
March 10-17—Cottage Prayer Meetings.  
March 11-23—Down-town Theater Meetings.  
March 17-31—General Evangelistic Drive in all churches.  
March 31—Easter.

This program was predicated on a *cumulative* series of events growing in both importance and interest as the campaign proceeded, culminating in a great city-wide evangelistic "drive" just before Easter, all churches in the city participating.

In three of the feature events on this program, advertising was used intensively and extensively as follows:

##### WATCH NIGHT PRAYER SERVICE

The only extra form of promotion used in this feature of the program, other than the usual church effort, was a series of terse pungent little four minute addresses delivered by a [Continued on page 300]

### MAKING CITIES LIVABLE AGAIN

These American troops are cleaning up the debris in a corner of Chateau-Thierry, the name that they made memorable in the victorious battle that began the Allied advance last July. In the photograph at the top of the page are French soldiers working to clear away the wreckage of their homes from the streets of Roye.

### THE CANADIANS POLICING CAMBRAI

Fires set by the retreating Germans were still burning when this photograph was made. The British took Cambrai after heavy fighting

# WHEN ENGLAND WAS AT BAY

BY HAMILTON HOLT

GERMANY began her great offensive on March 21 while our convoy was in the middle of the ocean. Eight days later we disembarked from our steamer, which I may now say was the "Adriatic," at Liverpool. Our troops, who were the first to cross the companionway, left immediately in the special train awaiting them for an untold evacuation camp and we civilians, after passing thru the formalities of the Customs House and Scotland Yard, betook ourselves to the city to walk about and see the sights prior to our departure for London on the early afternoon train. Liverpool was enveloped in a good old Scotch mist and as the day was Good Friday the streets were all deserted and the shops closed. Our first glimpse of Mother England was a rather forlorn one. The prospect of being able to see anybody or do anything until the following Tuesday was out of the question, for all England was taking four days off on account of the Easter holidays, and holidays, like afternoon tea, is a British institution that only a German invasion would be able to suppress.

After our walk we attended a Church of England service and then went to the railroad, where we found a regiment of New Zealand boys waiting to be taken to their camp. What a magnificent set of fellows they were—tall, lithe, bronzed and each with a red-banded sombrero hat which looked very much like the ones our American boys love so well, but which have now had to be discarded for the more unbecoming caps. I have since seen the English, Canadian, Australian, South African, Italian, French, Belgian, Russian, Portuguese and American armies in rest and in action, and I have no hesitation in saying that the New Zealand boys are the finest appearing troops of all. They had come over in a trim little ship that had proceeded thru the Panama Canal and joined our convoy at its rendezvous in New York. Except for a day's shore leave at Newport News they had been six weeks on shipboard since they left home. Their little black, green and pink camouflaged boat had kept next to our leviathan all the way over, and every day we watched them across the waves drilling and playing games on deck.

Traveling in England now is a very different thing from what it was before the war. "Booking rates" have increased almost to the prohibition point. England discourages passenger traffic even more than we have. The trains are run so near to full capacity that most people have to get to the station fully an hour before the time of departure if they intend to get seats. Women ticket agents, women ticket punchers, women conductors and even women "baggage smashers" do most of the work formerly done by men. But I could never get used to seeing a woman porter at the railroad station carrying heavy bags while an officer or other gentleman walked behind empty-handed.

We arrived at the Berkeley Hotel in London in time to walk out on Piccadilly and see something of the city before dinner. The streets were not nearly so deserted as those of Liverpool. Throngs of pedestrians and many taxis and buses were moving up and down. Almost every man wore a uniform. There was the superdrest colonel with brass buttons, Sam Brown belt, highly polished shoes and leggings, carrying his inevitable cane in one hand and his gloves in the other. There were bare-kneed, kilted Scotch, lithe Australians, American-looking Canadians, sturdy South Africans, with here and there a stray tasseled-capped Belgian or a Frenchman in skyblue uniform and red-topped cap. The American officers were the most modestly drest soldiers to be seen in London and they were few and far between. This war has completely transposed the coloration of the sexes. It is the male sex now that is resplendent in blue, orange, green, red, gold and silver. It is the women who dress in drab plumage like the ladybirds.

We planned to dine in a different hotel each evening, not only to sample the English war time cooking, but to see how the English rationing system worked out. There seemed to be plenty to eat everywhere. Fish and eggs were abundant and the staple for a solid meal. But sugar and meat could not be obtained without tickets. Each dinner began with hors d'oeuvres, which consisted of sardines, cold tongue, pickles and three or four kinds of vegetable salads. I soon found this to be the best course to eat in England. It was invariably good, whereas the other courses were apt to be tasteless, as condiments and sauces are reduced to a minimum if not entirely abandoned.

In the best restaurants the English have all their menus printed in French. But now that they can no longer get French cooks and waiters they do not

fall back on English help, but employ exclusively the Swiss. I was told to be careful of my conversation in the presence of these Swiss waiters, as many of them were German spies.

The Englishman, especially of the aristocratic class, used to eat six meals a day—tea and biscuits in bed, breakfast at nine, luncheon at one, tea at five, and dinner at eight, and then something cold before going to bed. The middle class, of course, have never fared like this. But now everybody is cut down to the minimum. Indeed some have dropt below, as the following poem I ran across in one of the London papers attests:

A "fat lady" daily grew fonder  
Of the rations arranged by Lord Rhondda  
So "refined" she became,  
That you'll notice her name  
On a tomb in the cemetery yonder.

Every one was required to register for food as for about everything else. One friend informed me that "We shall soon have to register for leave to sneeze."

The theaters, which used to begin at nine, now opened at seven. This was, of course, a direct blow at the prevalent London habit of "dining out." All hotel restaurants had to have their lights extinguished at 9:30.

When we arrived in London the curfew law was just going into effect. This was revolutionary. It abolished evening dress, established six o'clock dinner, threatened five o'clock tea, started amusements at seven, closed hotels at ten, stopped hot suppers, took night buses off, rearranged traffic, gave thousands a longer sleep, saved coal and light and cut down banquets. But it did not seem to affect the theater attendance to any appreciable extent.

That night we went to a typical London "Review," which as far as I can see was just such a vaudeville show as can be found any night on Broadway. But there were three things at this and other "Reviews" that seemed to me especially significant. First, there were invariably songs about America. In fact a chorus draped in the Stars and Stripes was brought on in some part of the program in every music hall I visited in London and Paris. Second, there were a great many jokes about drinking whiskey. In America with the growth of sentiment for prohibition this kind of joke has gone completely out of fashion. But in England where the consumption of liquor is still abundant this is always sure to bring down the house. Third, between the acts the pictures of the Allied celebrities were usually thrown on the screen. There would be Lloyd George, King George and Haig from England, Clemenceau, Poincaré and Foch from France, Victor Emmanuel, Orlando and Diaz from Italy. Each one of these would get a perfunctory amount of handclapping, but when Admiral Sims of our Navy was thrown on the screen he got more applause than any of them, and then when General Pershing was shown he got more than Admiral Sims, and finally when Wood-

W. H. Page, recent Ambassador to England

row Wilson's face appeared the house went wild. Judge Wadhams and I nudged each other with delight. We had supposed that the United States would have been unpopular everywhere in Europe. We expected to find an attitude of mind that would say: "Yes, you Americans waited three years while we were holding the world safe from the Hun. But now you are in, don't think you are going to settle the whole affair. It is for you to show a little humility and modesty in view of the time it took you to make up your mind when the issue was as clear as a pikestaff to us from the beginning." But I did not find this critical attitude toward America in any country I visited, least of all in England. On the contrary, everywhere I went I discovered the United States was the most popular nation on earth and with all classes of people. It was almost pathetic to see the confidence Europe has in our power and purpose and in our ability to make good. When I realized the deficiencies of my own country and how far from perfect we were, it made me feel that we must make every conceivable endeavor not to dispel this good opinion.

Woodrow Wilson everywhere was recognized as the one great statesman that the war has produced. All classes acknowledge his ability and leadership. The common people worship him. Indeed I think it is no exaggeration to say that our President is more the Premier of England, France and Italy than Lloyd George, Clemenceau and Orlando. Even the so-called upper classes of England are today giving him their homage, and this is all the more remarkable when it is remembered that his statesmanship is bound to weaken privilege everywhere thruout the world.

On our way home from the music hall we had our first glimpse of London after dark. Not a light showed in any window. The streets were pitch black except for the faintest bluish lights in the street lamps, which were covered from above so as to be invisible from aeroplanes in the sky. Even the headlights in the buses and taxis were so shaded as to throw a faint light only a few feet ahead on the street level. At every underground station, or archway or other point of safety, an illuminated street sign pointed the way to safety in case of an air raid. When we reached the Berkeley Hotel we found the entrance in complete darkness and curtains drawn across the windows of all the rooms. There was no raid, however, that night. Indeed I never was in a raid in London, tho I enjoyed one or two false alarms. I had to wait till I got to Paris and the towns near the front for that exciting experience.

The next morning I called at the

American Embassy at Grosvenor Gardens. The American Army and Navy Headquarters were in an adjoining building. It was a very busy spot. Ambassador Page was not in, but we found that he had left an invitation for us to take luncheon with him at one o'clock at his home. Punctually at the hour we presented ourselves at 10 Grosvenor Square and were promptly ushered by a relay of footmen into the presence of the Ambassador to the Court of St. James.

The Pages have rented a fine old square house in one of the most dignified and charming parts of London. It

*A Zeppelin, one of a raiding party, flying over London*

was designed and decorated by the famous Adam, and is now furnished in the most discriminating taste. It is a home such as any American gentleman would be more than proud to call his own. The Embassy at the Court of St. James has been considered, I suppose, next to the Presidency and the Chief Justiceship of the United States Supreme Court, the most honorable office in the gift of the American people. Certainly the traditions handed down by those who have occupied it have made it a diplomatic post second to none in the world. Mr. Page may not possess the heritage of Robert Lincoln, the literary genius of James Russell Lowell, the wealth of Whitelaw Reid nor the golden personality of Joseph H. Choate, but no one of them knew the American people as well as he and therefore could have represented them better. Everywhere I went, among both Englishmen and

Americans, I heard unstinted encomiums of our Ambassador. He has not only made for himself a high reputation as a diplomat of ability, sound judgment and tact, but he has acquired considerable fame as an after-dinner speaker.

Mrs. Page likewise enjoys a distinguished position in London society. To show the esteem in which she is held it is only necessary to record that on the 8th of June she was invited by the First Lord of the British Admiralty, with the express approval of the King, to be official sponsor at the launching of the "Eagle," one of the largest ships in the English navy. The British naval ensign and the Stars and Stripes flew side by side from jackstuffs on the ship's bow during the ceremony and representatives of the United States naval forces in Europe were requested to be present by Admiral Sims, commander of the United States forces in European waters.

I found Mr. Page in a state of high perturbation over the fact that while the British line was being pushed back toward the sea and the fate of England was hanging in the balance, the American army was occupying a quiet sector of the French line, and as far as he knew had no intention of going up to help the British where the fight was the thickest.

"It is better," he said to me, "for America to lose a whole division than to remain inactive in this crisis in the world's history. We must have the American flag at the battlefield, no matter what the result." Mr. Page informed me that one of the most important members of the British Cabinet said that while the Government understood the matter fully the people would say that the Americans had never intended to fight anyhow if we did not come to the help of the Allies.

We talked the matter over in all its aspects and I finally suggested that it might be possible for a private citizen to appeal to public opinion in the United States when it would be impossible for a man in his official position to do such a thing. I asked him if he thought it would be wise for me to send a cable home urging the immediate sending of American troops to the front to support the British. Mr. Page thought a minute and then said, "That is a good idea." So after luncheon he took me into his library and asked me to sit down at his desk and write a cable dispatch. Accordingly I composed the following cable, which Mr. Page approved without a change. It would have been useless to send it to *The Independent*, which appeared only once a week, for the question was one of hours and not of days. So I took it myself to the *New York Times* representative, Mr. Marshall, with a letter of introduction [Continued on page 299]

# OUR HONOR ROLL OF WAR BRIDES

I read "Our Honor Roll" every morning in my church service. Every other pastor in America does the same if he is the patriot that he ought to be.

Since I have come back from France I find it harder to read it than before, because, behind every name on that roll, I have a hundred warm, vital, close, human pictures and my imagination plays havoc with my throat and my eyes and sometimes I have to turn the finishing of that reading over to my associate.

But I never read that wonderful list of names which we call "Our Honor Roll" that I do not feel as if I ought to be reading another honor roll also. I can look down into my congregation any morning and see, scattered here and there thru the audience, fine, brave young girls. One or two of them carry babies in their arms. They are "our war brides"; God bless them and keep them, and comfort them.

Every time I look into their faces I want to do something to honor them. I want to read an "Honor Roll." I want to speak of them as "our war brides" with the same pride and respect and reverence that we put into that wonderful phrase, "our boys."

One afternoon, eight months ago, the telephone bell in my church office rang. I had been answering it so many times that afternoon that I was weary with hearing it ring. But this call was different.

"Elizabeth is ill in bed and wants to see you at once. She is here at the college. This is Mrs. —."

I recognized the voice as that of the matron of the college. Elizabeth was a beautiful girl who was staying over during the vacation because she was doing some special work in music.

She was in love with a young Stanford student. He was one of the finest, cleanest chaps I ever knew. I had watched them thru their early days of friendship. I had been their father confessor during their turbulent days of courtship. I had taken them both into the church. I had joyed with them when they came to me with the news of their engagement.

Then Jim went into the aviation school.

And now Elizabeth needed me. I said that I would come at once.

It didn't take the car long to land me at the doors of the girls' dormitory of the college. It was a great, empty, lonely building with all of the other girls home on their vacation. The campus was beautiful with spring; the grass, newly washed by early rains, was as clean as the blue of the skies. Red flowers in early poppy beds broke the green. The matron met me at the door.

"Elizabeth is ill in bed. I'll take you to her room."

There she lay, her beautiful black hair disheveled, her big brown eyes wet with tears; her always crimson cheeks dyed the color of the flowers out on the

BY REV. WILLIAM L. STIDGER

*Dr. Stidger is a Methodist minister who took leave of absence from his church in San José, California, last year to go over to France as a Y. M. C. A. worker. He has written in previous issues of The Independent several stories of his experiences over there: "Under the Evening Hate," "Down Where the Shells Are Thickest" and "The Dominic Down the Line"*

Mr. Stidger on his way "over there"

campus, with an inner fire of heartache that was burning her up.

I knew that, whatever the trouble was, it was very serious with Elizabeth. Her cheek bones, high like an Indian girl's, were burning. The high, mobile forehead, too, was hot with fever.

"Oh, Doctor Stidger, Jim has passed—he has his commission and leaves in a week."

"But, Elizabeth, aren't you proud about that? You are going to be brave about that, aren't you? You've always been such a good sport about other things!"

"It isn't that I don't want him to go. I do! I'm so proud of him that I nearly burst with joy over his appointment! But they won't let us get married before he goes. That's what I'm sick over!"

Then she turned her face into the pillow and made it wetter even than it was when I came in. I waited.

I knew that they had been planning to get married and I didn't see why there should be any reason to delay that marriage just because Jim was going to France. In fact they had already asked me to be ready on a certain date for a quiet little college wedding in Elizabeth's Sorority rooms, where she and Jim had first met.

"Who won't let you get married, Elizabeth?"

"The matron and my stepmother. They say that if Jim and I are married and then he has to go to France that it will be all the harder for him to keep clean, because he has—"

"Bosh! Ridiculous, Elizabeth! I don't care what your stepmother and the matron say. They are both wrong; absolutely, cruelly wrong. The truth of

the matter is that you and Jim love each other. You are both over

twenty-five years of age. You are old enough to know your own minds. The very fact that Jim is married to you; that you belong to him and that he belongs to you; the very fact that he has something like that to anchor to; that in itself will keep him the fine, clean fellow that he has always been. The kind of argument that your stepmother and the matron have been using betokens a lack of faith in Jim and a lack of faith in human nature, and I, your preacher, say to you that the very fact that Jim has you for his very own will give him something to keep him true 'over there'!

"Oh, I am so happy to hear you say that. When those two women talked with me it just knocked my hopes from under me. We were so happy planning to be married, when this came like a blow to me. I was afraid to go on after what they said."

"Well, I don't like to go against the advice of your stepmother, Elizabeth, but I was never more certain that I am right in advice than I am when I say for you to go right on with your preparations to be married to Jim before he leaves."

"Thank you! You have not only made me happy, but you have given me strength!"

Jim and Elizabeth went right on after that with their preparations to be married, altho the stepmother and the maiden lady matron of the school were much horrified at my advice. They even interviewed me and then I said to them, "I believe with all my heart in war brides and war babies. If two young folks love each other as Elizabeth and Jim do, and have prospects so that the bride will not actually suffer for maintenance, they can come to me any time and I'll be glad to marry them, and what's more, I'll do it for nothing as a patriotic duty to my country and to humanity. I believe in war brides and I believe in war babies!"

Naturally there was a good deal of criticism of a young preacher over such a stand. If I had been older it might have been accepted more readily. But it was such a positive conviction with me that I was right that it was in my heart almost like a religious experience.

So a few weeks after that I married Elizabeth and Jim in a wonderfully beautiful spring college wedding. I never saw this beautiful girl more charming than she was that evening. Her Sorority sisters came to be bridesmaids. Jim's fraternity brothers came also. The wedding bell of flowers under which they were married was hung in a corner of the old Sorority rooms. The president of the college was there. The wedding was at evening time just as the sun was setting. The sky was a glorious crimson and the afterglow was all the light we had for the service, for it was Elizabeth's idea that she should be married in the dusk. We had memorized the service and Elizabeth and

Jim knelt as I pronounced them man and wife.

Nene who saw that wedding of Elizabeth, "our war bride," and Jim, one of "our boys," drest in his khaki uniform, with the soft voice of the chapel organ chimes playing all during the service, will ever have anything but the sweetest, most holy memories of that hour.

I wondered if I was right. On my advice and against that of others they were married. I have been to France since and I come back more and more convinced that I was right. I come back more and more convinced that the one thing above all other things that will keep a boy clean and fine is the fact that back here in America there is a woman who has given herself to him; a woman who belongs to him in a high and holy way; a woman whose every prayer and thought is for him; a woman whose dreams follow him day and night, down into the trenches, into the cities, out into "No Man's Land" like a hovering angel of love.

"If that won't keep a man clean, nothing under God's sun will!" a young lieutenant said to me in the officers' hotel in Paris one evening.

"And better even than leaving a war bride behind, and doubly binding a man to high and holy thinking and living, a tenfold anchor to decency, is to have something else over home" he added.

"What is that?" I asked the young lieutenant.

"A war baby," he replied with a smile, and then reached into his pocket for the inevitable picture of his Madonna and the Child.

Another old friend I met in Paris. He is driving an ambulance and has been all thru the hottest of the fighting around Chateau-Thierry. I knew him back in the college town where I am pastor of a large group of college students. As in the case of Elizabeth and Jim, I had watched the love affair of this young couple also.

I had shared their confidences. I had been told first when they became engaged. I had seen Mary make a man of this careless spendthrift of a boy. I had seen him leap into manhood overnight because of his love for her. I had seen them also walk down the aisle of my church and kneel together, uniting with the Church. That was a virtual marriage of their souls, and the three of us knew that it was such. But they had listened to the advice of some well intentioned friends and had decided not to be married until after the war.

When I talked with Frank in Paris he said: "The one great regret that Mary and I have is that we didn't get married before I came to France. She has written me that a hundred times!"

"Why, Frank?" I asked him.

"Because we could then feel that we belonged to each other. That would be a comfort to me and it would be a comfort to her."

"But if anything happens to you?" I said.

"That's all the more reason why we should have been married, Mary says, and I feel the same way."

"Then if you had it to do over again?"

"We would have been married before I left home," he said, with the positiveness of a conviction that had come by long thought while driving thru the night hours under shell fire and death.

Everywhere in France I have found this as men have opened their hearts in some quiet moment to talk about this most sacred thing.

Marriage is a momentous step in two

# They Save Teeth Now in a New Way

*All Statements Approved by High Dental Authorities*

## They End the Film

Countless people are now cleaning their teeth in a new way. And modern dentists all over America are urging other people to join them.

The old ways proved inefficient. As millions know, they failed to prevent tooth troubles. Despite the tooth brush, tartar, decay and pyorrhea constantly became more common.

Some years ago the reason was discovered. It lies in a film—a slimy film—which constantly forms on teeth.

That film gets into crevices, hardens and stays. It resists the tooth brush, and most tooth troubles are now known to be due to it.

The film is what discolors, not the

teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. And many troubles besides tooth troubles are traced to this germ-breeding film.

After years of research, a way has been found to combat it. Able authorities have proved this fact by adequate clinical tests.

For general use the method is embodied in a dentifrice called Pepsodent. And we supply a special tube to all who ask, so the millions may quickly know it.

## Let It Convince You

The Pepsodent results are quickly apparent. After a few days' use you will never forget them.

The basis is pepsin, the digestant of albumin; for the film is albuminous matter. The object of Pepsodent is to dissolve the film, then to constantly prevent its accumulation.

But pepsin must be activated. The ordinary agent is an acid, harmful to the teeth. For long that fact made pepsin seem impossible.

Now modern science has discovered a harmless, activating method. Five governments already have granted patents. It is that method which makes possible this efficient application.

Four years have been spent by dentists in proving the value of this product. Now we urge all people to prove it by a home test.

Send the coupon with 10 cents for a special tube. Use it like any tooth paste. Note how clean the teeth feel after using. Mark the absence of the film. See how teeth whiten as the fixed film disappears.

All this means that the film which wrecks teeth can now be effectively combated. And you will never cease to do that when you see what it means to you.

Cut out the coupon now.

## Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.  
**C. E. BROOKS, 490F State St., Marshall, Mich.**

lives. I realize that fully, for I have formed many hundreds of homes. I have also seen hundreds of tragedies in married life. I know all sides of it as they drift thru my church office. But I still have mountains of faith in love and marriage and home; and most of all in war marriages. I do not advise war marriages carelessly. I do it because it is a deep and genuine conviction with me.

I believe that those who fight this perfectly normal desire on the part of young folks in these war days, this high and holy passion, this patriotic duty to themselves and their country, do not know it, but they are both unfair and unpatriotic.

The first Sunday I was at home in my pulpit, after I had spoken and the great crowd was thinning out, a beautiful woman with a sweet child in her arms patiently waited for me. I recognized her at once as one of the war brides whom I had married more than a year previous to that. There was a wonderfully happy look in her face, not at all the pessimistic, discouraged, downhearted look that some of those would argue, who do not believe in war marriages, war brides and war babes. There was a wonderful radiance about her face. Raphael or Da Vinci might have painted an immortal Madonna of War with her for model.

She wanted to show me the baby. I could see that.

When the crowd had gone I hurried to her.

She put the war baby into my arms and I never saw a sweeter child. It was quiet and friendly. She said that she had had it in church all that long morning service and that it had not whimpered. It was a well formed baby. It was not nervous. Many a babe born of less strenuous and less emotional moments I have seen shot to pieces with nerves that had been handed down to it from its peacetime mother.

Not so this baby. There had been a certain great, brave confidence, poise, hope and everlasting love shot into that child's very birthright which had given it that lack of restlessness.

It looked up into my eyes and reached out its little arms. It was a friendly child and there was no look of fear in its eyes.

I said, "Has its Daddy ever seen it?"

"No, but we've sent him a hundred pictures of her," the mother said and emphasized the "Her."

I knew that here was a gentle reminder that she was no longer an "It" but a "Her," and I smiled at the gentle rebuke.

"I know just how eager that Daddy is to see her! I've been there myself."

Then I added, "Are you glad that you took my advice about getting married?"

"Oh, yes sir; so glad; so glad!" she said with a wonderful light in her eyes.

"Glad, even with your husband away and the additional responsibility of raising the child yours?"

"Yes, glad even as hard as it is. People are so good to me and give me a chance to work. Then I have his allotment. He only keeps out a dollar a month for himself. I get along well. It is so easy to give up other, lesser things for them." And the light in her eyes was enough to blind one as she looked down at her War Babe.

"Glad, even if—"

"Yes!" And her voice had a supremely triumphant note in it as she spoke. "Yes! Glad even if he gives his life 'Over There.' I will at least have Baby. Baby is a part of him. Baby looks like him and acts like him. When I hold her in my arms I feel that I am holding him. She even laughs like him and has mischief in her eyes just like he has, and a little cowlick in her hair above the forehead like his. At first I thought that was awful for a girl to have, but more

and more I am glad that she has her cowlick."

"So you are glad, no matter what comes, that you are a War Bride and that you have a War Baby?" I said.

"Yes, Glad! Glad! Glad!" And those words were like a song to me.

I thought that would be the end of experiences with War Brides for a while, but the very next day a letter, which had been sent to France from one of my War Brides, came back to me. It was so characteristically brave and fine that I include it in this human document:

DEAR BROTHER PREACHER:

Last night I came home pretty late from a lecture by a young Australian who was blinded at Gallipoli, and felt tense with pity and admiration, and the effort to understand things; when there were your letters like a voice from the front itself. And your "pitcher" too, looking like a Cossack!

Well, anyway, I was so glad to hear your voice and to marvel at your remembering all the tiny things about us, instead of telling us what you're up to.

I'll be glad to have you home, indeed and indeed; and you may have to buck me up again because after June my lad will be on Uncle Sam's business. It is hard, but I know that it is RIGHT! I'm so thankful for these happy months to get my bearings, with no jots of emotion or hectic impulses, but just the conviction that it's right for him to go and for me to supply tons of ammunition in the way of love and approval, and a "High Heart."

I am proud to be a War Bride. I have never done anything that I am happier over. And you will be glad to know that before long we are to have a War Baby. I hope "Billy" (for he is to be named for you) comes before his Daddy has to go. But if not, it's all right. That's my part and I'm proud to have a part.

With love,

JANE.

## WHEN THE BILLS ARE PRESENTED

(Continued from page 285)

Would not American art be better for such an entente?

Examples throng on—oriental carving in Japan, archeological studies in Greece, printing in London, lace making in Brittany.

Reversing the slate, our allies could endow like scholarships in this country. French physicians could study at Johns Hopkins, Italian lads could learn quantity production under Henry Ford, British girls come to our business schools. In fact, it requires no great stretch of the imagination to see J. P. Morgan & Co. having its quota of brilliant Allied lads studying American finance.

Both here and abroad opportunities of this kind have been limited because of the types of scholarship, the lack of money or of family influence. Having helped make the world safe for democracy, we can turn our attention to helping inject true democracy into international education.

A series of competitive scholarships covering every branch of the arts, science and higher trades would go a long way toward that mutual understanding which makes for peace. They would prove an insurance against future misinterpretation.

Any League to Enforce Peace must be based on a mutual understanding of any sympathy with the customs and aspirations of foreign peoples. But the path of peace along which we must travel in the future cannot be laid solely on economic inter-relationships. It must be built on an understanding of the common arts and sciences which make up the fabric of everyday living. While we form this League to Enforce Peace, let us plan to train the future generations of those peoples in an understanding of the things which make for peace and the fuller enjoyment of life in each country.

*J. H. Tilden*

Dr. J. H. Tilden of Denver, Colorado, is one of the most widely known medical reformers in the United States. He is the editor of "Philosophy of Health." His important works are "Diseases of Women and Easy Childbirth," "Food," 2 vol.; "Appendicitis," "Cholera Infantum," "Typhoid Fever," "Impaired Health, Its Cause and Cure," 2 vol., etc.

### Do Germs Cause Disease?

Yes, the Spanish Influenza germ is one of many causes of the disease. Wrong eating and wrong care of the body are necessary before the "Flu" germ or any germ can cause disease. Resistance is broken in all those who develop influenza or any other epidemic disease. Eat right and avoid all diseases—read

### The Pocket DIETITIAN

by Dr. J. H. Tilden, who depends entirely upon diet and correcting of habits to relieve and cure his patients of their varying ailments.

"THE POCKET DIETITIAN" protests at its very beginning that in no sense are its teachings on diet or eating correctly to be construed medicinally, remedially or in the sense of a cure.

Every poison is a toxin or an intoxicant. Toxins are developed by fermentation and decompositions of all kinds of food-stuffs taken in excess of nutritive requirements. Alcohol, tobacco, tea and coffee, also drugs for relieving pain, are toxic; which means that they are stimulating—intoxicating—and, when habitually used, bring on enervation and pave the way for affections of all kinds, especially those to which there is a predisposition through inheritance.

"THE POCKET DIETITIAN" will teach you how to live—give you an idea of the real cause of disease and how to side-step it. It is crowded with hints as to proper food combinations, menus for people in all walks of life.

"THE POCKET DIETITIAN" is destined to be one of the most popular books on diet published. Price only \$1.00 (100-page volume, pocket size, flexible leather cover); it is worth a business to some, and life to others. Send check, money order or currency for it without delay. Address, Department "PD-5."

DENVER, COLORADO

## The New Books

### The War from Many Angles

TALES FROM A DUGOUT, by Arthur Guy Empey. (Century Co., \$1.50.) Stories of war that the Tommies told each other under fire. By the author of "Over the Top."

A RED TRIANGLE GIRL IN FRANCE. (George H. Doran Co. \$1.) A canteen worker's letters, revealing the soldier's attitude of mingled good fellowship and reverence toward the girl who stands for home.

RELIGION AND WAR, by W. H. P. Faunce. (Abingdon Press, \$1.) The author contends that, based on the teaching of Christ, out of the war must come a League of Nations. Contains much thoughtful reading matter.

THE CHILDREN OF FRANCE AND THE RED CROSS, by June Richardson Lucas. (Frederick A. Stokes Co. \$1.50.) A journal of American Red Cross work among destitute French children sent back from German territory. It is passionately sympathetic without being hysterical.

PRESIDENT WILSON'S STATE PAPERS AND ADDRESSES. (George H. Doran Company, \$2.) A complete collection of Mr. Wilson's official and semi-official messages, notes and proclamations since assuming the Presidency, with introduction by Albert Shaw.

A DREAMER UNDER ARMS, by F. G. Hurrell. (E. P. Dutton & Co., \$1.50.) An idealistic, but self-centered writer, of Kitchener's army, learns that life is action, not dreaming, and that the forces that make for living must be struggled with actively, not passively.

THE COMING DAWN, by Theodora Thompson. (John Lane Co., \$1.50.) "A war anthology in prose and verse"—a compilation of opinions on the meaning, the outcome and the spiritual interpretation of the war, looking forward to the future of a re-created world.

THE GOVERNMENT OF THE BRITISH EMPIRE, by Edward Jenks. (Little, Brown & Co.) An able and well-classified book of reference concerning the British Government systems and customs. It is interesting and up to date, including modifications temporarily introduced by the war.

IT HAPPENED OVER THERE, by Burriss A. Jenkins. (Fleming H. Revell Co., \$1.25.) A novel of current events and emotions with a mixture of warlike ardor and religious sentiment, and seasoned with love interest between an English grande dame and an American aviator. Emphatically a war product.

DRAFT CONVENTION FOR LEAGUE OF NATIONS. (Macmillan Co., 25 cents.) A plan by a group of American jurists and publicists for the constitution of a possible League of Nations. Covers all the branches of government, with suggestions for utilizing the present Hague Court and its machinery wherever possible.

GENERAL FOCH AT THE MARNE, translated by Lucy Menzies from "Les Marais de Saint Gond" by Charles Le Goffic. (E. P. Dutton & Co., \$1.75.) A vivid account of the six days' fighting in the marshes of St. Gond, which preceded the final victory of the French at the Marne. A book of special interest to those to whom the details of battle are interesting.

TWO THOUSAND QUESTIONS AND ANSWERS ABOUT THE WAR. (George H. Doran Company, \$2.) A catechism of the methods of fighting, traveling and living of all branches of the service of the warring countries, and a survey of their politics, geography and personalities. Largely taken from Stead's Australian Review of Reviews. Illustrated with new war maps.

THE SOVIETS AT WORK, by Nikolai Lenin. (New York: Rand School of Social Science, 10 cents.) Those who want to know what the Bolsheviks have to say for themselves as well as what is said about them by their enemies, should get this pamphlet. Now that the soviet system has been extended to Germany it is important to understand its constructive program.

THE DESERT CAMPAIGNS, by W. T. Massey, official correspondent for London newspapers with the Egyptian forces. (G. P. Putnam's Sons, \$1.50.) Reveals some of the heroic work by Australian troops on the sand dunes of Africa, of which little has been told in the stories of the Great War. Illustrations from drawings by James McBey show the unfamiliar setting which added to the hardships.

## Superior

## WHEN ENGLAND WAS AT BAY

(Continued from page 293)

from Mr. Page, and Mr. Marshall transmitted it that night by cable to America. It read as follows:

London, Saturday, March 30.

To the Editor of the Times:

The situation is so grave at the English front that it is absolutely imperative for America to send as many troops as she possibly can, to fight shoulder to shoulder with the British Army where the battle is thickest; for if Germany can once get a channel port, no man on earth can tell what will ensue.

Thus not only shall we be bearing our share of the battle's brunt, but we shall have done more than anything, since we entered the war, to hearten the spirit of Britain and all our allies.

Unless this is done we shall run the risk of losing the golden opinion Europe has already formed of us, and the belief will inevitably come to prevail that America never seriously meant to fight anyway.

Public opinion in the United States should support General Pershing in any action he may take to transfer our troops, now occupying a quiet French sector, to the forefront of the battle line.

HAMILTON HOLT.

What effect, if any, the publication of this dispatch had in America I never learned. But next day General Pershing made his memorable offer to put the entire American army at the disposal of General Foch to use in any way Foch thought wisest to help stem the great German drive. This set Mr. Page's heart at rest and he said, "We have done our duty. It is now for the French and English to employ our troops as they will."

This offer of Pershing's I have the best of reasons to believe had more to do with the making of Marshal Foch the allied Generalissimo than anything else. From the very beginning America had urged the creation of a single command for the Allies on the western front, but as long as the English and French successfully were holding the line we could not get them to act. Lloyd George approved of a single command, but even he felt that he could do nothing until some military disaster occurred to the allied cause. But after Germany had broken thru the English and French lines and America had suggested that England and France should bury their jealousies and decide between themselves which should have the supreme Generalissimo, the thing was done.

I was somewhat amused at the tone of the English papers during this controversy. Each paper rebuked its colleagues for objecting to the plan, but each said that it itself had always favored it. But the English soon found that the making of Foch Generalissimo was the turning point of the war and in a little while were as enthusiastic for it as the French and Americans had been.

And may I say right here to the eternal honor of England that during the entire time I was in Europe I never heard a single Englishman criticize the French army or the American army or any other army except his own. I am sorry that I cannot say the same of the American officers or the French officers whom I met. I may further say that during this most critical period in the entire war, when any day the news might have come that the English retreat had turned into a rout, I never heard a single whisper from a single Englishman. The papers were not telling the public the worst and the nation knew that things were being held back. But there they stood with their backs to the wall ready to do or to die. It was glorious to see such universal fortitude in the face of such dire calamity. What a contrast to the whining and the feeble scurrying to cover of the Germans when the Allies began to get them on the run. Old England does not advertise her virtues, but when the crisis comes she is always there.

# Notable Doran Books 1918

## "AND THEY THOUGHT WE WOULDN'T FIGHT"

Floyd Gibbons

The first great story of the American Expeditionary Forces, a panoramic picture, by the famous correspondent wounded in action at Chateau-Thierry.

Illustrated. Net, \$2.00

### TWENTY-THREE AND A HALF HOURS' LEAVE

Mary Roberts Rinehart

A delightful book for mothers to send to soldier sons.

Net, \$0.60

### WILD APPLES

By the Author of "The Straight Road"

"A portrayal of heroic young manhood such as we have not seen surpassed in all our range of fiction."—*N. Y. Tribune*.

12mo. Net, \$1.50

GEORGE H. DORAN COMPANY :: Publishers :: New York  
PUBLISHERS IN AMERICA FOR HODDER & STOUGHTON

# Every Week THE LIVING AGE

Now Under Atlantic Management

**T**HE interests of the whole world are about to focus upon a single point. The peace table will be the centre of intenser interests and vaster problems than have ever before devolved upon a single group of men. The politics and diplomacy of the world will centre about that board, and on it will be played stakes of human happiness past all calculation.

To understand the cards as they fall, to appreciate the players, and to realize the significance of every move, you must know more than our newspapers and magazines can tell you. You must know not only the American hand, but the hands of every player. You must realize what each country has at stake, what it needs for its own happiness, and what it aspires to for its own glory.

Week by week the *Living Age* will tell of these things. It will give you, for all the nations, just those essential facts and opinions which you gain from American papers for the United States alone. Through it you can know more than the cards your own country has to play; through it you can look at every hand in turn; through it you can understand the game.

The *Living Age* seeks to become, in a very genuine sense, a compendium of European thought, representing not what Americans think of Europe, but what Europe thinks of itself. Our contributions will comprise in translation the most important articles printed in European journals and magazines and the most important speeches of European statesmen. It will embrace the world not only of politics and social advance, but of all the rich and varied interests of life and civilization.

## A COURSE IN SOCIAL PROBLEMS

By A. S. BEATMAN, A. M.

Head of History Department, Julia Richman High School, New York City.

TEACHERS SEND FOR THIS BROCHURE. IT IS FREE

THE INDEPENDENT : : 119 WEST 40th STREET, NEW YORK

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## WINNING 4796 NEW CHURCH MEMBERS

(Continued from page 288)

picked group of Toledo pastors on New Year's Eve from 8 to 11 p. m. at all of the theaters in the city. This included not only the motion picture houses, but the vaudeville, drama and even the burlesque houses. At the moving picture houses the address was sometimes made two or three times during the evening, between shows.

### GO-TO-CHURCH SUNDAY

1—*Church Calendars*. All the churches in the city were asked to run special articles in their church papers about Go-to-Church Sunday and special notices in their calendars. Where a church used neither, the announcement was stressed from the pulpit.

2—*Street Cars*. Large cards size 22 by 24 inches were printed in two colors and posted on the fronts or fenders of two-thirds of all the street cars in the city, running a full week prior to "Go-to-Church Sunday." This was chosen in preference to posters inside the cars because the latter would only be seen by passengers whereas the cards on the outside would be seen by practically everybody, whether riding on the cars or not.

3—*Window Cards*. Neat window cards or placards used, size 11 by 14 inches, were printed and allotted to the churches who distributed them among their members promising to put them in the windows of their homes. A number were also put in show windows in downtown stores.

4—*Hand Cards*. These were not cards, strictly speaking, being printed on heavy tinted paper. They urged the attendance at church on this special Sunday and were allotted to the churches to be distributed by the Sunday school pupils in their neighborhoods, especially to non-churchgoers.

5—*Newspaper Ads*. In all the newspapers of the city, little display ads were used every day for the week preceding this Sunday. These ads were small, only one column inch in size, but were given a bold black and white treatment to make them stand out. Three ads were used in each issue, scattered thruout the paper and given what is called first position (top of column and next to reading matter). The newspapers gave their minimum rates.

### NOON DAY THEATER MEETINGS

1—*Use of Theater*. The management of Keith's Theater, Toledo's leading vaudeville house, donated the use of the theater every day at noon except on Monday (that day is used for rehearsals).

2—*Bill Boards*. Our local bill poster plant donated a large painted sign, about 5 feet wide by 10 feet high, handsomely painted in three colors, advertising the noon meetings. This was erected near the entrance of Keith's Theater.

3—*Street Cars*. The same sort of outside cards or signs were used on the fronts of the cars as were used in the "Go-to-Church Sunday" campaign.

4—*Newspaper Advertising*. All of the department stores and other prominent retail advertisers were requested to run a notice of these Keith meetings every day in their newspaper advertisements. These notices occupied a space of 2 inches, single column, set in rather bold type inside of a box or panel to make it stand out from the balance of the ad.

5—*Newspaper Publicity*. Every day the Toledo Blade ran a "streamer" clear across the top of its noon edition, advertising the meetings in bold type. In addition, the Blade and the other papers ran first page stories in their afternoon editions, covering the sermon that noon.

6—*Elevator Cards*. Some large cards, size 22 by 24 inches, were printed in two colors and hung in the elevators of most of the downtown office buildings.

7—*Program Folders*. Little folders were printed in two colors giving the program of speakers and topics for the entire two weeks of meetings. These were distributed in the downtown stores and office buildings by volunteers and also by the various church societies, brotherhoods and women's clubs.

8—*Daily Invitation Cards.* These were printed each day, showing the speaker and topic for the next day and were distributed by picked volunteers among the office buildings and department stores downtown, laid on the tables in the restaurants, cafeterias, etc. These cards were printed on different colored stock each day to make them look different.

9—*Moving Picture Slides.* Slides, neatly lettered in colors, were run in practically all of the downtown moving picture theaters, using a change of slides each week. The theaters gave this service gratis, but the Inter-Church Federation furnished the slides.

10—*Special Days.* One of the most productive forms of promotion to increase the attendance was to allot special days to the various societies. For instance, one day each week was allotted to the Christian Endeavor Societies of the city, one to the Epworth Leagues, one to the Baptist Young Peoples Unions, one to the Men's Clubs and Brotherhoods and one to the Women's Societies. Each organization was asked to deliver an audience on this one day.

The advertising was a tremendous success. The results from it were instant and positive. For the Watch Night Prayer Service, Trinity Church (one of our largest) was packed to the doors, people standing ten deep in the rear and fully a thousand were turned away, unable to get in.

On Go-to-Church Sunday, March 3, it seemed as tho all Toledo turned out. All of the churches reporting had capacity congregations—many were packed. The pastors voted it the greatest Go-to-Church Sunday Toledo has ever had. And the ultimate results were far-reaching.

For the Noon-day Theater Meetings the crowds at Keith's grew with each successive meeting culminating in the biggest attendance of all on the last day. The collections grew with the attendance and practically paid all the expenses of the meetings!

The entire campaign was a success. We had set our quota (new members added to the churches by Easter) at 4000. We exceeded that by 796—the mark we reached was 4796!

So score one more achievement for advertising. It simply proves anew its many-sidedness and versatility. It shows that advertising can be made a power in the field of the church as well as in the field of the market. It can be inspirational as well as commercial. It can serve souls as well as sell soap.

Perhaps as Mr. Lee says, advertising is a sort of Fifth Estate—the most terrific bolt in the Jovian arsenal—the young giant of leashed power. Perhaps persistent, consistent, insistent publicity, if given time enough, can do anything in the world. Tank like, perhaps it can crash its Juggernaut way over and thru the barb-wire entanglements of Prejudice and Indifference that cumber human thought today.

In October the Bureau of War-Risk Insurance mailed 957,240 checks, of which 934,157 were for allotments, 6074 for compensation and 17,000 for Government insurance.

The ban has been removed from literary effort by persons in the military service. Hitherto, they were forbidden to contribute to publications, or to accept pay for their writings.

The American Red Cross has opened four hospitals in Italy—at Milan, at Rome, at Genoa, and at Florence. They are entirely at the service of any Americans in Italy who are engaged in war service.

Two women, one representative of labor and one representative of management, are to be added to each State Advisory Board of the United States Employment Service. They will have full voting power.

*What messages are the prophets proclaiming to steady the people's hearts, to prepare them for this hour and to comfort them in their affliction?*

John Timothy Stone, D.D., L.L.D.

Cleland B. McAfee, D.D., L.L.D.

TEN men, all members of one religious body, all living in the same city, were invited to contribute a recently preached sermon to be incorporated in a book of war sermons, in order that uninformed critics might discover how alert the pulpits are to the exigencies of the hour; that bewildered people might be directed toward a straight path, and that preachers who have not as yet been able to formulate their convictions might be helped to a clear and compelling message.—*From the Foreword.*

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan Book No. 710 \$25 Certificates of Deposit also for saving investors.

**PERKINS & CO. Lawrence, Kans.**

## IS UNCLE SAM TO KEEP THE RAILROADS

(Continued from page 287)

September export tonnage was more than double that of last December, January or February. In a word, a revolutionary transformation in railroad conditions and methods sustained the bridge to Pershing and had vital effect. In seven months the port freight capacity has been more than doubled, and it is still on the rise, yet the very men in charge—A. H. Smith, Regional Director at New York, who used to be head of the New York Central, is a notable instance—are men who failed a year ago. And, moreover, at date, the capacity of the carriers is well in excess of the traffic offered, yet supplies of many classifications are moving from West to seaboard in quantity and at speed never known in the history of our railroading before. Not all the improvement is due to bettered railroading—some is due to coördination between governmental and commercial and Allied factors—but all is due, directly or indirectly, to the fact that governmental or centralized control made such coördination and improvement possible. The proof is that it could not, by any stretch of desperation, be achieved before.

To catch the bricks and cabbages hurled, Mr. McAdoo established a central big basket with some active advocates of the era of the public-be-pleased sitting round the edges of it. The Bureau for Suggestions and Complaints recognizes that the alterations coming, expediently, with centralized control of the roads, are new and sometimes strike in unexpectedly upon one's eleventh-hour travel plans. Eleventh hour crowds lined up, buying tickets, for instance, the bureau makes clear are in part due to the increase in travel—there were about 15,000,000 more persons traveling and as many more journeys accordingly, in June, 1918, than in June, 1917. There was concurrent loss in ticket sellers, by draft and other causes, which has resulted in women being called into service. The surcharge of one-half a cent a mile for Pullman transportation, the bureau points out, is justifiable, since a sleeping car will accommodate only twenty-seven persons, a coach sixty persons, and the average deadweight to be hauled amounts to 3250 pounds per seat in a sleeping car, that in a coach only 1400 pounds. Ill-kept stations, cars, etc., when reported, are being followed up. Train schedules are being adjusted—are not yet, by any means, completely adjusted—so that connections are improved.

There are interesting reflections of the change in the legal departments, which in cost of maintenance have been reduced about a million and a half dollars. Suits are fewer, evasions fewer. People like America better than they liked American corporations.

Consolidation has brought consolidated off-line ticket offices in some cities where one can buy any ticket on any road, and ticket offices at stations have been consolidated.

The express companies, like the Pullman Company, are now parts of a co-ordinated system.

The inland waterways systems, including fifty-seven canals, 3057 miles in length, some of which were owned or controlled by the railroads, and many thousands of miles of navigable rivers, lakes, bays, sounds, inlets and watercraft, are also part of a co-ordinated whole, soon to be under district directors and a Director of Inland Waterways.

The Government insures its own risks, with a vigilant system of inspection and protection inaugurated—a good thing economically, no doubt, since reports from all but five of the more important roads

demonstrate that in the three years ending June 30, 1917, the premiums paid insurance companies aggregated \$16,021,369, tho these roads insured by no means all property insurable, while the total losses incurred only \$12,460,639, including the Black Tom disaster. It is believed that with proper care, a substantial saving will be made by a policy of non-insurance.

A uniform compensation, insurance and pension plan for employees is under consideration.

Safety departments are being made more general.

And among other economies effected and other regulations made, the purchase of supplies is centralized, a substantial saving is thus made, and the sale of all intoxicants has been abolished, on the land and waterway transportation properties.

Not all travelers are altogether pleased, not all are altogether placated or reassured or ready to give over their grievances, however, even when they are told that 1,200,000 troops have been transported monthly, requiring equipment, preëmpting attention that might otherwise be given travelers.

And it would be a great mistake to suppose that all shippers are delighted with governmental management. No individual kick is powerful enough, of course, to knock Government ownership under the river of doubt, just as no individual championship is sufficient to sustain it. Nevertheless the fact remains that the Interstate Commerce Commission hears a great many kicks. Some shippers complain that when they ask their freight to be sent by one road, it comes in by another; and the Railroad Administration answers that usually a straight line is the shortest distance between two points and preferred shipments have the right of way over the straight line. Representatives of the Fuel Administration chime in that anyway there won't be a coal shortage of much moment this winter, thanks, in part, to many factors, one of which is the relief of port congestion of coal cars, achieved by pooling and improved classification to facilitate pooling, a plan inaugurated in the days of the War Board, made almost completely effective now. But the most emphatic complaints reaching the Interstate Commerce Commission now come from the lines not taken over by the Government. Lines existing within states, used for thru governmental traffic, are subject to Railroad Administration rulings; there are many lines, nearly 800, quite outside, responsible to state commissions that in many cases have refused rate increases, either freight or passenger, are subject to many reactions from governmental management of the great majority of roads, and, as a result, in some cases, are taking refuge in bankruptcy. The Interstate Commerce Commission serves, aside from its adjudicative function, as a source of much valuable information and advice to the Railroad Administration. To it, also, is committed, by the legislation establishing centralized control, the computation of income, debits and credits arising from governmental dealings with the roads; the computation of the average annual railway operating income; the appointment of boards to hear claims for compensation arising in certain emergencies, antecedent resort to the Court of Claims; the review of rates, fares, charges, classifications, regulations and practises initiated by the President or his representatives, provided, however, that none of these "shall be suspended by the commission pending final determination"; the hearing of complaints as to these changes inaugurated in

which case, to quote the Act of Congress again, the commission "shall give due consideration to the fact that the transportation systems are being operated under a unified and coördinated national control and not in competition."

Holders of stocks and bonds uttered a long sigh or relief when the Government took responsibility for the roads. They were willing to accept a mean average of profit approximated by the average of the last three years of private control; they are willing to go on receiving that until the twenty-one months after peace is declared—the time the Government is to retain the roads—is over. Equipment is being improved, 100,000 freight cars, 1430 locomotives, of standardized design, are being delivered, improvements costing to date more than \$1,500,000,000 have been authorized, for additions, betterments, equipment, construction of extensions, branches, new lines. Advances to roads aggregating \$203,714,050 for the payment of authorized dividends and the redemption of maturing securities, were made previous to August 1. The roads were enjoying relative prosperity, in other words.

Taken by and large, talking much with many railroad men who have long been constitutionally opposed to Government ownership, as well as with those constitutionally addicted to it sentimentally, it seems that things are conspiring to bring about acceptance of Government ownership or centralized control, or at least regional control, as a permanent thing. This result may be merely transient.

This does not at all mean that the railroad question is settled. No matter how marvelous a record the Railroad Administration, with its wonderful choice of regional directors and executives, may make, still there are mighty, perhaps major, forces in the bulrushes along the river of doubt, biding their time. No matter how glorious a stream of traffic the railroads now, with the waterways and other means of transportation at the command of the Railroad Administration are getting off to Europe, there are breakers ahead.

The breakers will begin to smash home the moment that peace is declared and the bulrushes will be there with the breakers. It is, in a word, the transitional period that will immediately follow peace that will tell the tale. The causes that will make reconstruction difficult will affect the railroads just as they affect the rest of American industry. The roads are a kind of major test of Government control. If they remain in Government control they will constitute a major premise for Government control of much else in American industry, and Washington will be, as a result, the industrial as well as the political capital. But if the railroads fail, much else will fail of Government control. The issue is up, in many ways, thus, to the roads, and it is also up to the next Congress, which will have much to do with the ways and means of reconstruction. But the issue will also be up in 1920, the next Presidential election. If, then, Mr. McAdoo has laid the fundamentals of his railroad administration so soundly that there can be no question of his complete success, if he can point out that the exigencies of revenue require governmental control (England's total sources of pre-war revenue will not, after the war, pay the interest on her war debt); if he can show that our national ascendancy and power rests upon the same unified control of our national facilities that in war England has attained and France has, that the day of international competition is here and the day of intra-national, or internal, competition must, perforce, be gone, public opinion will do the rest.

Washington, D. C.

## How to Turn \$1000 Into \$1600

**A**N investment of \$1000 in a ten-year first mortgage 6% bond, safeguarded under the *Straus Plan*, will yield a total return of \$1600 in principal and interest.

If you want a security maturing sooner, you have a choice from ten down to two years, as the bonds mature serially.

### War-Tested Safety

These well-secured bonds have proven their safety and stability in value through four years of war-time conditions. As they are issued in denominations of \$100, \$500, and \$1000, they are suitable for investments of any amount.

We offer a well diversified list of sound bonds which have been passed by the Capital Issues Committee as not incompatible with the national interests. Write today for our booklet, "Safety and 6%," and for

# SAVE COAL

without foregoing heat

Baltimore Residence of  
J. W. Lockers  
Chamberlin equipped.

**"WEATHERSTRIP YOUR WINDOWS"** urges the Fuel Administration. Seal those 1-8 in. to 1-16 in. heat escapes around the sashes. Chamberlin Strips, the standard for 25 years, save 1 or 2 tons of coal out of every 5, exclude cold drafts, coal soot and wet, insure warmth near windows, prevent "sticking" or rattling.

Nearly twice as many Chamberlin equipped buildings as all others combined prove it's BEST, simplest, most weather-tight and trouble-free. Outlasts the building. Repays its cost in 4 years or less. Guaranteed 10 years by the largest, oldest, most experienced weatherstrip makers; with a half million dollar paid-up capital and a quarter-century reputation for success.

## The Chamberlin'd Window

Keeps in heat, bars out cold, drafts, dust, soot, rain, snow, damp; deadens noise, prevents rattling and "sticking" for the life of the building. There's nothing to wear out.

## Famous Chamberlin Users include

THE INDEPENDENT, 119 W. 40th St., New York

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

## ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

### I. When England Was at Bay. By Hamilton Holt.

1. Contrast traveling in England in the time of Washington Irving's visit, and in the time of Mr. Holt's visit.
2. Contrast the London street scenes described by Irving in "The Sketch Book" with the London street scenes pictured here.
3. Contrast the England of Sir Roger de Coverley with the England of today.
4. Contrast the attitude of England toward America in the time of Edmund Burke with the attitude toward America today.
5. Give an earnest, practical talk on the thesis: "We must make every conceivable endeavor to uphold the good name of the United States."
6. Give a spirited speech showing how great was the danger from the German drive. Conclude your speech by adding remarks concerning German propaganda today.
7. Draw from the article material in proof of the proposition: "In unity there is strength."

### II. Our Honor Roll of War Brides. By Rev. William L. Stidger.

1. This article and the story of George Eliot's "Silas Marner" are alike in showing the necessity of love as an ennobling force. Compare the two works.
2. Prove the following proposition: "The women of America and of England during the war proved themselves noble."

### III. Is Uncle Sam to Keep the Railroads? By Donald Wilhelm.

1. Write two original character sketches of individuals suggested by the sentence: "There are individuals constitutionally for and against almost anything worth while."
2. Prepare the brief of a debate on the affirmative or the negative of the proposition: "The Government should continue to control the railroads."
3. Develop a paragraph of contrast on the condition of the railroads before the war and at present.

### IV. When the Bills Are Presented. By Richardson Wright.

1. Explain why mutual understanding and sympathy are necessary for any League to Enforce Peace.
2. Explain in what way the writer of the article proposes to bring about mutual understanding and sympathy among nations.

### V. Winning 4796 New Church Members. By William N. Bayless.

1. After you have read the article prepare a series of suggestions for the advertising of your school.
2. Look over the advertisements in this number of *The Independent*. Which ones do you consider most effective? Give your reasons.

### VI. The News of the Week.

1. Give a spirited speech in which you draw original conclusions from the British Army losses.
2. From the report of recent events that have happened in Germany draw conclusions concerning the character of the German people.
3. Give orally a short but clear account of what has been done recently along the former battle fronts.
4. Explain how the coming of peace is likely to affect the Bolsheviks.
5. Summarize the most important events of the week not connected with the war.

### VII. Editorial Articles.

1. Write in a single sentence the principal thought of every editorial article.
2. Select the editorial article that most impresses you. Give a speech in which you defend, or oppose, the proposition on which the editorial is based.

## HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

### I. International Trade Competition or International Trade Combination — Which?—"Equality of Opportunity."

1. "The Great War arose out of a struggle for the sources of raw materials," etc. Study the history of European colonial expansion from 1884 to 1914 with a view to proving this statement.
2. "The danger from Germany is eliminated, but the source of the danger remains." Does this statement mean that the editorial writer believes that great wars such as that which has just been finished will occur in the future?
3. "The British will not repeat that mistake." What provisions have the British made to protect their interests? How will these arrangements affect the interests of the rest of the world?
4. "Free trade has gone for good." In what sense does the writer make this statement? What system of international trade was proposed by the "Paris Pact of 1916"? What system has been proposed by President Wilson? By the Labor and Socialist parties of England, France and Belgium? Which system is most likely to insure future international peace?

### II. Revolution and Reorganization — "It Will Take Time," "The Revolution in Germany," "New Regime in Germany," "The Position of the Bolsheviks."

1. What does the first sentence in the editorial mean?
2. What lessons relative to the present revolutions in Europe are to be drawn from the history of the American Revolution and from that of the successive revolutions in France? In what respect do the present revolutions in Europe differ from the American and French revolutions of the eighteenth century?
3. Why will it "take time . . . to build up real republics in Russia, Siberia," etc.?
4. Why will the new republics in central and eastern Europe "be different in important respects from the republics in this western hemisphere"?
5. Is Germany likely to go the way of Russia? Is Russia likely to swing back into the line of orderly democratic states?

### III. The United States to the Rescue—"When England Was at Bay."

1. Reproduce as clearly as you can from this article a description of war time conditions in England. In what respect are the conditions described similar to those which existed in your own community?
2. Why did Mr. Holt expect to find a critical attitude toward the United States in England? Why was the attitude as friendly as it seems to have been?
3. "Indeed . . . our President is more Premier of England, France and Italy than Lloyd George, Clemenceau and Orlando." In what sense is this true? How do you account for the fact?
4. Why was it supremely imperative that the United States should have offered its military aid to the Allies in March, 1918, instead of waiting till its armies were more fully organized than they were at that time?

### IV. Government Control of the Railroads—"Is Uncle Sam to Keep the Railroads?"

1. After you have read this article answer the question, giving the reasons which you find in the text.
2. What economies have been introduced in railroad administration by Director General McAdoo? Could these same economies be maintained during normal peaceful times?
3. In what respects has railroad service been improved by national administration? Could these improvements have been made under private management under the interstate commerce laws which were in force when the war began?
4. What influences will be brought to bear to continue the national administration of the railroads when normal peace conditions have returned?

### V. Industrial Democracy—"Mr. Gompers Gives Warning," "Mr. Gompers's Forecast for Labor."

1. What is the point at issue between Mr. Gompers and Mr. Barr?
2. How was this difference settled in the days before the war? During the war? Outline the new industrialism for which *The Independent* pleads.

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## WHAT DO YOU KNOW?

Here are some snapshots at your general knowledge—a list of the questions given to the boys and girls of the Friends' School of Baltimore and of Germantown, Pennsylvania. They test excellently your knowledge of the textbook of current events. We shall publish the correct answers in an early issue.

Name: 1. The Food Administrator of the United States. 2. The Director General of Railroads. 3. The Secretary of War. 4. The Secretary of the Navy. 5. The general in command of the American troops in France. 6. The President of the United States Senate. 7. The Prime Minister of France. 8. The British Ambassador to the United States. 9. The great French sculptor recently deceased. 10. A sculptor of Lincoln. 11. The President of France. 12. The state which granted suffrage to women November, 1917. 13. The party or organization which deposed Kerensky. 14. The organization to which the Nobel Peace Prize for 1917 was awarded.

In what way distinguish: 15. Viscount Ishii. 16. Lord Northcliffe. 17. Nicholas Murray Butler. 18. Katherine Breshkovsky. 19. Ferdinand Foch. 20. Sir Robert Borden. 21. Anna Howard Shaw. 22. Rosa Bonheur. 23. Leon Trotzky. 24. Count von Hertling. 25. James W. Gerard. 26. Sir Herbert Beer-bohm-Tee. 27. George Eliot. 28. Florence Nightingale.

Explain: 29. Personal magnetism. 30. No Man's Land. 31. Wolf in sheep's clothing. 32. Bricks without straw. 33. The Blessés. 34. Barrage. 35. Habeas corpus. 36. Status quo ante. 37. A mercurial temperament. 38. Neutralizing straits. 39. An utopian project. 40. The House of Hanover.

What important events do you associate with: 41. Halifax. 42. Cambrai. 43. Brest-Litovsk. 44. Guatemala.

Who wrote: 45. Penrod and Sam. 46. Travels with a Donkey. 47. Over the Top. 48. Enoch Arden. 49. Pendennis. 50. Gulliver's Travels.

On what rivers located: 51. Rome. 52. Cologne. 53. Paris. 54. Montreal. 55. Belgrade. 56. West Point. 57. Cambridge (England). 58. Washington, D. C.

Explain or define: 59. Poilu. 60. Hangar. 61. Levee. 62. Volplaning. 63. Hibernator. 64. Fletcherize. 65. I. W. W. 66. Rookie. 67. Highbrow.

Why well known: 68. Henry Pomeroy Davison. 69. Col. E. M. House. 70. Samuel Gompers. 71. What is the chief material used in making newspapers? 72. What causes knots in boards? 73. Name the former Presidents of the United States still living.

Locate: 74. The White Sea. 75. Hog Island. 76. Cambrai. 77. Amiens. 78. Bagdad. 79. The Riviera. 80. Delphi. 81. The Pyrenees.

82. Arrange these names in the order of their time: Mark Twain, St. Luke, Vachel Lind, Homer, Sir Walter Scott, Shakespeare.

## REMARKABLE REMARKS

CARDINAL MERCIER—America saved us.  
EX-EMPEROR CHARLES—I feel I did my duty.

PRESIDENT MASARYK—I'm only an unspoiled boy.

COLONEL HOUSE—I always have a happy appearance.

E. J. DILLON—Bolshevism is Czarism upside down.

PREMIER HUGHES OF AUSTRALIA—What we have we hold.

THE EX-KAISER—Wouldn't Teddy look funny in a gas mask?

LLOYD GEORGE—Deferred castigation is the worst of all punishments.

EARL CURZON—The Allied cause was floated to victory on a wave of oil.

H. L. MENCKEN—A wife is almost always the more intelligent of the pair.

CHARLIE CHAPLIN—Restraint is a great word, not only for actors but for everybody else to remember.

SIR ARTHUR CONAN DOYLE—The village was full of Americans and Australians extraordinarily alike in type.

LADY DUFF-GORDON—You should wear the lightest colors and the lightest fabrics that circumstances will permit.

H. G. WELLS—The President is, for the time, the head, the mouthpiece, and representative, of intelligent mankind.

JOHN D. ROCKEFELLER, JR.—German philosophy must be reconceived and reconstructed from its very foundation.

DR. COHN—A world revolution will follow a world imperialism and world militarism, and will overcome them.

HERR ERZBERGER—The greatest ruthlessness in war presents itself in reasonable application as the greatest humanity.

MARSHAL FOCH—The Bible is certainly the best preparation that you can give an American soldier going into battle to sustain his magnificent ideal and faith.

ARCHIBALD HURD—The real secret of our victory in this war, as the historians will record, has been hidden from the eyes of the multitude but it will be revealed in after years, spelled out in eight letters—SEA-POWER.

## A BRITISH-AMERICAN UNIVERSITY

It has been suggested by Dr. J. Rendel Harris, of Birmingham, England, that Great Britain and America celebrate the tercentenary of the departure of the Pilgrim Fathers by uniting in the establishment of a British-American University at Old Plymouth. Dr. Harris's plan calls for the appointment of an American committee to co-operate with a British committee on arrangements, and to have the foundation stone of the new school laid by President Wilson or his representative. Such a school, it is claimed, would be a witness to the reunion of the great Anglo-Saxon peoples in spirit and ideals, and would be a place where international relations would be taught from the standpoint of freedom, brotherhood and progress.

# CARTOON COMMENT

## THE BOLSHEVIKI MUST GO

### A REVOLUTION THAT DESTROYS THE LIBERTY FOR WHICH IT FIGHTS

From "Nebelspalter," Zurich, we take the cartoon above, which has become a famous indictment of the peoples who would gain freedom by substituting anarchy for a tyrannical rule. The cartoon was first published to portray the Russian peasant hurling his symbol of government to destruction and unheeding the fact that he himself must go down with it. It is applicable to any anarchist in any land, whether it be Russia or Germany or the United States

### THE NEXT CANDIDATE FOR ELIMINATION

The cartoon below, drawn by Darling for the New York "Tribune," portrays graphically the new danger that threatens the peace of the world, just saved from the militaristic tyranny of an absolute monarchy. As we said in the editorial columns of *The Independent* two weeks ago: "Bolshevism is evidently a highly contagious disease. The German and Austrian authorities, having assisted in disseminating the germs in Russia, have been in terror lest it should spread to their own border, as at last it has. We may hope that so disciplined and educated a people as the Germans may avoid the reign of terror under which Russia now writhes. If they do not it will not be Germany alone that will suffer"

### TWO TYRANTS

"L'Asino," an Italian paper, makes the bitter comment above on the allegiance of the Bolshevik leader in Russia to the militaristic tyrant in Germany. But the Prussian pressure on Trotzky to institute his reign of terror has proved itself a boomerang that brought to Germany a similar unthinking will to destruction. Nelson Harding, of the Brooklyn "Daily Eagle," presents in the cartoon below a strong picture of the dangerous power of this False God—Force, striking down the very people who invoked him

### WHEN THE DEMON IS UNBOTTLED

At the left is a cartoon by Nelson Harding, published in the Brooklyn "Daily Eagle," to portray the fury of the Russian revolution coming home to roost. President Wilson presented from the viewpoint of the liberty-seeking peoples the fear of the same danger when he said in his first peace speech: "The peoples who have just come out from under the yoke of arbitrary government and who are now coming at last into their freedom will never find the treasures of liberty they are in search of if they look for them by the light of the torch. They will find that every pathway that is stained with the blood of their own brothers leads to the wilderness, not to the seat of their hope. They are now face to face with their initial test"

HARPER'S WEEKLY

## RECONSTRUCTION

IF the Great War had ended as it began, a clear-cut conflict between definitely established governments, the settlement would be comparatively easy. The diplomats from each of the belligerent nations would sit around the green table, provinces would be transferred from one country to another, colonies would be parceled out, commercial concessions and indemnities exacted, and then, perhaps, a league of nations or some similar structure erected. In short, the Concert of Europe (with America and Japan in it, why not the Concert of the World?) would act solely as a "constituent assembly," while the ordinary processes of administration would continue in the meantime to be carried on as usual by the individual governments.

But the actual situation is much more complex. We have not only a world war but a nearly world-wide revolution. A traveler might leave the trench line in France or Flanders and walk eastward to the Pacific, passing thru the full breadth of Germany, Poland, Russia and Siberia to Vladivostok, or start at Trieste for a trip thru Austria, Hungary, the Balkans, Asiatic Turkey, Persia, Russian Central Asia and many provinces of China, without in either case coming upon a solidly established government, an unmistakable frontier or a community enjoying internal stability and peace. Not since the Middle Ages has so large a portion of the earth's surface been given over to anarchy and civil strife. Every supplanting nationality in central or eastern Europe, taking to heart the maxim that possession is nine points of the law, is trying to make its sway effective over as large an area as possible before the peace is signed. No

one now can say exactly just what nations exist nor what provisional government in each case has the best legal title to be considered representative.

A cold and hungry winter is coming. Political disorder will halt the production and distribution of the necessities of life. This shortage will, in turn, create fresh disorder and new revolutionary outbreaks. Thus conditions will grow steadily worse, in a vicious circle, until strong provisional governments arise within the ungoverned area or government is imposed from without by the nations which still retain political stability.

It will, therefore, probably be necessary for the victorious democracies of the Entente and of America to add to their task of formulating a just basis of settlement the still more formidable task of seeing to the administration of half Europe and half Asia for the critical months between the signing of the armistice and the signing of the peace treaty. The Concert of the Powers must be a legislative and executive body as well as a constituent assembly. Whether or not a league of nations be erected to govern the world after the war, some one must see to it that hundreds of millions of human beings are in the meantime protected from famine, plague, disorder and their own jealousies and passions. In a word, what is necessary is an *international provisional government* for purposes of reconstruction in all those countries where the ordinary machinery of administration has broken down. From such practical tasks, and the solutions which experience will teach us, may come the future constitution of the league of nations.

## THE PRESIDENT ON THE FIRING LINE

THE latest news from Paris and London shows that the President is needed in Europe at this crisis if America is to secure all the aims for which she has been fighting. Now that the victory is won there is a disposition to regard the war as a purely European affair in which we have no concern. For instance, the Associated Press despatch of November 25 from Paris says:

Allied statesmen have fully appreciated the effect of American arms in winning the decision. Nevertheless, it was contended by some that had been a controversy among European nations, and the winning group, it was suggested, supposed that America, having accomplished her aim, would return to her detachment and allow the countries intimately concerned to arrange a settlement according to the European viewpoint of the situation.

Some of the Allies—and even some Americans—seem to have forgotten that the Germans did not surrender unconditionally. The Germans did not surrender on the Allies' conditions. The Germans surrendered on the American conditions. They explicitly stated that they accepted the terms laid down in the speeches of the President from January 8 to September 27 inclusive. These speeches un-

folded a very definite and comprehensive plan for world organization and reconstruction, very different from anything previously proposed by the Allied Governments. It was essentially an American idea, the extension to the whole world of the principle of federation on which the United States was founded and of the Monroe Doctrine on which its foreign policy was developed.

The conditions dictated by the President were accepted by Germany, and to make this fact perfectly plain to the world the President required the German Government twice to repeat their acceptance in the most explicit terms. The Allied Governments also accepted them with one exception, the freedom of the seas.

With this possible exception, then, all the belligerents have subscribed to the American peace plan, and it was upon this understanding that the Germans submitted to the terms of the armistice dictated by General Foch and Admiral Wemyss. If, then, the Germans should refuse to conform to the American peace plan which they have accepted, the Allies would be justified in using any forcible

measures necessary to compel them to keep to their agreement. If, on the other hand, the Allies should refuse to conform to the American peace plan, they would be in honor bound to return the German fleet and to allow the German army to reoccupy the evacuated territory. Of course, they would never do this, so we may regard it as settled that the principles laid down by the President will be made the basis of the Versailles convention. But there will be many difficulties and contentions as to the application of these principles that the President can best smooth over by personal conversations.

The idea that the President should go to Paris is not a new notion. It has been under discussion here and abroad for more than a year. Theodore Stanton in the latest number of *Mercury de France* gives some correspondence on the subject that took place in the summer of 1917. A distinguished French professor and man of letters wrote then to an American friend:

It would be excellent if President Wilson would visit Paris as soon as possible. I am convinced that this voyage would hasten the end of the war. If you are of my opinion try to bring this idea before the President himself. I cannot explain to you all my reasons in a letter which *en cours de route* might fall into the hands of the Germans. Your good sense will surmise them. I was one of the first journalists in France, perhaps the first, to arouse confidence in President Wilson considered as a citizen of the world.

The letter was forwarded to the President, who replied from the White House on August 21, 1917, as we translate it back again from the French:

The communication of Professor — is really very interesting and very agreeable to me personally. But it is hardly probable that I can actually leave the United States altho I would be glad to if it were possible.

This shows that the need of his presence in Europe was realized then as it is now by those who sympathized with his plans, and that the President had considered both the desirability and difficulties of the move.

## ATTACH YOUR OWN MORAL

FOR the last half century the destinies of Europe have been directed by six Great Powers. Three were established on a basis of class rule: Germany, Austria-Hungary and Russia. Three were democratic and liberal: Great Britain, France and Italy. All of the autocratic powers have been crushed in war and wrecked by revolution in the last few months. All of the democratic powers remain secure and unshaken.

## THE SENSIBLE THING

ON hearing that that the Government proposed to bring back for burial in this country the bodies of American soldiers fallen abroad, ex-President Roosevelt writes to General March, Chief of Staff:

Mrs. Roosevelt and I wish to enter a most respectful but most emphatic protest against the proposed course so far as our son Quentin is concerned. We have always believed that "Where the tree falls, there let it lie."

We know that many good persons feel entirely different, but to us it is painful and harrowing long after death to move the poor body from which the soul has fled. We greatly prefer that Quentin shall continue to lie on the spot where he fell in battle and where the foe buried him.

In reply General March says he is in entire sympathy with Mr. Roosevelt's attitude and that General Pershing has authority to pursue the same course in cases where the relatives express a similar wish. We hope that most of them will join the ex-President in this protest, for the transportation of corpses long distances is a heathenish custom. We think it absurd in the Chinese that on traveling abroad they insist on providing for the return of their remains to the Celestial Kingdom, in which they were born. Our boys who have made the supreme sacrifice have earned the right to rest in peace in the land they helped to free.

The idea of disinterment is equally repugnant to sense and sentiment. The money it would cost were better spent in saving the lives of the starving children of Europe. The truer feeling about this was voiced in the sonnet written by Rupert Brooke shortly before he sailed with the British Mediterranean Expeditionary Force in February, 1915, and died in the Aegean:

If I should die, think only this of me:

That there's some corner of a foreign field  
That is for ever England. There shall be

In that rich earth a richer dust concealed;

A dust whom England bore, shaped, made aware,

Gave, once, her flowers to love, her ways to roam,

A body of England's, breathing English air,

Washed by the rivers, blest by suns of home.

And think, this heart, all evil shed away,

A pulse in the eternal mind, no less

Gives somewhere back the thoughts by England given:

Her sights and sounds; dreams happy as her day;

And laughter, learnt of friends; and gentleness,

In hearts at peace, under an English heaven.

## NATIONAL AND INTERNATIONAL PREPAREDNESS

FROM one of the greatest and best known generals in France, a man who spent all his life as a soldier and who has had opportunities second to none to study at close range the various currents of official and popular opinion in Europe during the Great War, the editor of *The Independent* has just received the following remarkable letter, part of which we herewith reproduce:

I am firmly convinced that the very corner stone of a League of Nations must be total disarmament. In other words, the nations must accept the Fourth of the Fourteen Declarations of President Wilson, to the effect that armament must be reduced to the minimum consistent with the maintenance of internal order. You would be surprised to know the number of prominent people who, in private conversation and when they can speak their ideas without reserve, believe, or say that they believe, that such disarmament is a dream. And the people to whom I refer belong to the class which will have a great deal to say in the adjustment of future world conditions after this war is over. The peoples themselves, I am sure, are sick of the whole business; but the political men and many of the great business men, as a result of the prevailing attitude of international suspicion still believe that their only security is in the development of organized forces.

What could be more absurd than a League composed of nations armed to the teeth against each other? And, if the United States is to play any part in such a League, it also must be armed. Are not all of the Fourteen War-Aims, enunciated by President Wilson, to be summed up in the Fifteenth one—implied tho not written—to the effect that "An essential war-aim of the United States is to free them from the possibility of having to take up in times of peace the intolerable military burden under which all Europe has for so long been staggering"?

As I have said above, the common peoples everywhere are sick of the whole business—I mean are sick of the conditions which brought on the war, among which I believe the most influential one was the fact of the existence of these great armaments and a believed necessity on the part of the Governments to justify their use. Therefore, I believe that it is of the greatest importance that a sentiment should be developed and organized among the common people which will dominate the members of the Congress which will decide future world conditions. I believe that the people of the United States are in the most favorable position for the development of such a sentiment. Therefore, I believe that the leaders of thought in the United States should hammer and keep on hammering into the minds of the people the real significance of the Fourth War-Aim of President Wilson—total disarmament. What is the use of super-dreadnaughts, dreadnaughts, and battleships to guard the trade routes of any nation, provided no other nation has such ships; provided no nation has any more powerful vessel than revenue cutters for the policing of her own coasts and her internal waters? *German* militarism is only a symptom of the diseased condition of the world's blood. It is *European* militarism, *World* militarism, that is the curse of the world.

The general is right. But disarmament cannot ensue unless a strong League of Nations is established at the Peace Conference. If the nations now have learned nothing from their four years of carnage, if they sink back to the old

days of mutual distrust and intrigue, each one remaining the sole guarantee of its own integrity, then they shall all have to arm to the teeth even tho the result end in an even greater and more terrible war than the present one.

The question is national preparedness, militarism and war versus international preparedness, disarmament and peace.

## SINCE 1870

THE united German Empire and the Third French Republic were born during the war of 1870-71. They started at the same time on a career of national development after some three generations of political experiment and upheaval; they started fairly with equal area and approximately equal population. That the German experiment had been a marvelous success was admitted almost universally till the present war, and in some respects (other than moral) it must be admitted more emphatically now than ever. So great has been the material development of united Germany that it was the fashion as recently as a decade ago to moralize on the decline of French power and prestige under democratic institutions in contrast to the triumphs of Imperial Germany. The population of France remained practically stationary; that of Germany increased by more than half as much again. German industry, trade and sea power overpassed French. Germany displaced France as the dominant military and diplomatic power of continental Europe. German was gaining over French in the curricula of foreign schools. Many were in haste to draw the conclusion that democracy was necessarily a failure and that if France had stuck to the Empire of Napoleon or had restored the aristocratic traditions of the Bourbons she might have held a higher rank among the nations.

Even the harshest critics of France admit that the last four years have been the most glorious in her history. But are these achievements a sudden miracle or the legitimate flower of her years of peace under the Republic? Have we, perhaps, been unjust to the accomplishments of France between the two wars? Just what has the Third Republic accomplished to set over against the imposing deeds of the Empire beyond the Vosges?

Firstly, then, France has attained political stability. This seems a strange thing to say of a nation which has had fifty-nine changes of ministry, while Germany has had only eight Imperial Chancellors in all, and only five up to last year. But the Third Republic has far outlasted any of the many experiments in government which France tried from 1789 to 1871. As Thiers predicted, it has been found to be the form of government which divides the nation least. When the French are tired of their governors they no longer build barricades and set up guillotines; they have a ministerial "crisis" which displaces a premier without violence and puts into power a man of much the same political convictions and often a colleague in the same cabinet. An avowed enemy to the Republic is almost as rare in France today as in the United States.

Secondly, France has attained national strength. The army of Louis Napoleon, as the late von Moltke demonstrated, was only a pretentious sham. The army commanded by Joffre and Foch is, for its size, probably the best army in the world. An unjust and partial conscription has been replaced by a strictly impartial system of universal service under the Republic; merit has displaced favoritism in appointments; science has prevailed over the cult of "glory" and pretentiousness.

Thirdly, France has educated her people. The Germans won the Franco-Prussian war by the "thinking bayonet," the skill of an educated army. The Third Republic started out with a heavy handicap of illiteracy; a handicap which has practically disappeared. The thinking bayonet is now a French weapon!

Fourthly, France has built an Empire. It is a strange paradox that "the Empire" which came to an end in 1870 left France with a bare foothold on the north coast of Africa and a few less important colonies in the Far East and in the West Indies, whereas the Republic has expanded that Empire into the second most important colonial domain in the world; a worthy rival of the British, and in both quantity and quality immeasurably ahead of the (late) German overseas Empire.

Fifthly, France has done something for the welfare of her own people. Few realize that hardly a trace of French welfare legislation, of care for the interest of the workers, or even of the most ordinary freedoms of press and assemblage existed under the rigid bureaucracy of the Empire. While politicians were scuffling and journalists shouting, so that the listening world mistook French politics for a form of light amusement, reform after reform was being enacted into law and abuse after abuse was being eliminated. The world knows too little about the solid legislative work accomplished in France underneath all the din and smoke of the perpetual "crises."

Sixthly, France has eliminated from politics, after a struggle of peculiar bitterness and injustice on both sides, the "Church issue." Since disestablishment it is no longer necessary, as once it seemed to be, to choose between belief in Catholic Christianity and belief in a Christian political system, between the rights of God and the rights of man. Germany has not yet taken this enlightened step and has ahead of her many a bitter fight over the rival claims of Church and State.

Seventhly, France has eliminated militarism. The battle between the claim of the army to rule the nation and the claim of the nation to rule the army was fought to a finish in the Dreyfus case, and the victory for the civil power was so complete that the issue has never been revived. In France Poincaré and Clemenceau, the civilians, rule, and General Foch is their honored agent. In Germany Hindenburg and Ludendorff, the generals, have ruled, and the Chancellor was only their puppet.

Eighthly, France has introduced ethics into public policy. It was not conspicuous in the days when Louis Napoleon plotted a Mexican Empire or schemed to annex Belgium; it was not prominent in the beginnings of French overseas Empire. But under the Republic, France has sought peace, has endured insults and injuries from Germany for the sake of peace, has fought openly and honorably in strictest self-defense, has administered her colonies with an eye to the welfare of the natives, and has generally cast her influence on the liberal side in international affairs.

Ninthly, French scholarship and science has come abreast of German, so that just before the war American and English scholars were flocking to the French universities as once they did to the German. With Bergson and Boutroux, French philosophy took the world leadership so long held by Germany. The solid achievements of French thought under democratic institutions, bewailed by so many French literary men as the rule of the mob, have been far greater and more important than at any previous period.

Finally, there has been a marked and unmistakable spiritual and ethical growth among the French people. Some of the poison of the decadent period has been eliminated from the national literature, and we have the wholesome romanticism of Rostand and the strenuous moral teaching of Brioux instead of the "Fleurs du mal." Pasteur has displaced Napoleon as the national ideal. The Frenchman at war, retaining his old dash and enthusiasm, has acquired a steadfast endurance not marked in 1870 and yet surely no growth of yesterday. The Frenchman at peace is a better citizen than his ancestors of the *coup d'état* and the Commune. In every respect France was a better country when she faced the old enemy after a generation of the Republic.

# THE STORY OF THE WEEK

## The Surrender of the German Fleet

The most imposing and momentous naval spectacle in the history of the world was the surrender of the major portion of the German navy. The vessels surrendered consisted of nine battleships, five battle cruisers, seven light cruisers and fifty destroyers, valued at \$350,000,000. The fleet that went out from the British base to receive them numbered four hundred. Besides the British there were a French cruiser, the "Aube," and five American battleships, whose names are now for the first time given, the "New York," "Texas," "Arkansas," "Wyoming" and "Florida." Australia, New Zealand and Canada were also represented. The eighty-seven U-boats were surrendered at various times. Among them are the "U-153," known as the "Deutschland" when she visited America with a commercial cargo in 1915, and the "U-139," which sank 126 vessels.

The preliminaries had been arranged on November 15 and 16 on board the flagship "Queen Elizabeth" between Admiral Beatty and the German delegates headed by Admiral Meurer, who came in the cruiser "Königsberg."

Before sunrise on November 21 the British Grand Fleet left their moorings in the Firth of Forth and fifty miles out drew up in two lines six miles apart, with all their guns manned ready for action in case of treachery. From the Commander in Chief came the significant wireless message: "The German flag will be hauled down at sunset today. It will not be hoisted again without permission."

The German armada filed slowly between the lines of the British fleet, led by the British cruiser "Cardiff." At the head of the procession came the battle cruisers; first, the "Seydlitz," then the "Moltke," "Hindenburg" and so forth, followed by the dreadnaughts and cruisers. The fifty destroyers, five abreast, brought up the rear. A British dirigible hovered over the line of captured ships as they were escorted to their anchorage in the Firth.

Admiral Beatty, when cheered by his men on the "Queen Elizabeth," merely replied: "I always told you that they would have to come out." In his signal to the fleet he seems to regret that there was no battle:

The greatness of this achievement is not lessened by the fact that the final episode did not take the form of fleet action. Altho deprived of this opportunity which we so long eagerly awaited and of striking the final blow for the freedom of the world we may derive satisfaction from the singular tribute that the enemy has accorded the Grand Fleet.

When King George visited the "New York" the British standard was raised above the Stars and Stripes. He proposed that arrangements might be made for joint maneuvers every year between

© Underwood & Underwood

## THE LATEST DICTATOR OF RUSSIA

By a coup d'état at Omsk, Admiral Kolchak, former commander of the Black Sea fleet, has seized the control of the Russian government from the All-Russian Provisional Government, which in turn wrested it from the Bolsheviki

## THE LOSSES OF THE WAR

Great Britain.....	660,000
France .....	1,250,000
Russia .....	2,000,000
Italy .....	500,000
Serbia .....	200,000
Belgium .....	100,000
United States.....	30,000
Portugal .....	10,000

Allied dead .... 4,750,000

Germany .....	1,750,000
Austria .....	1,000,000
Turkey .....	300,000
Bulgaria .....	50,000

Teuton dead.... 3,100,000

All belligerents.. 7,850,000

This table has been compiled from available data by the New York Evening Post. Except in the case of Great Britain the figures are not authoritative.

## OUR CASUALTIES

Total casualties in the American expeditionary forces up to the signing of the armistice, as announced by General March, were divided as follows:

Killed and died of wounds....	36,154
Died of disease .....	14,811
Died of other causes.....	2,204
Wounded .....	179,625
Prisoners .....	2,163
Missing .....	1,160

Total ..... 236,117

the British and American fleets, and this suggestion was heartily seconded by the American officers.

## The Bolsheviki Movement in Germany

The German revolution seems to be

taking the same course as the Russian. The Imperial German Government has been replaced by a group of moderate Socialists with Ebert as Chancellor just as the Kerensky cabinet succeeded the Czar's Government. But in Germany, as in Russia, the soviets appear to have the real power and may at any moment overthrow the moderates and declare a proletarian dictatorship. In fact this has already happened in Dusseldorf, Bremen, Kiel and other industrial centers. Corresponding to the Bolsheviki of Russia is the Spartacus faction, chiefly composed of the Independent Socialists who refused to support the war and in consequence seceded from the Social Democratic party, which supported the German Government during the war. Ebert and the Majority Socialists are willing to have a constituent assembly elected in January to decide upon the form of government, but the Spartacus faction will fight rather than surrender the Government to the *bourgeoisie*. They demand the repudiation of all public debts, the confiscation of fortunes, the establishment of a six or three hour day and other radical measures. The soviets or Councils of Workmen and Soldiers of Oldenburg, Hamburg, Bremen and Schleswig-Holstein, that is, of the North Sea provinces, have united to form an independent republic with the Free City of Hamburg as the capital.

In southern and Catholic Germany the radical views do not meet with the same acceptance, and Bavaria threatens to secede unless a constituent assembly is soon called and a democratic Government established. At Berlin the Spartacus party is growing in power, altho they have not yet broken with the Ebert Government and have suspended the formation of their proposed Red Guard. The Government has been strengthened by the addition of Karl Kautsky and Edward Bernstein as Under Secretaries of State. Kautsky, altho an Independent Socialist, is an orthodox Marxian and opposed to Bolshevism. The reserve and returned soldiers are in general anti-Bolshevik.

In some respects revolutionary Germany differs decidedly from the old. The soldiers no longer salute their officers but address them as "comrade." Policemen are unarmed or carry only rubber clubs. The red flag has everywhere replaced the Imperial and Royal insignia. Things once *verboten* are now permissible, and strangers no longer have to register at the police station.

International Film

#### WHERE THE YANKS KEEP THE WATCH ON THE RHINE

This view of the famous river shows part of the territory that our troops are occupying now. On the left bank is the town of Boppard, nine miles south of Coblenz

Confessional distinctions are abolished and the Church is to be separated from the State.

**Free Belgium** Belgium is now freed in a triple sense: first from German rule, second from her own antiquated and oppressive laws, and third from the limitations imposed upon her by the European Powers. King Albert delivered his first speech from the throne, to which he has been restored on November 22, in the Parliament Chamber at Brussels. As he entered he stopt to shake hands with Burgomaster Max, who was imprisoned by the Germans; Cardinal Mercier, who protested against the oppression of his people, and General Leman, who defended Liège. General Pershing and Brand Whitlock, American Minister to Belgium, were present.

In his speech the King of the Belgians exprest to the Allies and to the United States, the "new and stalwart ally which added the weight of her effort, so great and enthusiastic, to that of the other nations and caused our formidable adversary to totter." He promised his people equal suffrage for all men and equality in the use of French and Flemish. But the most important paragraph is the abrogation of the status of guaranteed neutrality under which Belgium has existed since 1831:

Belgium, victorious and freed from the neutrality that was imposed upon her by states which have been shattered to their foundations by war, will enjoy complete independence. Belgium, reestablished in all its rights, will rule its destinies according to its aspirations and in full sovereignty.

**Cossacks Take Kiev** When the German troops were withdrawn from the Ukraine the question was who would get it, the Bolsheviks of Moscow or the Cossacks of the Don?

The question is apparently answered in the capture of Kiev, the capital of the Ukraine, by General Denikin, the Cossack commander.

The Ukrainians, or Little Russians, who have never been contented under the rule of the Great Russians, a year ago took advantage of the overthrow of the Kerensky Government to break away. The Ukrainian Rada, or national assembly, declared independence and hastened to make peace with Germany at Brest-Litovsk, thus compelling the Bolsheviks of Petrograd to follow suit. Kiev was then in the hands of local Bolsheviks, but they were expelled by German forces and the Rada nominally installed in the capital. But the Rada, not proving sufficiently subservient, the Germans dismissed it and set up a tool of their own, General Skoropadski, as Hetman or Dictator of the Ukraine. A

few months ago he visited Berlin and was received with great honor by the Kaiser's Government. Last summer Kiev was the center of a conspiracy on the part of the Cadets, in which Professor Milyukov was said to be implicated, for the restoration of the autocracy in Great Russia with German help.

The Cossacks of the region east of the Ukraine refused to join either the Ukrainian People's Republic or the Bolshevik Soviet Republic, but declared their independence and formed several provincial governments, such as those of the Don, Kuban, Astrakhan, and Terek. Last July by a treaty signed at Rostov-on-the-Don the several Cossack governments united to form the Federal State of South Russia. In the Cossack movement, as in the Ukrainian, German intrigue has been active. General Krasnov, Hetman (Headman) of the Don Cossacks, openly declared his alliance with Germany, and he was supported in this by the Assembly of the Don army last September. The Bolsheviks assert that 25,000 have been shot under the rule of Krasnov.

Lately it appears that the Kuban General Staff, with its seat at Ekaterinodar, has set up a government of All Russia, which title has been also claimed by the Omsk, Ufa, and various other governments. The Foreign Minister of the Kuban Government is Sazonov, who was the Foreign Minister of the Czar before and during the early part of the war.

In August General Denikin was reported so severely wounded in a fight with the Bolsheviks that he had to be replaced by Orlov. General Alexiev, the former commander in chief of the armies of the Russian Empire, continued to make war against the Bolsheviks with such Cossacks as he could get together. But he died last October, and was

#### THE GREAT WAR

November 21—German fleet surrenders. Americans enter Luxembourg.

November 22—King Albert enters Brussels. Ex-Crown Prince of Prussia exiled to Dutch island of Wieringen.

November 23—Poles capture Lemberg, capital of Galicia, from Ukrainians. Cossacks under Denikin capture Kiev.

November 24—Admiral Kolchak and General Semenov each claims to be dictator of Siberia. Eighty-seven U-boats have been surrendered.

November 25—Bolshevism gaining in Germany. American troops being shipped home.

November 26—Cologne Soviet offers prize of \$20,000 for ex-Kaiser and Crown Prince dead or alive. Rumanians of Transylvania proclaim independence of Hungary.

November 27—Bavarian republic breaks with Berlin. Peru demands indemnity for Chilean riots.

succeeded by Denikin, who has now forced the surrender of Skoropadski, the Dictator of the Ukraine. Shortly before his fall Skoropadski is said to have turned toward the Entente and to have declared for a federal union of all Russia. But the Entente Allies are reported to be supporting Denikin in overthrowing the Ukrainian Government.

**A Coup d'Etat at Omsk** The kaleidoscopic changes of the Russian Government are difficult to follow. Boris Bakhmetev is still nominally Russian Ambassador to the United States, but it is hard to tell sometimes what government he represents. On November 7 he presented to President Wilson an appeal from Nikolai Avksentiev, President of the All-Russian Provisional Government of Omsk, Siberia, asking for American recognition and aid. This Government, the Ambassador said, had the support of "the people of Russia, the regional governments, the convention and committee of the members of the Constituent Assembly and the zemstvos and municipalities." But ten days later Avksentiev was in prison and the supreme power was in the hands of Admiral Kolchak. The *coup d'état* was accomplished by three military officers, who arrested the President and three of his supporters. Premier Vologodsky, who was a member both of the Directorate and of the Siberian Government, disapproved of the arrest of his colleagues, but authorized the dictatorship of Kolchak. The new Dictator in his first proclamation declares his aims to be:

The creation of a fit army, the conquest of Bolshevism, the organization of right and order, so that the people can select the form of government they desire without hindrance and be able to achieve their ideas of liberty.

The All Russian Government has gone to pieces. Having decided to bear the burden of the cross I declare I will not follow the road of reaction or the road of a party struggle which would lead to oblivion.

Admiral Kolchak was in command of the Black Sea fleet when it was seized by the Bolsheviki. In 1917 he came to America to gain support for the Kerensky government. In his present usurpation of power he is supported by General Horvath, who attempted a similar *coup d'état* at Vladivostok a few months ago which was suppressed by the Allies. Horvath was allowed to go free on condition that he declare allegiance to the Omsk Government, which he has now assisted to overthrow. General Semenov, who has been the leader of the anti-Bolshevik forces in Siberia, refuses to support Kolchak and has declared Trans-Baikal Siberia independent. The American State Department is reported to be pleased with Kolchak's act.

**Genealogy of Russian Governments** The fallen Government of Omsk is the fifth that has been set up in the last four months in opposition to the Bolsheviki and by favor of the Allies. The first of this series was that started in July

Bain

**THE PEACE DELEGATE FROM JAPAN**  
Viscount Kato, former Foreign Minister of Japan and in 1912 the Japanese Ambassador to London, is head of the Japanese envoys who will attend the peace conference in France

## MORE MONARCHS GONE

In our issue of November 23 we published the names of twenty-two emperors, kings and princes whom the war had displaced. Below we give a supplementary list of those reported in the two weeks since as abdicated or suspended. On account of the lack of space and high cost of paper we mention only actual rulers. If we should include their heirs and relatives who have lost their rank the names would number 278 for Germany alone.

Ludwig III, King of Bavaria.  
Friedrich II, Grand Duke of Baden.  
Charles Edward, Duke of Saxe-Coburg and Gotha.  
Adolf, Prince of Schaumburg-Lippe.  
Bernhard Friedrich, Duke of Saxe-Meiningen.  
Heinrich XXIV, Prince of Reuss, elder line.  
Marie-Adelaide, Grand Duchess of Luxemburg.  
Ernst II, Duke of Saxe-Altenburg.  
Gunther, Prince of Schwartzburg-Rudolstadt.

(To be continued)

CANNED!

on the Murmansk coast by Nikolai Tschaikovsky, a revolutionist of the old fashioned sort. It was by virtue of the invitation from this Government that the Allies derive their authority for sending troops to the Arctic coast. But the Tschaikovsky Government was expelled from Archangel even in the presence of the Allied and American troops, so after being set up a second time it assumed a subordinate position to a Government set up in September at Samara, on the Volga, of which Avksentiev, Minister of the Interior in the Kerensky cabinet, was head, and General Alexiev was commander in chief. But Samara was captured by the Bolsheviki, so President Maslov of the Czecho-Slovak National Council organized at Ufa an All-Russian Provisional Government consisting of a directorate of five members, including Avksentiev and Tschaikovsky, who were to be permanently, absolutely and irremovably in power until the Constituent Assembly should meet.

But in October the Ufa Government had to move out of Europe and into Siberia. Here it joined the Government of Omsk, and became the fourth which had been set up in that city. At Omsk there was an opportunity to raise an army under the protection of the Czecho-Slovaks and the Allied troops. But the Czecho-Slovaks are now anxious to return to their native land now that Bohemia is free; and the Allies, since the German peril is over, no longer have the same reason for remaining. If foreign support should be withdrawn it is doubtful if the Omsk or any of the other governments would prove strong enough to check the advance of the Bolsheviki into Asia.

In the course of this migration eastward the Russian Government has gradually shed its radical members. The earlier governments were largely socialistic, altho anti-Bolsheviki. But now the power has passed into the hands of the military, who are apt to be monarchists. Kolchak is strongly anti-Socialist and anti-Semite. The Omsk Directorate still retained some Socialists of the more moderate sort whom the military party was anxious to eliminate, if necessary, by force. The real bone of contention is doubtless the \$325,000,000 in gold which the Czecho-Slovaks took from the Bolsheviki at Kazan and brought to Omsk.

**Civil War in China** While the attention of America has been monopolized by the European war little notice has been paid to the conflict in China, altho this involves the fate of four hundred millions and has cost the lives of many thousands. The southern provinces, with headquarters at Canton, have been thruout the year in rebellion against the Peking Government and the whole country is in disorder. The military governors (tuchuns) of the various provinces have armies of their own and their operations can hardly be distinguished from the organized brigandage that is also devastating the land. The Southerners have appealed to the United

States for intervention in their behalf by letter from Wu Ting-fang, former Minister to Washington, and by envoy in the person of Wang Cheng-ting, who secretly sailed from Shanghai and is now in America. Other leaders of the Southern movement are Dr. Sun Yat-sen, the first President of the republic, and Tang Shao-yi, an American college graduate.

The Southerners call themselves the Constitutional party and their contention is that ex-Premier Tuan Chi-yui violated the constitution when he forcibly dismissed Parliament last June for refusing to declare war against Germany at his demand. The Allied Powers offered strong inducements to China to enter the war, the cancellation of \$70,000,000 indemnity to Germany, the remission of the Boxer indemnity of \$14,000,000 a year and generous loans. The President, Li Yuan-hung, was won over to the Allied cause and Premier Tuan sent a bill to that effect to Parliament with a company of soldiers to see that it was put thru. But Parliament, owing, it is said, to the intrigues of the German Ambassador, Admiral von Hintze, manifested resentment at this show of force and refused to pass the bill. So Tuan dissolved Parliament and declared war anyway. This precipitated a tumult, resulting in a series of rapid changes of government during which the Manchu boy who once was Emperor, was put back on the throne for a reign of ten days. The final outcome was the inauguration on October 16 of Hsu Shi-chang, guardian of the ex-Emperor. The attempt to elect a Vice-President failed, altho \$800,000 is said to have been spent on Parliament in the interest of General Tsao Kun. The current price for votes was \$3000, but the payment was made by checks, which the banks were notified to refuse to honor unless the candidate was elected. The members of Parliament struck at this and demanded \$2000 cash and \$1000 if the election was carried.

President Hsu tried to open peace negotiations with the Cantonese, but they refuse to recognize the validity of his election. Three Northern armies sent against them have been defeated and a large part of the money advanced by the Allies to enable China to make war against Germany or at least against the Bolsheviki has been wasted in this futile strife. The Allies have protested against this and other failures on the part of China to participate in the Great War. The appointment of a Minister to the Vatican is also alleged by them as a pro-German act. In compliance with this protest the Chinese Government recalled its Minister and declined to receive the papal nuncio, Mgr. Petrelui, a friend of Admiral von Hintze. It was reported that the United States had joined with Great Britain in an offer to mediate between the North and the South, but Secretary Lansing declared: "There is not a word of truth in it. It is without any foundation whatever." China has already started her peace delegates for Europe. At the head will be Foreign Minister Lu Cheng-hsiang and with him will be Dr. Wellington Koo, Minister in the United States. China's chief concern at the conference is to secure the return to her of Kiao-chau, the Chinese port formerly held by Germany but taken by Japan early in the war.

#### Peru and Chile Break Relations

On account of anti-Peruvian riots in Iquique and Antofagasta, two of the principal seaport cities of Chile, the Peruvian Government has withdrawn its consuls from Chile. The Chilean Government, fearing similar outbreaks, withdrew its consuls from Peru.

The riots grew out of an old dispute between Chile on one side and Peru and Bolivia on the other concerning the border province of Tacna, which is the northernmost province of Chile next Peru. It is mainly a rainless desert, but

there are silver and copper mines there and extensive nitrate deposits. A railroad runs from its seaport, Arica, forty miles inland to the capital of the province, Tacna, where the decisive battle was fought in 1880 that made the Chileans victorious over the Peruvians and Bolivians. The military success, however, did not prevent the border dispute from continuing to smoulder.

It seems probable that the present diplomatic rupture was induced by the misstatements of the Peruvian consul at Iquique. His authority has since been canceled and the Peruvian Government has made a formal apology to Chile.

#### Argentina's Hardships

The resignation, accepted on November 17, of Argentina's minister to this country, the highly respected Dr. Romula Naon, seems to have direct reference to the political turmoil at Buenos Ayres, where even the resignation of President Irogoyen is freely discussed. The troubles are explained as an outgrowth of the Government's attempt to remain neutral in the war in the beginning thru German influence and general hesitancy, and later in a sort of political self-defense.

It appears certain that Argentina has got into serious financial straits, and the Government's proposal of an income tax as a remedy has increased its unpopularity. The class of persons in Argentina who have fixed or regular incomes is comparatively small. The greater part of the men of means derive their money from agriculture, the results of which vary from year to year with weather, etc., so that it is very hard to figure on returns in advance.

The proposition is to put a tax of 2 per cent on incomes of \$1500, Argentine paper, per annum, and a progressive increase on larger incomes, up to 7 per cent on \$100,000. Further, persons resident abroad will pay a fixed tax of 3 per cent on revenues obtained

#### THE MEN WHO ARE BRINGING OUR TROOPS HOME AGAIN

These officers of the U. S. Navy under Admiral Glenzes directed the trans-Atlantic transportation of our troops to France and are arranging now for their return. From left to right in this photograph are: Admiral Glenzes, Captain DeWitt Blamer, Captain Ray Spear, Flag Lieutenant Lawson, Captain C. B. Morgan, Major Tobbs, U. S. M. C., Captain Fiske, Commander Perkins, Ensign O. B. Jennings, Ensign W. H. Long, Lieutenant C. W. Berwind

from this republic, the same applying to private individuals and corporations, while limited companies and commercial associations generally will be still more heavily taxed. In their case the 2 per cent charge will be applied to profits. The Government would hardly try this, indeed, were it not in sore need of larger revenue. Prices of everything are high, and the war has caused a grave diminution of revenue from imports. Despite economies, \$3,000,000 in gold is required above the expenses last year, \$50,000,000 being necessary as interest on the country's vast debt; moreover, the selling prices of Argentina's products are likely to fall, and shipping remains scarce. At present maize is salable only as fuel. Additional taxation of some kind, therefore, seems unavoidable.

In the Senate on November 21 Senator Lewis introduced a resolution that it is the sense of the Senate that the policy of the United States Government for the future should be that of government ownership of interstate railroads, telegraphs, telephones, and all national lines of communication; that the Government should possess all natural agencies for the production of fuel (firewood apparently excepted); and shall construct and own ships and agencies of water transportation necessary for the merchant marine. This was followed by an extended debate.

On November 22 the Finance Committee reduced the Revenue bill by a further cut amounting to about \$500,000,000. Among the more important decisions were the elimination of the luxury schedule levying 20 per cent on costly articles of clothing and other merchandise and estimated to raise \$184,795,000; elimination of the House tax of 2 cents a gallon on gasoline, estimated to yield \$40,000,000; reduction from 10 to 5 per cent, or about \$200,000,000 in revenue, in rates on many articles classed as semi-luxuries, and a

**COMMANDING OUR M. P'S IN GERMANY**  
Colonel Arthur Woods, formerly Police Commissioner of New York City, and now on General Pershing's staff, has been appointed to take charge of the American and Allied military police in the territory that our armies are occupying. During his term as Police Commissioner of New York, Colonel Woods cleared the organization of graft and brought it to the highest point of efficiency. It was he who introduced the "kid 'em along" policy in handling crowds

reduction of about one-half in the House rates on tobacco, a cut of about \$54,000,000 in revenue.

A further reduction on the 23d removed the tax on bank checks, but all other stamp taxes were retained. Reductions in various taxes on brokers and on the license fees of proprietors of certain kinds of exhibitions and amusements, were also made.

The Democratic members of the Finance Committee voted unanimously on November 25 to frame a revenue measure for 1920, following the recent recommendation by the Secretary of the Treasury; adding the proviso that this bill shall be so drawn as not to bring in more than \$4,000,000,000 of revenue. With this movement the Republican members of the committee declined to have anything to do, and asserted that a revenue bill of that character will be fought by all the Republicans in the next session, on the ground

that the present Democratic majority has no right to tie the hands of a subsequent Congress.

**Our Policy for Foreign Trade** The mercantile community was much disturbed by a recent statement, emanating from a meeting in New York of bankers and others interested in commerce, that the Government had definitely adopted the policy of restricting the expansion of foreign trade by Americans, and to that end would continue the control of exports and imports—this to permit our European Allies to rehabilitate their commerce without encountering active American competition.

That any such settled policy existed was immediately denied by Secretary Redfield of the Department of Commerce. "We are going after foreign trade in the usual normal fashion," he declared in vigorous language, "but we will not play the hog. There is a difference between seeking foreign trade in a perfectly normal, natural way, and in playing the hog with both feet in the trough; there is a happy medium."

Mr. Redfield pointed out that at any rate an extraordinary "drive" to capture the markets that had belonged in a certain sense in the past to Great Britain, France, or others, would be impossible because the necessary ships for some time hence would be engaged in post-war duties, or in carrying raw materials to Europe and elsewhere. Beyond that, we owe consideration to the nations by whose sacrifices we have been protected, and thru whose needs we have changed from a debtor nation to a creditor of such magnitude as a few years ago would have been almost inconceivable. Secretary Redfield recalled a speech, made a few weeks ago, in which he told his hearers:

None of us like creditors who press for payment. That is just as true of nations as of men. What of a creditor who sought, while pressing for payment, to seek also the means wherewith others pay? I can

#### THE FOOD WE BRING TO STARVING EUROPE

These stores at one of the American Red Cross supply depots in Brest are brought by motor trucks from the ships and are distributed to refugees in France. The Red Cross is giving food and clothing also to the starving peoples of the other nations of Europe, including Germany. In July, August and September of 1918 our exported foodstuffs were approximately equal to an average year's total just before the war.

only suggest to you, gentlemen, the delicacy of the situation in which your country and mine now stands. I can only say to you that restraint and fine feeling and high idealism must prevail lest the flag be thought the flag of a hard creditor. You would not have it so.

These sentiments, the Secretary assured the public, animated the present Administration; and he added that no policy had been formulated, nor had any restriction been placed on efforts to increase foreign trade or acquire new markets for American goods.

**Navy Control of the Wireless** The country was somewhat startled by the bills introduced in both houses of Congress, with the President's approval, in the closing hours of the session, to put the Navy in permanent control of wireless telegraphy. The intent of these bills is the acquisition and operation by the Navy Department of all shore wireless stations in the United States used for commercial purposes, with authority to erect new stations and open new offices. Small private plants are not to be included; yet in their statement the Navy officials declare that "a complete monopoly is necessary." Rates are to be fixed in keeping with the service, and special arrangements made for press despatches overseas.

The argument for governmental operation of all high-power stations is that radio signals become international. "Only by the most careful regulation of radio traffic thru international agreement," say the sponsors of the movement, "can the maximum good be obtained, and only by each nation having the operation of radio stations under its direct control can international agreements be properly executed. They also assert that thus far none of the competing companies has made a commercial success; that success is possible only thru monopoly, and that the Government alone is able to acquire and manage a monopoly.

The radio companies protest against this conclusion, and are opposed to the plan, altho they had submitted cheerfully to control as a temporary war measure. Dissent is also expressed in many newspapers, which view the proposed action as another indication of the purpose of the Administration to obtain governmental ownership of all public utilities. Hearings on the bill by Congressional committees will begin on December 12.

**Mr. McAdoo's Retirement** Official announcement was made on November 22 of William G. McAdoo's resignation as Secretary of the Treasury and Director General of Railroads. The reason given by him is that his expenses during his residence in Washington have far exceeded his salary, and so depleted his fortune that he must replenish it. His salary as Secretary was only \$12,000 a year, and he received no compensation as Director General of Railroads (to be resigned on January 1), or as head of the Federal Reserve Board and of several other Federal institutions. The President accepted Mr. McAdoo's resignation in a

letter of warm and unstinted praise, a part of which reads:

I shall not allow our intimate personal relation to deprive me of the pleasure of saying that in my judgment the country has never had an abler, a more resourceful and yet prudent, a more uniformly efficient Secretary of the Treasury; and I say this remembering all the able, devoted, and distinguished men who preceded you. . . . The whole country admires, I am sure, as I do, the skill and executive capacity with which you have handled the great and complex problem of the unified administration of the railways under the stress of war uses, and will regret, as I do, to see you leave that post just as the crest of its difficulty is passed.

THE SERVICE FLAG FOR GENERAL PERSHING

In the window of his father-in-law, Senator Warren's home in Cheyenne, Wyoming, hangs this service star for the commander of the American armies in France. General Pershing's wife and three daughters were burned to death in the Presidio fire in August, 1915.

#### Return of the Railroads

The executive committee of the National Association of the Owners of Railroad Securities announced on November 22 that it had appointed Luther M. Walker general counsel in taking steps to conserve the interests of the holders of railway stocks and bonds in the matter of the return of the railroads to private control. He will be assisted by very eminent lawyers; and his own appointment is regarded as significant, as he has been one of Mr. McAdoo's most important assistants in the Railway Administration, and was formerly chief counsel for the National Industrial Traffic League. No declaration of policy has been made by the association except evidence of its general desire that the intention of Congress, as expressed in the Federal Control act, restore the roads to their owners within a reasonable time after the close of the war. The statement of the executive committee contains the following paragraph:

There is first to be decided the time of such return of the railroads. . . . Under the policy now being pursued charges incident to so-called unification are piling up against them, very difficult for them to repay. The policy in force is destructive of their individual credit. Furthermore, present conditions cannot continue without obliteration of railroads as individual going concerns. If they are to be returned as going concerns, as the Congress, by act,

intended and provided that they should be, this cannot be carried out under methods which are destructive of the very facilities which have been built up by the expenditure of millions of dollars for the promotion of enterprises and convenience of business and the public. The most potent factor in our reconstruction for upbuilding and extending our industrial and agricultural life will be the railroads loosened from their present entanglements.

**Food Prices Regulated** An effort to steady and regulate retail prices of food has been made by the Federal Food Board, which announced on November 24 that all retail stores must display "fair price" schedules that will be furnished by the board. The board not only promises to prosecute retailers, but it invites both the retailers and consumers to notify the board of any excessive charges that come to their attention.

Inspections by the board will be made to make sure that retailers are obeying the law properly, and punishment will follow failure to do so.

Henceforth retail dealers in food (except fresh fruits) must display a printed placard, provided by the Food Board, covering about twenty staple articles, giving the prices the Food Board allows the wholesaler to charge him, the percentage of profit on each article that the Food Board permits him to take and the price the consumer should be asked to pay. The Board believes that by this arrangement the consumer is not only protected against profiteering, but he is constantly and definitely advised of the fair maximum retail and wholesale price of the goods he buys. The schedule gives him the services of the expert market men on the Board.

The Department of Labor has found that the average family expenditure for food was 16 per cent more in September, 1918, than in September, 1917. The highest increase was in Baltimore, reaching more than 23 per cent, and the lowest in Salt Lake City.

#### The War Work Gift

The task of raising the united fund for the seven war work organizations was completed on November 25, when somewhat more than 203 million dollars had been collected. This is said to be the largest outright gift in the history of the world, and is also regarded as an impressive example of cooperation by religious sects of widely varying views. An interesting table showing the distribution of the sources of the fund has been compiled:

Excluding "war chest" districts, the Eastern Army Department, with \$74,600,709 to its credit, raised 110 per cent of its quota; the Central Department, with \$68,739,434, raised 118 per cent; Southeastern, \$9,459,056, or 139 per cent; Southern, \$9,356,580, or 182 per cent; Northeastern, \$19,081,612, or 129 per cent, and the Western, \$10,346,300, or 121 per cent.

Special contributions of particular interest: \$619,346 from men of the army and of the navy; \$1,000,000 from China, or four times what had been asked for; \$11,000 from Russia; \$360,000 from Japan; \$275,000 from Cuba, which was 275 per cent. of her allotment; \$114,000 from Mexico; and \$82,000 from Porto Rico.

# MARSHAL FERDINAND FOCH

BY MARCEL KNECHT

MEMBER OF THE EXECUTIVE COMMITTEE OF THE "ASSOCIATION GENERALE DES ALSACIENS-LORRAINS D'AMERIQUE"

THE Poilus called Joffre "our Joffre" or "the Grandfather"; our ablest staff officers, remembering their unequaled teacher of the French War School, often designated General Ferdinand Foch by the affectionate expression "le père Foch," which the simple privates, ignoring the slang of war colleges, took up immediately, giving its full meaning of chief of the great united French family to the word "father."

The General Foch was born in Tarbes, in that historic southwest which gave us Henry IV and Marshal Joffre, we Lorrainers are extremely proud to affirm with right that the young Basque, brought up in our beloved city of Metz, on the banks of picturesque Moselle sung by Ausone and Maurice Barrès, has always remained a Lorrainer, in heart, if not by birth.

He studied at the renowned Jesuit College of St. Clement-les-Metz, the remarkable educational records of which were already well known in France before 1870-71, and are comparable with those of similar American institutions, like Fordham University, Holy Cross College of Worcester, Boston College and Marquette University, Milwaukee.

An old schoolmate of General Foch, M. Loevenbruck, of Verdun, told me some months before the actual war how young Foch impressed his fellow students by his intelligence and his passion for learning. He also loved violent physical exercises and did not dislike hard fighting, boxing and wrestling. He was the great favorite of the professors and of the boys of St. Clement.

Metz evokes such noble souvenirs for a young Frenchman! It had always been the fortress of France until 1871: shadows of great dead certainly inspired the young student. Metz, Toul and Verdun have been sister towns, and each name meant sacrifices and heroism.

Metz and the Moselle had been generous toward their adopted son: has he not displayed the well known tenacity,

the subtle psychology, the unbreakable doggedness, the self-confidence, the marvelous patience which enable Lorraine, even annexed Lorraine, to remain the bulwark of French culture, somewhat an unexploded shell in the breast of Germany!

General Foch has the patriotism and the faith of Joan of Arc, of Drouot, and of General Pau; the idealism, creative power and wide imagination of Claude Lorrain, of Chopin, of Hugo, of Barrès. He possesses a magnetism, a broadmindedness which appealed to every officer and soldier, to every civilian of any country, who approached him. He is a magnificent type, not only of military leadership, but of humanity itself. His gray eyes have the energy of pure steel, and his eagle's nose and acute chin give to his ascetic face a singularly vigorous profile.

Tho having physically suffered in silence for many years, General Foch is sustained, as active and as strong as a cadet of St. Cyr, by his nerves, the high quality and efficiency of which are the secret of French genius.

General Foch ever has the rare ability of controlling his nerves, disciplined helpers of his brain.

When, in Nancy, about August, 1913, we heard that "Foch" had been chosen by the French Government to command the best troops of France, the 20th Army Corps, pride of our capital, everybody, our famous university, daughter of the University of French Strasbourg, our Chambers of Commerce and Industry, our splendid Iron Division of Nancy, Steel Division of Toul, Blue Cavalry Division of Lunéville, went wild with enthusiasm. As the 20th Corps always was the crack unit, the different War Ministers never ceased appointing the best military leaders at its head.

Marshal Canrobert, Generals Langlois, Michal, Pau, Bailloud, among others, have contributed to make the 20th Corps a fighting unit of a quality even

unsurpassed by the Prussian Guard. General H. Langlois, former commander of the 20th Corps, Senator of Nancy, member of the French Academy, for whom all Lorrainers had veneration and whose military leaders in the *Temps* were read all over the world, had appreciated Major Foch when he was himself Director of the War School.

General Langlois died just before the war, and his widow, a noble type of Frenchwoman, who died some months ago, had told me in 1916 these words I never forgot: "My husband admired F. Foch more than any other French commander and loved him as a son."

Foch was the spiritual son of Langlois, whose genial conceptions had been adapted by him to a war constantly modifying its conditions.

General Foch was one of our rare military leaders who realized that strategy and heroism must be permanently backed up by diplomatic action, unity of command, economic adjustments, and public opinion. General Foch has always been faithful to these principles inspired by his prodigious common sense and his quick imagination, subduing each other.

Before 1913, Foch, who had known Monsieur André Tardieu, the actual Secretary of Franco-American War Affairs, when professor of foreign politics at the War School, was an admirer of Tardieu's foreign daily leaders of the *Temps* and followed with keen interest the campaign of Tardieu for eventual Franco-British military co-operation.

Generals Langlois and de Castelnau had, between 1908 and 1913, visited the camp of Aldershot and followed the maneuvers of the British regular army and of the Territorial forces constituted by Minister Haldane. Foch, always curious and modern, immediately accepted the invitation of the British authorities to inspect their good but small army. In London, and in the military circles, General Foch at once produced a considerable impression, and soon entertained the most cordial relations with his British comrades, attracted by his magnetism.

In the spring of 1914, on the Place Stanislas, dear to every Nancy citizen, we saw one morning three British generals. These three generals were General French, now Viscount French, General Grierson, who died at the beginning of the war, and General Wilson, who is the actual chief of staff of Marshal Haig, after having been the British representative at the Interallied War Council.

General Foch, who had shown his visitors his 20th Corps in better shape than ever, and his artillery training camps, could more easily, in October, 1914, when promoted commander in chief of the armies of the northeast, be the authorized intermediary between

The fortress of Nancy, headquarters of General Foch during the early days of the war

French Pictorial Service

"Marshal Foch—hero of the Marne, executive brain of the battle of Ypres, and savior of Nancy and of Lorraine"

the French and the British high command.

General Foch's British friends remained faithful to their guest and comrade of peace times, and it is no wonder that, during the last four years, Great Britain has cherished the personality of Foch and has instantly accepted his supreme leadership.

General Foch commanded the 20th Corps only one year, but still developed its morale and its material. He obtained for his corps new batteries of 120 mm and 155, completing his 75 mm batteries.

He wished to know individually every officer and to give to each colonel a stronger sense of responsibility and of initiative.

The 20th Corps was already a perpetual fire of patriotism and represented an unusual fighting force: it became, under Foch, an intelligent war machine, as sensitive as a delicate clock and as accurate as an instrument of precision.

Nancy has always been, thruout history, the center of important events, of far-reaching consequences.

The victorious first battle of Nancy checked autocratic Charles of Burgundy and saved France. In 1892, the French President, Sadi Carnot, and Constantine, special envoy of Russia, celebrated in Nancy the Franco-Russian alliance, only signed to counteract German militarism, always increasing.

On that same occasion the Bohemian Sokols of Prague were cheered by the popular crowds of Lorraine and of Nancy.

In 1909, during the Nancy International Exhibition, for the first time in the history of Lorraine, Nancy, Lunéville, Toul frantically cheered the London County Council and the British

Parliamentary delegation, laying a wreath of flowers on the statue of Joan of Arc. The review of the 20th Corps by General Sir Alfred Turner was the first adhesion of Lorraine, formerly resentful of Joan of Arc's death, to the Entente Cordiale. German propaganda, ignored by many of us, had always used, especially in Lorraine, this particular weapon against the Franco-British friendship until 1909.

In the first months of 1914, several important events rendered Foch the prominent figure of Nancy, and, examined now from a distance, better illustrate the unknown great part played by Foch and by Nancy in the history of the war.

The Lorraine Academy, the members of which had met General Foch at Lyautey's castle in 1913, invited Stephane Lauzanne, chief editor of *Le Matin*, to address the Nancy population on the Franco-Russian military coöperation.

General Foch, who had accepted to attend the lecture, was unable to do so. At 4 p. m. he had suddenly received an urgent message announcing that General de Castelnau, chief of the French General Staff, had just arrived from Paris in order to visit the "Grand Couronné" of Nancy and its first entrenchments.

During the lecture and the next day Castelnau and Foch visited Amance, Brin, Nomeny, Dombasle, Le Rembetant, where, notwithstanding the hesitation of the General Staff, but with the unforgettable help of Foreign Minister Doumergue, of Lorrainers like Generals Pau and de Castelnau, Congressman Albert Lebrun, Commandant Driant, Louis Marin, Comte de Ludre, R. Mequillet, editor Leon Goulette, trenches and concrete platforms for guns of 120 and 155 were to be organized.

Foch, better than any other, understood the absurd conception of abandoning, in case of a German aggression, the rich and patriotic city of Nancy, the most important center of eastern France.

Tho the first works of the "Grand Couronné" only began in March, 1914, and were to be finished in autumn, 1915, a third of the complete plan, nearly executed, enabled France, in August, 1914, to stop partly the German invasion, to save Nancy and to help Joffre win the victory of the Marne by protecting his right.

After the meeting a banquet was offered to Lauzanne, and its president was General Foch, who, introducing the speaker, delivered a remarkable address on Russia's astounding opportunities and on the necessity of coöperating more intimately with that great Eastern nation. Foch was enthusiastically applauded by many generals, colonels, by the Alsatian patriot and writer, Dr. Bücher, who had specially come from Strasbourg to listen to the two speakers. General Foch astonished his audience when explaining his broad conceptions of foreign politics and of general economic problems; every one understood why Nancy could well be proud of having such a leader.

Some months later, even before any declaration of war, French Lorraine was invaded everywhere by Prussian and Bavarian troops from Metz and Dieuze.

That meant the departure of the regiments of the Iron and Steel Divisions, leaving for the front, singing the "Marseillaise," the "Marche Lorraine," and going religiously to the great sacrifice.

At the headquarters of General Foch, still remaining at the Governor's Palace, during [Continued on page 228]

Some of England's youth whose remarkable prowess and courage pulled her up from the third to the first place in aviation

## BRITANNIA RULES THE AIR

Mr. Driggs, who is himself an aviator and an authority on aerial warfare, is writing regularly for *The Independent* on aviation in England and at the front

BY LAURENCE LA TOURETTE DRIGGS

of the Englishman to speak of his talents and

**A**FTER four years of war England suffers most particularly in the natural decimation of that gallant schoolboy youth which gaily volunteered as pioneers in the new science of war aviation. Almost self-taught, mounted upon crude machines that flew but did not maneuver, imperfectly armed and permitted to go aloft on dangerous quests with solely their wits to guide them, those brave boys, could they now return, would be amazed to find the high military standard which aviation in England has attained.

England in those early days of aviation was not in truth far behind other belligerent nations in matters of equipment and training. Then the science itself was new. Pioneers in every nation were compelled to blaze the trail. Thru their experience only has aviation been so wonderfully developed.

Germany, concededly, led the world in aeroplane motors if not in aeroplane design. France, with intrepid ideas of her own, had conquered the air in ways of her own, and thru the individual heroism of her early airmen had established records beyond the reach of the less imaginative Hun. England stood third at the beginning of the war. With a handful of hopeful amateurs who vainly urged official recognition of the importance of aircraft in warfare, British aviation then occupied a position but one grade higher than existed in the United States, where man first flew.

England stood third!

In the States it is our impression that Great Britain still occupies third position in the air. The Huns have

flooded our press with exciting stories of the prowess of their von Richthofens, their Immelmans and Boelkes. We Americans love a hero. Whether it be a racehorse, a prizefighter, a baseball star or a movie actor, the personal characteristics of the hero become intimately known to the public and his portrait adorns every household in the land. Which is perhaps an excellent fashion and one which tends to awaken emulation and rivalry in others.

Hence, when Guynemer of France shot down four enemy aeroplanes on May 25, 1917, at that time a world record, all America studied his youthful features with interest and affection. When von Richthofen was killed in combat within the British lines on April 19, 1918, every newspaper in our land published the photograph of the great air fighter who had conquered eighty enemy aeroplanes in combat. But where were the British airmen, and what were they doing all this time?

When Bishop returned home to Canada on leave in the fall of 1917 a reporter at the wharf learned that he had shot down forty-six Huns while in the British Air Service. And the British had never mentioned it! Most extraordinary national modesty, this! Wonder if the British have any other stout fellows like Bishop in aviation!

A study of the official awards of military decorations for exceptional valor in air revealed the fact that a hundred or more British pilots had been victorious over their handful of Huns and in the vivid parlance of the day had become "Aces." Collecting these names and scores, I published the list in conjunction with the lists of French and German "Accs," and undeniably Britain stood third. Knowing the reluctance

conscious of the British scorn of advertising, I took pains to express my belief that the true British "score" was undoubtedly in excess of the figures published. But even in my own mind Great Britain stood third.

Now on the spot amid the fighting squadrons of the British aviators I am making an amazing discovery. Raymond Collishaw, a Canadian, whose name has probably never been mentioned in America, has brought down more aeroplanes in combat than von Richthofen claimed. An Irishman named Edward Mannock has a total of seventy-one enemy aeroplanes shot down, and tho he is one of the best loved officers in the British service, his name and marvelous exploits have never penetrated the veil of official modesty.

Colonel William A. Bishop, having amassed seventy-two victories, the last five of which he added to his score the morning after he had received orders to return to London, reluctantly came home to find he had been given charge of organizing the all-Canadian flying units. His office is a rendezvous for all airmen home on leave, where they smoke his cigarets and call him "Bill" and relate to him the latest doings of his fellows at the front.

At one of these gatherings was illustrated the eternal joyousness of the spirit of aviation. In an automobile accident at the front two pilots of a fighting squadron were killed in the smash. The "Ace" who was telling the story had sat beside the chauffeur and held on his lap a fellow pilot who was then flying at the front with a wooden leg.

"I came to in the hospital," continued the narrator, "and there beside me lay

old Scotty, cursing mad because he had broken his old wooden leg. Otherwise he didn't have a scratch."

And the group howled with laughter at old Scotty's plight without a thought of the two lost friends who had in the same accident "gone West."

James B. McCudden, an Englishman, and like Bishop the holder of a Victoria Cross, was killed by a forced landing amid trees last July. He had destroyed 57 aeroplanes and one drachen of the enemy.

McLaren and McElroy, both Canadians, are accredited with 48 and 46, respectively. Robert A. Little, a New Zealander, comes between them with a score of 47. Albert Ball, another Englishman and V. C. man, shot down 43 enemy aircraft before he was killed in combat on May 9, 1918.

Henry W. Wollett and Philip F. Fullard, both of England, have also 43 each. "Taffy" Jones, a merry little Welshman who stutters in his speech but has eyes that pick up a Hun machine several miles beyond the vision of any other pilot in his aerodrome, follows with the present score of 40. Captain A. W. B. Proctor of Canada and Major Roderic B. Dallas of New Zealand each have 39 Hun machines to their credit.

Captain W. G. Claxton, a Canadian, has 37. Captain F. R. McCall, also a Canadian and from the same squadron, has 34, which is the same number credited to Major Frank G. Quigley, an Englishman. Major Albert D. Carter and Captain Andrew E. McKeever, both Canadians, have 31 victories apiece.

Captain Cedric E. Howell and Captain M. B. Frew won 30 victories each while in the same squadron fighting in Italy. Major Andrews and Captain James Slater are also accredited with 30 machines each.

Nineteen other British pilots have accounted for upwards of 20 each. And some forty younger members of the Royal Air Force, whose names I have, are well over 10 victories each and are rapidly accumulating more.

Elliott Springs of South Carolina, who was elected by Bishop with two other Americans to form members of his new squadron last spring, now has a squadron of his own and on August 1st last had destroyed his fifteenth Hun. Reed Landis, son of Judge Landis of Chicago, has also shot down 15 German aeroplanes since his enlistment with the British. Several other Americans with lesser scores are doing equally brilliant work with the R. A. F.

It is needless to compare the total scores of the British airmen as a whole with the victories claimed by the Huns. Suffice it to say that up to October 1, 1918, the twenty leading British scores as above listed exceed by over 100 the total claimed by the twenty best air fighters of Hunland. More significant still, only five of these twenty Huns remain while over one half of the British star twenty still survive. And the French and Italian airmen are still to be counted.

This revelation of British proficiency in the air is in truth startling. It has not been given to the world for reasons that to an Englishman seem ample but to an American seem self-depreciating. The authorities most justly maintain that Corporal Tom Snooks in the trenches is doing his whole duty as devotedly as is the most brilliant fighting "Ace."

Even in the air service the bombing pilot and the spotter of artillery fire expose themselves to the same dangers that surround the fighting pilot, but they are deprived of the opportunities of shooting down number-

less enemy aeroplanes because that is not their function. It is therefore unjust to throw the limelight of publicity upon the fighting pilot while no personal mention is made of his equally heroic brother.

All of which is quite true. But human desires cannot be regulated by official dampers. In the face of enemy propaganda which advertises so extensively the prowess of the Hun pilot and the danger of antagonizing him, it is a distinct pleasure to know that the British pilots have antagonized him and overthrown him.

A more important lesson which these facts may teach is the conclusion in America that the English school of air training must of necessity be extraordinarily good and worthy of imitation if the young graduates therefrom can pull England from Third Place to First Place in the Air. Remembering always that the cream of England's schoolboys has suffered by these four years of war, and that America's eager youth are deserving of the very best training that it is possible to secure, what more conclusive evidence can be produced in recommendation of British air training than the success it has attained?

The lure of aviation attracts the chivalrous and pride of our youth. This has been true with all the nations at war.

Almost a common denominator of human characteristics runs thru the great fighting aces that I have known, be they British, French or American. And from the testimony of some of our pilots who have become acquainted with several of the Hun airmen of note, admirable qualities have not been found wanting even in them.

Fearlessness, gaiety, cleverness, courteousness, thoughtfulness and a debonair and polished wit is found in each of them. Modesty of the truest sort crowns the virtues of these gallant boys. Never did the yellow streak appear.

And this is the class in England that leaped forward first from the classrooms of their aristocratic schools to enlist in aviation. Their sacrifice taught their nation a terrible lesson. From that moment began the unswerving plan to give this youth its due in both machines and training. That plan has now resulted in the finest schooling for air pilots to be found anywhere in the world.

It will be noticed that Canada claims a very large proportion of the leading Aces of Great Britain. Ten of the twenty hail from Canada. In the entire air force of Great Britain some 60 per cent are said to be Canadians.

This local superiority might be explained by the fact that they breathe the same air as Americans, or more logically from the fact that aviation was almost unknown in Canada at the beginning of the war and that these enlistments filled the places of English boys who had first chosen aviation. The Royal Air Force is, moreover, ten times its 1915 strength.

(C) G. V. Buck, from Underwood & Underwood

William Avery Bishop, of Toronto, Canada, lieutenant colonel in the British army, who downed seventy-two enemy planes, and has received the Victoria Cross and the Cross of the Legion of Honor, first class. His active fighting days ended when he was appointed to the British Air Board

# FOUR ENGLISH HOSPITALS

BY HAMILTON HOLT

MY first realization of what

Thomas Jefferson meant when he called war "the greatest scourge of mankind" came to me when I visited four of England's greatest hospitals for the wounded. These hospitals were Sidcup, where living tissue is grafted on men's faces to make new noses, ears and mouths; Wandsworth, where facial masks are

designed to cover eyeless sockets and shot-away cheeks and jaws; Roehampton, where new arms and legs are manufactured; and St. Dunstan's, where the blind are cared for and taught that even the most terribly handicapped life is worth living. These hospitals show England at her best and each marks a marvelous advance in the science and art of healing.

Sidcup Hospital lies in the open country a few minutes' run by train beyond the suburbs of London. It was originally an old medieval brick manor house situated in a park filled with those ancient gnarled oak trees so familiar in Victorian etchings. It has now been given permanently as a hospital for those poor fellows whose faces have been mutilated beyond recognition by the exponents of "Kultur." Here they are taken in hand and truly marvelous results have been obtained. The face is the mirror of the mind, the medium thru which the soul finds expression, but the Germans have transformed the most attractive features into something diabolical. An eye, maybe, is missing and in its place is seen a hideous socket with a bloodshot rim. Mobile lips on which smiles were wont to play are now all askew. The mouth

(C) Ernest L. Smerdon

"At St. Dunstan's the blind are taught crafts so that they need not be dependent"

may be nothing but a formless cavity without a tooth, or more frightful yet, a jagged slit stretching from chin to forehead. Such facial wounds are the most horrible outcome of modern warfare. They are repulsive to every one who sees them, and to those who have to bear such disfigurements they must be appalling.

When Dr. Carrel made his famous discovery that cells taken from the human body are capable under certain conditions of reproducing themselves indefinitely, he perhaps did not fully realize the practical application of his discovery. It remained for a group of young surgeons in London to apply his principles to the human wreckage of the war and thus save from suicide thousands of men who would have preferred death to returning as objects of loathing to their families and friends.

The surgeon in chief of the hospital showed us about. But with the usual British modesty, he made me promise I would not mention his name in connection with anything I might write about his institution. He first took us into the room in which were hung on the four walls plaster casts of men's faces, before and after treatment. He explained to us the surgical process

usually employed in restoring facial mutilations. Suppose a man has had his face so crushed that he has only a hole where his nose ought to be. The problem is to create a new living nose. The doctors will first procure an old picture to learn how the patient used to look. This will be the guide toward which all attempts at restoration will be made. The patient will then be put un-

der ether and a piece of his rib or shin bone will be taken and inserted in a slit in his forehead, which will then be sewn up. After the skin has grown over the bone and the bone has attached itself to the ligaments, another operation is performed by which the bone is turned down on its lower axis and brought down to serve as the basis of the nose. Slits are cut into the skin on the cheeks on either side of the nose and on the upper lip. The flaps of skin thus released are brought over the nose and grafted on the gristle. After this is healed the flesh is massaged and trimmed until finally the man has a Greek or Roman nose perhaps better than his original organ.

We next made a tour of inspection of the wards, where we saw the men in all the various stages of treatment. The faces of some were almost too revolting to look at. Others were just on the point of being sent home cured, with faces almost as good as new. We talked to many of the men and tho they said the treatment seemed unending and was very painful, yet they were all most happy with the results. I was told that surgeons from all the Allied nations have made pilgrimages to this hospital to learn the newest methods

A general view of Wandsworth Hospital, once a famous schoolhouse, where now artificial cheeks and jaws are modeled

Samples of the marvelous work of creating new faces being accomplished by British surgeons in the Sidcup Hospital

of grafting live flesh on old foundations, and no doubt England's great pioneer work in this branch of surgery will soon be available for use thruout the world.

After tea with the staff at the old manor house, a "Waac," who turned out to be the wife of the hospital's chief anesthetician, drove us to the train in a high-powered car. When we landed at the Charing Cross station in London half an hour later, a hospital train was just pulling in, bringing the English wounded direct from the Flanders front, where the great German drive was still at its fiercest. There must have been fifty khaki colored Red Cross automobiles drawn up under the great dome of the station waiting for the boys who had been trying to stem the German tide. A cordon of policemen was holding the crowd back. The driveway from the entrance of the station to the main street was flanked by two lines of spectators waiting to see the wounded carried out. It was about six in the evening and the crowd was composed mostly of shopgirls and widows in mourning on their way home after the day's work. Two slatternly women wearing men's straw hats were walking up and down selling crocuses to the throng, and almost every one bought some. I noticed a couple of bright eyed little wizened old ladies, each with a handful of cigarets, and a neighbor told me these same women met all the incoming trains of wounded, for the thing a wounded soldier loves next to a word from home is a cigaret.

In a few minutes the stretcher bearers had filled the first ambulance and it started down the lane of drab women. First a murmur and then a sigh rose from the spectators. As the car passed along the crowd rushed out and threw crocuses and cigarets in behind.

Each ambulance had four cots in it, in each of which lay a wounded soldier, while in the aisle between the cots crouched a trained nurse. The eyes of most of the crowd glistened and many were weeping, and I could hear such murmurs as "Poor boys," "The brave fellows," etc., as they passed along. But if the bystanders were deeply moved, not so the boys. Most of them waved their hands or smiled as the flowers rained upon them, tho I noticed two or three whose white lips quavered tho their eyes still faintly smiled their gratitude for being home in Blighty again. The crowd stayed until every one of the fifty ambulances had passed, each one pelted with flowers. Then it quietly dispersed and the smoky sta-

tion went on again about its normal business.

The second hospital we visited was the General Hospital at Wandsworth, where the new art of plastic surgery is practised. Most of the patients were officers. The genial colonel in charge took us about. Before the war the hospital was a famous old schoolhouse, but it now has been converted into one of England's greatest medical institutions. The colonel told me that when the war began he called a large number of the leading English painters and sculptors and said to them in effect: "Now, you painters, quit painting Lady Guineveres and peaceful vine-clad, thatched cottages, and you sculptors, stop fashioning marble busts of Venus and Apollo; but all of you, while the war lasts, devote your talents to remodeling your fellow countrymen." So when a wounded soldier was received at the hospital with an eye or part of a cheek gone, the sculptor would take a plaster cast of the mutilated side of the face and then with the aid of a pre-war photograph and casts and measurements of the uninjured side, would fashion a new model to fit the hollow, and when his job was done the painter would come and paint the flesh tints upon it. I have seen men with artificial jaws that ten feet away could not be distinguished from real jaws. I have seen a soldier with an artificial eye and cheek that he could put on when walking down the street and take out when he got home. No one would recognize it as false unless his attention was called to it.

Francis Derwent Wood was the artist who has been chiefly responsible for making these plaster casts. Before the war he was a painter of the Royal Academy, where he had had many pictures on exhibition. In 1915 he enlisted as a private in the British army, but was detailed to this hospital, where he speedily received recognition and was eventually put in a splint department where he developed the art of plastic surgery to its present point of perfection. We visited his office, which was a molder's workshop, studio and consulting room in one. On the walls were to be seen a strange collection of facial masks and records in plaster and photography. I herewith reproduce some of

the pictures which he gave me. I noticed artificial ears as flexible looking and pink as tho they were made of flesh and blood, noses in part or in their entirety with the cheeks added, and eyes that looked up over the fake spectacles as naturally as tho they were real organs of sight.

The process of making the artificial masks is roughly as follows: First, the face is smeared with oil and vaseline and the wound cavity is filled up with dressing and cotton wool. This preparation is then covered over with gold beater's skin and the nostrils filled with cotton wool, in order that the plaster will not stick to the face. The plastic surgeon is now ready to begin his work. His one desire is to restore the features and make them natural. He first puts the plaster on the face. After the mold has dried it is removed and placed on one side to be thoroly hardened before the next step, with French chalk on its inner surface.

Then Captain Wood reconstructs the destroyed features from the model taken from the negative of this cast. Everything depends finally on the efficiency of the various arrangements to the comfort of the patient. After the mask is completed a thin covering of cream colored spirit-enamel is put on as the best basis for the painting. The eyebrows are now painted with a brush, but the eyelashes are made with a thin metallic foil and cut fine with scissors. The restoration of such faces

had been made a matter of special study for three years in England, and is a triumph of surgery in skilful and experienced hands. So fine indeed is the work that the most frightful faces can be made to look natural except when one is very close to them.

I was agreeably pleased to see how cheerful, comfortable and homelike the ward rooms were for the convalescent officers. While I do not especially admire the English nurse's costume with its enormous starched white muslin headdress, everything else seemed more attractive than anything I saw subsequently in the French or American hospitals. I was especially impressed with the red curtains at the windows and the red blankets on the beds in all the ward rooms and the skyblue convalescent uniforms. [Continued on page 334]

"High jinks in Ward E," from a magazine edited by the wounded

# WHAT THE WAR MEANT TO THE U-BOAT

BY HERMAN WHITAKER

OUT in the harbor a thirty-vessel convoy was nosing up to its anchors. The hiss of steam, rattle of the winches, carried across the water and up the hill to where, from his office windows, the Base Admiral watched the departure. His gaze centered on one ship, a fine steamer which, with her cargo of twelve thousand tons of meat, was worth fully three million dollars. Her potential values, however, far exceeded that figure, for the meat stood for human flesh; the flesh of women and children in France and England; for the thews and sinews of millions of soldiers who must be well fed if the world was to escape the German yoke.

The ship was commanded by a Scotch skipper, an admirable character, upright, courageous, self-reliant, the finest of seamen but, unfortunately, hard in the mouth. Before the convoy system was established he had voyaged a score of times thru the submarine zone, winning his way to safety by seamanship and daring. A torpedo had once shaved his bows. Another had almost clipt off his stern. He had fought half a dozen artillery battles and gotten away with it. All of which had raised his opinion of himself and his ship fairly close to Omnipotence. He hated the naval discipline of convoys as much as their slow speed and had bolted them twice. The fact was in the Base Admiral's mind when he turned to his chief of staff.

"McGregor, down there, has bolted twice. I have advised his owners to replace him, but they won't. Sooner or later if he isn't stopped, the U-boats will get him. Radio N—— to watch him closely."

The order was duly noted by the senior commander of the destroyer group that escorted the convoy to sea, and when his chief executive reported a few hours later that McGregor was edging out of his column, the destroyer went after him like a dog in chase of a bolting sheep.

"Who do you think you are, anyway?" The senior commander "bawled him out" thru a megaphone. "The Lord High Admiral, heigh? Try that again and I'll put an officer on your bridge and recommend that your papers be canceled."

"That ought to hold him," he remarked to his chief executive as McGregor came back to his line. "But I'll bet you the old chap is raving. His crew will need to step lively during the next few hours."

And raving the McGregor surely was. If printed here his remarks, as afterward reported by his crew, would burn a hole in the page. He, a master of twenty years standing, to be ordered about by a damned Yank! He, that had outfought, outwitted, outrun more U-boats than the entire American flotilla had seen in the course of its operations! He, with a sixteen knot ship to be held down to an eight knot crawl! Put an officer on his bridge, would they!

*Mr. Whitaker, who cruised with our destroyer flotilla in the submarine zone, points out in the following article the great disadvantages under which a U-boat fights. In previous articles in The Independent Mr. Whitaker has discussed other phases of the war at sea, and fighting on land and in the air*

WELL IN HAND!

*This cartoon, which appeared in the "Passing Show" of London, is a tribute to Admiral Beatty, First Lord of the British Admiralty, for his success in handling the submarine situation and the triumph of the British navy in the underseas war*

Cancel his papers, hey? And so forth with profuse marginal notes and profane trimmings.

If a plausible excuse in the shape of a fog that fell like a thick gray blanket over the convoy had not been furnished, these fulminations, no doubt, would presently have subsided. He would hardly have dared violate such specific orders. But when the fog lifted toward evening the convoy was scattered over the seas to the horizon and came scuttering back like frightened chickens in response to the destroyers' radio cluckings—all but McGregor, who was out of sight. Next news of him came in an agonized call from a point just over the horizon.

"I'm torpedoed! Sinking! Submarine shelling boats! Come at once!"

Too late! On the wide and lonely ocean that had just engulfed that fine ship with her sorely needed food, the potential flesh of thousands, they found two shell-torn boats full of wounded and dying men.

In the crestfallen, troubled man who sat in their midst it were difficult to recognize the old hard mouth who had raved on his bridge a few hours before. He was repentant, of course, but the tears that squeezed out of his hard eyes and washed the iron furrows of his face could not restore that fine ship with her sorely needed cargo, nor heal the wounds of his crew. From one point of view his conduct was criminal. I have heard men call for him to be hanged. Yet it was natural; inspired by the same spirit that has kept a thousand

of his kind voyaging those dangerous seas; the same spirit that had brought him and many another like him, off best in U-boat duels; the same spirit that animated that fine old skipper of the North Sea, who, with both legs shot off and his vessel sinking, ordered his crew to throw him and the code books into the sea together. So let us allow his repentance and permit the incident, unfortunately one of many, to serve to illustrate at once the merits and faults of the convoy system.

A certain number of destroyers to a certain number of merchant vessels was required for perfect safety; and that convoys of thirty vessels with half that number of destroyers were practically safe was proved at least to my satisfaction, during a cruise I made when a number of our vessels escorted a total of sixty vessels a distance of 1800 miles in ten days thru waters infested with submarines. To the right and left, ahead and astern, U-boats were constantly being reported. Often we crost their courses. No doubt they had us under observation most of the time. But, mark this! we sank the only one that had the nerve to attack us and sent its crew of four officers and thirty-six men back to our base. Another significant fact—while we passed in safety, unescorted vessels were being sunk all around us. Five were torpedoed, indeed, in less than four hours; three of them went to the bottom. As a matter of fact, the bulk of the U-boat bag was taken from unescorted ships.

If this be true, the question naturally arises—why were merchant ships ever allowed to go out alone? The answer is simple—there were not destroyers enough to go around. So the American and British naval authorities were doing the best they could. By the use of small patrols of boats, "blimps" and hydroplanes, they managed to keep large areas of home waters safe for local traffic and to keep certain sea lanes open thru which fast merchant vessels could escape to the high seas beyond the danger zone. Once in a while the U-boats broke into these protected areas, however, tho they found it a costly business that usually ended in their extermination.

Another reason why vessels were permitted to go out alone touches the convoy system's chief disadvantage—it reduced tonnage, or carrying capacity, first by delays waiting for escorts; second by limiting the speed of fast ships. This meant that less material could be moved under the convoy system than by free ships.

The limitations and advantages of convoys being thus understood, let us consider those of the U-boats. Instead of being as free as the fish, they were compelled to operate within quite narrow lines while exposed to many risks that do not menace surface craft. Think of the uncharted rocks, tips of underseas mountains, that must project up into the deep [Continued on page 346]

## WARTIME LEADERS GOING BACK TO PRIVATE BUSINESS

*With the pressure of war needs past many of the big men of the country who left their own affairs to serve the Government are planning to return to private business. The Director of Air Service, John D. Ryan (left), who is also Assistant Secretary of War, resigned last week. Frank P. Walsh (right), joint chairman with William H. Taft of the War Labor Board, has offered his resignation to return to his law practise*

## SECRETARY McADOO RESIGNS NINE JOBS

*To recoup his health and personal finances William G. McAdoo resigns as: Secretary of the Treasury, Director General of Railroads, Member of Federal Reserve Board, Member of Farm Loan Board, Director of International High Commission, Head of War Risk Insurance Bureau, Head of Soldiers' and Sailors' Insurance Bureau, Member of War Cabinet, Head of the Capital Issues Committee*

## HAIL TO THE ALLIES!

The artists' tribute to the warrior is being expressed by an official War Salon held at the American Art Galleries in New York from December 9 to December 24, at which will be exhibited several hundred representative drawings, paintings, lithographs, etchings and pieces of sculpture made in honor of the armies that fought so gallantly in France. On this page we are reproducing half a dozen of the best works commemorating the bravery and fortitude of the French, British, Belgian, Italian and American troops. Moral as well as physical courage, kindness and protection are among the themes these artists have chosen to honor those who have died or who the living have given the best of their lives

### BEFORE THE RAMPARTS OF VERDUN

A French artist made this drawing of the gallant stand his fellow countrymen made to hold the fortress of Verdun against the onslaughts of an enemy numerically superior. He has portrayed unforgettably the meaning of the "supreme sacrifice"

### OUR SOLDIERS: THEY HOLD WELL

Another tribute to the poilus' fighting courage under heavy odds. At the left is a stretch of British battle-front in Flanders where the marshy ground pitted with shell holes full of water is indeed a picture of horrible desolation

### THE BLIND CHAPLAIN AND PARALYZED SOLDIER

"I SHALL TELL NOTHING"

## MUSTERING OUT THE CAMPS

The demobilization orders struck Camp Dix, New Jersey, among the first; 23,600 soldiers there were ordered discharged, leaving only four battalions of the 153d Depot Brigade besides the permanent camp organization

Central News

### THE CHIEF OF STAFF, CAMP COMMANDANT AND SECRETARY OF WAR

The demobilization at Camp Dix was honored by a preliminary review of the troops by General Peyton C. March, and Secretary of War Baker. General Hugh S. Scott, who is standing between the other two men in this photograph, was the former Chief of Staff

### GET YOUR DISCHARGE PAPERS

Each soldier gets his certificate of honorable discharge before he is actually mustered out

Central News

### "THE SOLDIERS' FAREWELL"

Papers in hand these men are ready to leave camp. But one gathers from the photograph that none is glad to say good-by

© Underwood & Underwood

### WHEN IT'S OVER, OVER THERE

These men were waiting their orders to go overseas when the news of the signing of the armistice changed their plans by bringing orders of discharge instead of embarkation. Now they're all packed up, mascot included, and saying a fond farewell

# CONFESSIONS OF A MOTION PICTURE PRESS AGENT

## II. THE BIG FILM CORPORATION

*This is the second of a series of three articles dealing with the inner side of the motion picture industry, by the author of "A Theatrical Press Agent's Confession and Apology." The first of these articles was published in The Independent of August 24*

Alas! too true. In my hurry of leaving for the Western Eldorado, and eagerness to please the good-natured broker, I had completely forgotten about the wily boss' deep-laid scheme of creating a demand for our pieces of engraved paper by warning the public away from them.

"A daily journal," continued the president, "saw your press notice and my ad, and started an investigation. The publisher called here with what purported to be my previous business record, including an outrageous allegation that I had wrecked a life insurance company down South, and threatened an exposé of Montezuma methods. It took the best efforts of my lawyer and an unusually fat space-contract to call him off. I see," added the president disapprovingly, "that I must put a publicity manager over your department to guard against such mistakes in future."

But nevertheless and despite my ill-timed praise, Montezuma stock continued to sell like lots in an Oklahoma land boom, and we all buckled down to making ready for our New York opening under the supervision of Brutus's publicity manager, the latter being known as the Healer from his propensity for mental science. The president had taken a Broadway theater under a yearly rental of \$85,000. The problem-

*Courtesy Famous Players-Lasky Corporation*

*"Elaborately built structures were fired and shipping was blown up to provide a 200-foot 'flash' in a 5000 foot picture"*

in-council was how to start operations. Finally the suggestion of Catiline, a clever ad writer who had the executive's ear, was adopted.

"The way to do it," he urged, "is to sell your best movie seats at three dollars. Fix up the theater like an aristocratic villa, put in loges and tea rooms for the Fifth Avenue set, station beautiful girls as ushers, and add philharmonic concerts led by a great conductor. Create the atmosphere, my dear sir, create the atmosphere. Fifth Avenue will lead, and the hoi-polloi will follow!"

This advice suited the president exactly. He had mixt much with the rich in his stock operations, and he had visions of a picture palace more "exclusive" than any legitimate theater, with himself as the swallow-tailed host welcoming the votaries of fashion and chuckling over the vast crowds of the trailing populace. Much cash was spent in altering the theater, invitations were issued to the Four Hundred, and the box office was opened to the vulgar. The newspapers grasped at the novelty and printed our announcements at length. We were all very hopeful.

On the afternoon of the opening I had a presentiment that things were not right, which strengthened to a certainty when I looked at the full racks of non-complimentary seats and learned that the entire week's advance sales amounted to only \$96.75! As night drew on, none of fashion's votaries loomed up in the offing. [Continued on page 344]

*Courtesy Famous Players-Lasky Corporation*

*"Grandiose ideas of production ruled everybody." This scene is from a later picture, and shows fighting on the "Pyramid Temple"*

I was now to be initiated into the workings of a great film concern, the kind which greets you with its offerings on fixed days of each week at your favorite picture theater, and causes you to wonder at the nature of the personalities behind it. Much of what I shall describe is not typical, but the modes of distribution and the relations of stars to the parent company have a general application.

The Montezuma Film Corporation, having been founded on the fame of its producing directors, capitalized that fame by selling stock. This new enterprise had hired me as press agent and sent me at my request on a trip to the West Coast studios before the opening of the New York press campaign. The president of the company (hereinafter known as Brutus) was about the busiest man alive; as a marshal of financial phalanxes and battalions he had no superior. On returning to New York I knew from his expression of countenance that my Los Angeles flying trip had been a strategic error.

"You got us into a peck of trouble by your hasty going away," remarked Brutus.

"How is that?"

"You gave my broker an article, which he had printed in the Wall Street papers, to the effect that Montezuma Film was a fine 'buy' and we heartily recommended it to investors. Didn't you remember I had just inserted a page advertisement in the dailies advising the investing public NOT to buy our stock?"

*Courtesy Famous Players-Lasky Corporation*

*Restaurants were built inside of studios and cabaret entertainments of enormous cost were given to the "patrons," who ate real food and drank vintage wines*

# The Countryside

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

Of the fifty million tons of coal that must be saved in the United States, the home-fires have assumed the responsibility of conserving fifteen million tons.

Efficiency and intelligence in lighting our homes is one method of conserving fuel, because artificial gas is manufactured from coal and oil, and electric current is generated also by coal except in those instances when hydraulic power is used. Kerosene can not be offered as a substitute, because more is needed than we are producing. It is the source of heat for our boys in hospitals and homes over there where the price of coal is prohibitive. We must depend, therefore, on gas and electricity, but we must use them conservatively.

Artificial light may be saved by a longer use of daylight; by never leaving lights burning in an unoccupied room; by the installation of electric bulbs which are of the correct power for the use they are to perform; by the removal of unnecessary lights; by the elimination of the carbon-filament electric lamp and its substitution by the tungsten; by the elimination of the open flame gas burner and its substitution by the incandescent mantle; by the economical management of every bulb or burner; by shades of the right texture; by light-diffusing color-schemes in our rooms, and by the gathering together of the family around a few sources of illumination.

Beyond our windows, day lingers longer than we give it entrance into our homes. By raising our shades to the very tops of the sashes and drawing chairs and tables into the windows, at least fifteen minutes more of brightness from outside may serve us. Windows are sometimes made sources of shadow by light-absorbing curtains of rich and heavy texture. During the present period of war necessity these should be removed.

To have just the right amount of light in relation to the space to be illumined and the work to be done, is what conservation asks of us. To tax our eyesight or shroud our homes in gloom would be to throw away health and usefulness.

Conservation asks only that waste shall cease. Particularly, it asks that we shall turn out lights when we leave a room unoccupied. The use of switches in controlling

*"In a dining room where conversation precludes close occupation general illumination from the ceiling is preferable and may be constructed on the indirect principle"*

## OH, SAY, CAN YOU SEE?

Prepared for The Independent  
by the United States Fuel Administration

electric lights makes thrift easy by extinguishing many lamps thru the pressure of one button. It has its dangers, also, for it may light more lamps than are required. To obviate this extravagance, unnecessary lights should be turned off at the brackets so as not to be controlled by the switch, or they may be removed entirely.

The chain-pull by-pass should be put on all gas fixtures and brackets, reducing to a minimum the trouble of lighting a burner while groping in a dark room.

For an occupation on which we must concentrate our sight after daylight has ended, we need a fifty-watt lamp or two twenty-five-watt lamps placed on a table, or two incandescent gas mantles also arranged in a drop-light. In a dining room or any apartment where conversation precludes close occupation, a general illumination from the ceiling is preferable. This may be constructed on the indirect principle, the lamps shedding their brightness on wall and ceiling which diffuse it thru the room, or on the semi-indirect principle according to which a certain portion of the light descends directly from the source to the objects below. It is impossible to suggest arbitrarily the number and power of lights needed for general illumination, for this is contingent upon the size, shape and decorations of the apartment, but one efficient light is more economical than two or more inefficient ones, and frequently it will be found that one-third of a cluster can be removed if

the one or two bulbs or mantles left are of good candle power.

The carbon-filament bulb is wasteful. The tungsten lamp uses about half the fuel to supply twice the illumination, and reduces the cost of current by one-half. All conservationists will install tungstens at once thruout their homes. Similarly, the incandescent gas mantle should replace the open flame gas burner. Five incandescent mantles burned in the place of flat-flame burners during four hours a day will save in a year one ton of coal and at the same time will give us at half the cost twice the amount of light which flat-flame burners give.

The damaged or smoked gas mantle is wasteful of gas. It becomes a waster in a similar manner and to the same degree as the flat-

flame burner. To defer the hour when the mantle becomes inefficient, it is wise to light the inverted mantle from below and the upright one from above.

The selection of globes and shades which diffuse the light over the places where it is needed, is important and interesting. At the present time aesthetic preferences must sometimes give way to the dictates of economy. Silk shades unless they are very pale and lined with highly glazed satin, consume the light to a degree not permissible at this period. Art shades made of pieces of stained glass leaded together are destined to a period of desuetude in all patriotic homes. Paper, parchment and linen shades in white, tan, cream, yellow, pale green, pale blue or rose pink, lined with white glazed paper shed the light downward efficiently. Where light is used purely for occupational purposes, no shade is more useful than the old-fashioned one of green or amber porcelain lined with white.

Light-colored walls and woodwork are greater economizers of light than would be realized without experiments and experience. Altho we may not do much repapering and painting, we can pack away dark table covers, cushions, curtains, and lamp shades. We can bring some of our lighter furniture, such as wicker, into the apartment where most light is burned and move into occasional rooms some of the heavy mahogany, cherry and teakwood.

# What to Do in December

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## THE GREENHOUSE

**Christmas Gifts** Poinsettia should be kept in a warm place free from draft. Apply a little dried blood which may be bought from any seed house. Keep the soil moist but never wet. Dried blood, heat, sufficient moisture and sunlight are needed.

Jerusalem Cherry. Keep in a cool place but not in a draft, otherwise the leaves will turn yellow and drop off.

Ornamental Peppers. Give plenty of water but keep the plant cool.

Cyclamen. Do not place where there is much sun and always keep the plant cool.

Begonia (Gloire de Lorraine). Keep all the dead bloom picked off and new bloom will appear. Keep the soil moist. Apply a small pinch of nitrate of soda each week and water freely.

Bulbs of hyacinth, tulip, daffodil and crocus make worth while gifts. If planted in December and kept in a cool place for six to eight weeks and finally brought to the light they will make a fine display of bloom early in the spring.

**Roses** December is the backward month for long stems and perfect bloom.

Keep all yellow leaves from bush and bed. Top dress the surface soil with sheep manure and bone meal. If well decayed cow manure from the pastures may be secured chop this up fine and mix a little fine bone dust and mulch the bushes. Stir the surface soil very lightly. Keep the red spider in check by spraying with a strong force of clear water on bright days. Fumigate by burning tobacco stems moistened with water and also nicotine paper.

**Bulbs** All bulbs to be forced for Christmas bloom should be placed where they have bottom heat. Narcissi planted in flats for cut flowers should be watered freely and kept in a warm house. Give as much sunlight as possible. Feed the plant a weak solution of liquid cow manure. Blooms that have opened early may be held back by keeping the plant in a cool, dark place. Keep the soil moist but not wet. Calla lilies may be planted now in one-half decayed cow manure and one-half decayed sod chopped up fine, and garden loam. All side shoots should be kept cut off. Apply water freely.

**Sweet Peas** This is the month when the enemy of the sweet pea puts in an appearance. If the plants are kept healthy there will be little danger from red spider. All dried plants, killed by injury or decay, should be removed and burned. Use extreme care in fumigating. The fumes must be kept cool by moistening the tobacco stems, otherwise the pea vine foliage will become spotted and dry.

**Palms, Ferns and Foliage Plants** Wash the foliage of palms with whale oil soap and clean water.

Place the palm of the hand on the underside of the foliage and with the sponge in the other hand wash the top of the palm leaf. Care should be exercised not to crack or injure the foliage. Wash the foliage off with clean water the following day. If scale insects are lodged where the sponge does not remove them use a soft tooth brush and whale oil soap. Never use oil to make the foliage shine, this practise stops up the breathing pores and smothers the plant. Ferns should be kept warm and moist. If scale appear on the foliage, make a thick suds of fish oil soap, place the fingers over the surface soil to keep the ball of soil in the pot, invert the plant and dip the foliage in the suds. This should be done several times. A soft tooth brush will then easily dislodge the scale. Clean the foliage by handling the plant in the

same way, but washing it in clear water. The water should have the chill taken off.

There are no finer foliage plants for Christmas decoration than a collection of the Dracaena and the Rex Begonias. These plants require the sun, clean air free from gas and sufficient moisture. The Begonias lose their leaves if allowed to chill.

**Cuttings** The latter part of the month, make cuttings of carnations, chrysanthemums and most of the bedding plants. Always use clear sand in the propagating bed to prevent disease. Water the cuttings freely. Shade for a few days. Never jam the cuttings into the sand. Do not allow air spaces about the base of cuttings, pack the sand tightly about them.

**Seedage** For an early spring bloom sow the seed of stock, candytuft, zinnia, calendula, balsam, calliopsis and anterrhinum. Sow the seed in shallow flats, cover it with a very light coating of sand. Shade the flats until the seed germinates, then remove the covering. Do not keep the soil wet or the greenhouse too warm.

**Vegetables** If your greenhouse is near a base hospital you could do no greater service than to raise fresh vegetables for the sick soldiers. The following list of vegetables may be grown in a cool house: Grand Rapid loose leaf lettuce, beets (Crosley's improved Egyptian), carrots (French forcing), radish (French breakfast). Intensive culture may be practised by sowing the seed of the radish between the lettuce plants. If aphides appear scatter tobacco stems over the surface and under the foliage. Rhubarb and asparagus may also be forced in a cool house.

The following vegetables require a warm house: Snap beans, cucumbers and tomatoes.

## VEGETABLE GARDEN

**Onions and Spinach** If the spring onions and winter spinach have not been mulched with straw, this is the last call for that work. It is not so much the freezing as it is the freezing and thawing of the plants that destroys them.

**Lettuce and Parsley** There is no better plant to raise in the hotbed than Grand Rapid lettuce. Ventilate on bright days. Close down the glass so as to get the heat of the afternoon sun and then use straw mats to hold the heat in. Shutters may also be used after the severe weather sets in. Parsley will stand the cold but should not be frozen.

**South** Where the soil is fit to work, plant the smooth varieties of peas, New Zealand spinach, endive, early Charlestown Wakefield cabbage. White potatoes are sometimes planted the last of the month and three to six inches of soil thrown over the seed. They are dormant until early spring and then come up before the soil is fit to work. Early Southern crops reach the Northern markets five to six weeks before the Jersey crops are ready.

**Mulch** Both the asparagus and rhubarb beds should be mulched heavily with stable manure. Do not neglect this, for it means, if properly done, a big crop next year.

**Manure** It is not a bad practise to haul the manure directly to the fields. This saves much time in the spring when so many things should be done. Do not leave the manure in piles where the fertilizer will leach out in spots but scatter it evenly on the surface.

**Storage** Remove all decayed or decaying vegetables or fruit. All bad odors should be eliminated. Keep out the frost. Let in fresh air during the mild weather. Add more soil to the out-of-door

pits so as to keep the vegetables below the frost line. Keep a lamp burning in the cellar on severe nights. Keep a pan of water near the lamp. In the morning ventilate so as to admit fresh air. Sort over vegetables, especially potatoes and fruit. Keep mice and rats out by placing tin about the edges of the cellar.

## FRUITS AND BERRIES

**Orchard** Protect newly planted fruit trees from rabbits and mice by wrapping the trunk with tar paper. If wire is used be sure to make it stationary with stakes, otherwise the movement of the wire caused by the wind will girdle the tree. The protection should be two feet high. Place this collar a little below the surface soil so that rabbits and mice may not burrow under it. All weeds and grass should be removed. Clean up the orchard. Burn branches and wood. This is a good month to gather the eggs of the tent caterpillar from the young limbs.

**Black Knot** Clean out all hedgerows of wild cherry and plums. Burn. This will not only destroy the tent caterpillar but will destroy the much dreaded black knot. These wild trees also harbor the San Jose scale.

**Grapes** Mulch the surface soil heavily with stable manure and scatter about the vine a liberal application of coarse bone meal. Prune so as to leave two to four buds on each cane that is to become a leader. There should be about five or six leaders to a single vine. Make cuttings now and pack in sand. Three buds to a cutting. Remove all cuttings not desired and burn.

**Spray Material** It costs from fifteen to twenty-five cents to spray a tree thirty years old. It pays. Buy your supply of lime sulfur and arsenate of lead now. Sulfaside is a practical spray for apples, peaches, pears, plums and cherries if applied just before the bloom opens. Two ounces of sulfaside and three teaspoonfuls of arsenate of lead to three gallons of water will check disease and destroy the chewing insects.

**Strawberries** If you have not already mulched your strawberries this is the month to do it. This is the last call.

## FLOWER GARDEN

**Roses** All the tender roses should be protected by this time. A little soil banked about the bush would help to protect it. Add a good rose book to your collection of garden books.

**Flower Beds** The wild flower garden should be covered with from two to eight inches of leaves. Hold these in place by the use of pine boughs. Mulch all shrub beds heavily with stable manure. A little coarse bone meal mixt with the manure will add greatly to the fertility. Keep a heavy blanket of straw over the bulb beds. Branches laid on the straw will help to hold the snow, which is a very satisfactory covering. Do not use stable manure around evergreens.

**Garden Friends** It is not only your duty but it is a practical bit of forethought to protect the birds. Place a large piece of suet on the limb of a tree or on the bark. The suet may be hung in a net or held in place by a wire screen. It should always be out of the reach of cats. Keep the nuthatches, juncos and woodpeckers about your garden and orchard. They not only destroy the eggs of insects but destroy as well the grubs in early spring. A little water should be placed each day where the birds may come and drink.

# WHEN AND HOW TO PRUNE

BY WILLIAM C. McCOLLOM

*Prune clean, close against the trunk*

**A**LTHO fruits can hardly be considered a staple such as wheat, they are just as necessary to the good health of the community. Apples, pears, peaches, plums, grapes and other fruits should be a part of our everyday diet. The time has long since passed when the back yard had its wheat patch, but it is different with fruit, for any country dweller may have at least a few trees. There is a fascination in growing one's own fruit, but unfortunately we are compelled to admit that our professional orchardists are the only ones producing fruit on anything like a proper basis. The principal factor that contributes to the success of the orchardists is modern scientific pruning, the constant, consistent habit of removing superfluous growth so that the energies of the plant's resources may be forced into the proper channels.

Nature always pruned during winter, the high winds and heavy snows freeing the tree of its dead wood. Modern pruning does not confine itself to dead wood. Where live wood is cut, the earlier it is done the better chance it will have of healing before the sap starts running. There is only one exception to the general practise of fall pruning: in some cases tender plants will winter kill beyond the point of cutting. This necessitates going over the plants again after the severe weather has passed. This is true of tender roses, hydrangeas, etc., but as most of these tender plants are protected in some manner over the winter their pruning is rather a separate matter.

Fall or early winter pruning is very necessary with some types of trees and shrubs. Plants of any kind that have open porous wood, such as grapes and maples, will bleed to a dangerous degree if cut in spring when the sap becomes active. By

pruning in fall the cuts will be properly healed by the time the sap becomes active.

Lilacs, forsythias, spires and other flowering shrubs of this type should not be pruned in fall. One can't make any hard and fast rule as to time, as each requires individual treatment, but they should be pruned immediately after they have finished flowering. These plants all produce flowers on mature wood and any cutting prior to the flowering season is simply reducing the quantity of bloom.

One of the finest arts in gardening is the proper pruning of fruiting trees and shrubs. Each type varies according to its habits. Apples, pears and cherries fruit on spurs which are found on the mature wood; peaches, plums and apricots produce on new wood with some fruiting buds show-

*Removing scaly bark that protects insects*

Cane fruits that produce on new wood formed on the previous season's growth must be reduced in proportion to the plant's growth. This applies to raspberries and blackberries. The cane should be cut back about one-third and all canes that have previously fruited should be cut to the ground, as after they have once fruited they are no longer of any value. Currants and gooseberries are best pruned by removing each season a few of the older and less productive branches.

When pruning plants of this character we have only to consider our desires. If we want a plant low and squatty we cut out the top, if we would have it tall and pyramidal we cut in from the sides. One can't change the habits of the tree, but one can make a runt out of a stately oak if one's taste is bad enough to want it. Trees and shrubs will invariably throw their growth to the outside, becoming dense and heavy. This is the desire of the plant to push its growth up to the sunshine and air, and if this continues it will cause a quantity of long, thin, top heavy branches. Such trees are damaged by storms, but if the outside growth is occasionally thinned this danger will be relieved, for the branches will be sturdier in every way. Don't take a saw and determine to do five years' work in as many minutes. Pruning must be done consistently to attain one's objects. All branches that cross and will eventually rub together must be removed clean. If this is done when they are small, before they attain prominence in the structure of the tree, they will never be missed, but if left until they are large the removal may temporarily ruin the shape of the plant.

In all pruning operations special care should be exercised that all cuts are absolutely clean, leav- [Continued on page 337]

*A well pruned young tree—a few strong branches are better than many weak ones*

ing on the old wood in some cases; cane fruits produce on wood formed the previous season, and currants and gooseberries fruit on buds which form on the old wood but especially the younger and more vigorous branches.

Young plants of any kind should be pruned vigorously, for at this stage growth which forms the nucleus of a healthy fruit bearing tree is desired. Altho some pride themselves on the fruiting of small trees it is far from being a good practise. Assuming that a small apple tree has just been planted, the main stem or leader branch should be cut back at least one-third its length, and the lateral branches reduced the same proportion. This kind of pruning starts the tree into a heavy vigorous growth and the general principles can be applied to all classes of fruit trees. The second season the growth can be reduced about one-fourth, assuming, of course, that the growth has been normal. The third season about one-eighth of the current season's growth can be removed, and from this time on the pruning can become more general.

When a tree has reached a point where its fruiting possibilities are developed it will require somewhat different treatment. The cutting should consist of the removal of superfluous wood and the controlling of the shape of the tree. Superfluous wood is the thin weak interior branches.

*From currants, remove old shoots entirely*

*Fall is the proper time to prune grapes*

# AMERICAN MADE TOYS

During the past two years American toy makers have much increased their output, to keep the children happy with mechanical, electrical, musical, military, instructive and pleasing toys for indoors and outdoors. Old favorites and new claimants for Christmas attention crowd the counters. These few illustrations may help you to a patriotic and loyal choice.

Imagination and this reliable steed will carry a boy far afield on many thrilling and exciting adventures

This automatic armored car moves vigorously, firing its gun and emitting smoke

The armored train may for a time claim right of way over passengers and freight

To the patient, mechanical mind the possibilities of steel construction are absorbing

This automatic fire truck comes right up to the house and hoists its ladder

Nothing ever will lessen the interest in the world's chief toy—the doll. They are of many nationalities and costumes

Here is a new drum that beats a fine roll—with no sticks!

The camouflaged tank climbs rapidly and fires surprisingly

For the rainy day when dolls and "playing house" are full consolation—a stove completely equipt

Here is excitement and charm! A real, workable, thoroly practical small theater

Three feet long, this accurate model of the U. S. S. Scout Cruiser "Chester" goes rapidly thru the water, electrically propelled. It has a complete wireless apparatus

# CLOSETS BUILT TO FIT

BY WINNIFRED FALES

PHOTOGRAPHS BY MARY H. NORTHEND

The platter problem is solved by separate shelves. This plate warmer is built in and is conveniently near the dish closet. Contents should decide the size and division of the kitchen cupboard. Coiling the vacuum cleaner hose will save space.

IN advertising a house to let, the most tempting bait the wily real estate person can dangle before feminine eyes consists of five magic syllables: "ample closet space." But unfortunately the coveted closets often prove a hopeless misfit—mere holes in the wall—whose dimensions bear no conceivable relation to those of the objects they are meant to house, and which in consequence are consumers of space, energy and patience.

Probably the ordinary clothes closet is the worst offender, with the dish closet a close rival. The first-named belongs to one of two types: a huge dark cavern with rows of iron hooks along the sides, or a recess just too shallow to permit the installation of a pole and hangers, and burrowing so far into the partition on either side of the door that the removal or replacement of garments in the extreme ends is practically impossible.

Such closets are the last word in inefficiency; yet they are by no means beyond redemption. In the "cave" type, a pole can be introduced along one side from front to back, supported by wooden or iron brackets projecting from the wall; and in a closet of unusual width and depth, as one extending beneath a stairway, poles may be installed on three sides. Even the single pole, however, will more than quadruple the original capacity, if furnished with hangers of the thin, flat, wooden type, a dozen of which occupy less than four inches of space.

Above the poles a hat shelf can be built, or two shelves placed the right distance apart may have the enclosed space divided into compartments with drop fronts, thus effectually protecting the contents from dust.

The broad, shallow type of closet can be treated in either of two ways. It can be enlarged by building on a three or four inch projection, thus making it deep enough for a pole to be run along the center, or its capacity can be increased without alterations by the in-

stallation of a telescoping steel rod fastened by one end to the rear wall. This device has a movable section, furnished with hangers, which can be drawn forward thru the doorway when the closet is opened, thus affording ready access to the garments hung at the back. If double doors can be substituted for the single one, so as to do away with the dark "pockets" at either end, two sets of rods and hangers can be installed, thus utilizing the closet's capacity to the full.

In planning a new dish cupboard or remodeling an old one, the chief consideration is the depth and spacing of the shelves. As a rule they are too wide, and almost without exception they are so far apart that from one-fourth to one-third of the total closet capacity is wasted. It is neither essential nor desirable to have the shelves spaced with mathematical regularity. Instead, decide what each shelf is to hold, measure the height of the tallest object to be placed thereon, and add two inches to give the distance between that shelf and the next above.

Platters are always a problem. One platter laid flat on a shelf is a space waster. A stack of platters high enough to fill the space between shelves is heavy and difficult to handle, and to place the platters on edge at the back of the shelf behind the

other dishes is a standing invitation to disaster. One housewife solved the problem by building into a narrow pantry closet a set of shelves only two inches or so apart, each for a single platter. A similar compartment was provided for serving trays, but in this case it was found more feasible to slip the trays edgewise between vertical partitions than to set them flat on shelves.

In this same pantry the depths of a series of drawers were intelligently varied to suit their respective contents, namely; flat silver, small pieces of hollow ware, table linen and dish towels. The silver drawers were subdivided into suitable compartments for knives, forks and spoons of different kinds and sizes. Another ingenious device was a plate warmer connected with the steam heating plant. This occupied a built-to-fit recess, and being enclosed only by slatted shutters, warmed the pantry as well as the dishes.

One important but often omitted convenience in the kitchen department is a special closet dedicated to brooms, mops, brushes and the suction sweeper. A tall, very narrow closet is the logical choice unless the house has a stationary vacuum cleaning system, in which case more space will be required for storing the bulky hose. As the accompanying illustration shows, the hose may conveniently be coiled around

a curved wooden support nailed to the rear wall of the closet. The closet in question has one grave defect. It should have been high enough to permit the hanging of brooms and mops against the side walls, clear of the floor.

An upstairs broom closet is a valuable step saver, and it is seldom that space for one cannot be found in the upper hall, built into a partition so that the front is flush with the wall surface. It should be no larger than necessary to hold a broom, brush, dustpan, and a chemically treated dry mop for dusting floor borders, with a shelf or two above for dusters and soaps.

No cramming here, everything can be placed at once by its size.

A place for everything, large and small, is found in this sewing room.

# THE PEACE STATUS OF AUTOMOBILES

By JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

CLOSELY following the signing of the armistice certain governmental restrictions affecting the manufacture, sale and use of motor vehicles were revoked, in fact practically all except those of special taxation, and at this writing it seems probable that these will be materially reduced from the figures given in this department of The Independent two months ago. As a result the general feeling in motor travel and motor transportation circles is that the lid has been lifted, and that the rapid extension of these valuable economic factors, halted temporarily by the emergencies arising from our participation in the war and by lack of proper governmental appraisal of their worth, could now proceed unhampered.

One of the restrictions removed was that prohibiting the holding of automobile shows, and this was particularly well received as these annual exhibitions have played an important part in the remarkable progress of the motor vehicle, and are now held in every city of any importance throughout the United States. This ban, however, was not strictly enforced as several automobile shows have been held in the past two months, and the signing of the armistice came during the actual running of the annual Pittsburgh, Pennsylvania, Automobile Show. In view of this situation the recent action of the National Automobile Chamber of Commerce in deciding not to hold the big annual national exhibitions in New York and Chicago this winter is of special interest. This action, however, will not prevent the holding of other automobile shows, for already the New York Automobile Dealers' Association has announced that it will hold a show next February or March, which will differ from those of former years only in the promoting organization, and similar action is expected in Chicago before these words appear in print. Practically every other established automobile show will be held, the dates being from a month to six weeks later in the season.

Because of the bearing which it has on the questions now uppermost in the average motorist's mind, namely the quantity, character and price of automobiles during the coming six months or full year, the statement made by the National Automobile Chamber of Commerce in abandoning the national shows is of interest. It reads as follows: "The manufacturers decided, by an overwhelming vote, not to hold national shows at New York and Chicago in the winter of 1919. They were actuated by the belief that it would not be possible to prepare such exhibitions as will do justice to their desire to present, at the proper time, such a display as will be representa-

tive of the industry and properly celebrate the victory in which it has had so prominent and successful a part." Before this announcement appeared various newspapers made comments on the decision to the effect that the real reason was that some manufacturers were so deep in war work other than motor vehicle production, that they could not be ready to take advantage of the benefits of the big shows this winter, while others had a surplus stock of cars on hand which it was desirable to dispose of before offering new models. One prominent New York newspaper asserted that the surplus of new cars in storage at this time exceeded thirty-five thousand, which fact is mentioned here because it is both true and conservative. In other words the buying of passenger cars during the past year has been even more curtailed than the production.

Another viewpoint of the foregoing question is contained in the following statement from the N. A. C. C. concerning the same meeting of manufacturers at which the show decision was reached. "It was brought out at the meeting that the normal production of passenger automobiles for 1918 would have been about 2,000,000, as 1,718,000 were produced in 1917. The output was curtailed voluntarily thirty per cent last March, and again in July was reduced to fifty per cent of the production rate last year. Under this curtailed program it was estimated that the output in 1918 would be less than 1,000,000, creating an artificial shortage of approximately 1,000,000 cars for the year." If this statement means that there will be a market in the United States during 1919 for a million passenger cars it is highly conservative; if it intended to convey the idea that there will be a market for a million of these vehicles in addition to a normal market of two million it is the exact reverse. The conditions which have curtailed the buying of automobiles in the past twelve months will continue with only gradual diminishment for many months to come. Incidentally the variance in attitude on the show question between the makers and the dealers indicates that it is not the latter who are carrying the surplus stocks of passenger cars.

The automobile industry faces serious problems as a result of the advent of peace, and they are serious because of the extent and wholeheartedness with which the makers entered into war work, and undertook the production of a variety of munitions and other war materials wholly foreign to motor vehicle manufacture. An idea of these problems is contained in a subsequent N. A. C. C. announcement, extracts of which follow: "The manufacturers are all

anxious to resume the production of passenger cars and trucks for civilian use as quickly as possible, but necessarily it will take some time to accomplish this, especially for the larger makers whose facilities were practically engaged wholly in war work, much of it entirely foreign to motor vehicles. . . . Under the instructions of the War Industries Board the passenger car manufacturers have striven during the last four months to liquidate their stocks of materials on hand in order to get on a 100 per cent war basis. . . . From three to four months will be required to secure deliveries of parts and materials for the construction of regular models, and during this period there must be readjustment not only of materials, but of machinery, finances and labor. This will necessarily restrict production to approximately the present seventy-five per cent basis during the coming winter. When it is realized that the industry which did a business of \$1,250,000,000 in automobiles and trucks in 1917 took on \$1,000,000,000 of war contracts, the stupendous task of reconversion will be realized. . . . The high prices at which parts and materials have been and will be purchased, and the high wages paid to labor will necessitate the maintenance of present prices of cars and trucks until the manufacturers are able to get back into large volume production and prices of materials are lowered."

The motorist may therefore feel assured that there will be no shortage of passenger cars during the coming year and that the prevailing prices will be generally maintained for some months to come at least. Further, there will be few if any radical changes in design, altho new models, so called, will be forthcoming. It is true that the military use of passenger cars has brought developments that will be incorporated in automobiles of the near future, but as in other years we may expect to have these largely introduced by the European manufacturers. Special taxation may be expected to continue for at least a year, and it is significant that most manufacturers have adopted a standard clause for sales contracts which obligates purchasers to repay the makers the amount of any future tax which the Government may levy on the particular vehicle involved in the transaction. The fuel situation will not become normal until the heavy export requirements fall off as the production and transportation of oil from the fields in southeastern Europe and Russia are restored and naval disarmament begins. There is, however, little likelihood of any further restrictions in this connection, such as the "gasless Sundays" of recent memory.

## THE IDEAL NATION

BY WILLIAM PIERSON MERRILL

PASTOR OF THE BRICK PRESBYTERIAN CHURCH, NEW YORK CITY.

A Paraphrase of the XVth Psalm, in terms of National and International Life.

1. Lord, what nation shall stand before Thee, and be counted worthy to dwell in Thy world?

2. One that is upright in all its dealings, and has no guile in its diplomacy or in its heart;

3. One that does not play the spy upon its neighbor, nor harm a friendly nation, nor despise or calumniate other peoples;

4. One that will have no dealings with international reprobates, but honors such nations as fear God and deal honorably; one that keeps its promises, and holds sacred its plighted word, even to its own military and economic disadvantage;

5. One that does not exploit weaker nations for the sake of material rewards, nor make unholy gain at the expense of the innocent.

In developing the New Steel Golf Shaft A. G. Spalding & Bros. have relieved an alarming situation and performed a real service for the game—since it is no longer possible to obtain fine hickory in quantities. And although it is made of steel this shaft will not rust because it is protected from the elements by the Parker Process.

## “This Rustproof Steel Shaft Gives a Longer, Sweeter Drive than Wood”

With hard second growth hickory fast disappearing, the day of the good wood golf shaft is almost o’er.

For the good of the game and the golfer, Allen Lard, the noted engineer and golfer of Chevy Chase, has produced a counterpart of the fine hickory shaft in a masterpiece of chrome vanadium steel.

To insure strength the cold drawn high carbon tube is ribbed—to absorb the shock and create the pleasant “feel” of the hickory the steel is slotted as shown in the illustration—and to make this metal shaft practical in all kinds of weather it is *protected from rust by the Parker Process*.

### *Is Your Own Product Proof Against Rust?*

Is your own product proof against rust—or do you have to sell it to your customer with the tacit admission that sooner or later it will corrode—and waste away in service?

Every manufacturer who uses steel or iron in any way will find much of interest in the new Parker Process book for industrial executives—a concise treatise on rustproofing which explains how the Parker Process is now used on metal articles from household ranges to fountain pens—from automobiles to building hardware—and how easily you can apply it to your own product without interfering in any way with your present manufacturing plans. Your copy will be sent immediately upon request.

## FOUR ENGLISH HOSPITALS

(Continued from page 321)

that the patients were. It gave the whole place a very warm, colorful and cheery atmosphere.

Queen Mary's Auxiliary Hospital at Roehampton was the third hospital we visited. It is under the command of General McLeod. "Hope Welcomes All Who Enter Here" is the motto over the doorway. It is indeed necessary to bring such hope to the disabled men who come here armless and legless. These men are not only given new limbs but are taught some useful occupation while they are in the institution.

The hospital does not take men from the first moment they are wounded but only after the stumps of the arms and legs have healed up and are ready to have the artificial limbs put upon them.

The commandant first conducted us to where a man with an artificial arm was spading up a garden. As far as I could see he could shovel earth over his shoulder as well as any digger whole armed. The whole of his right arm had been amputated but his artificial arm was moved by straps attached to his shoulders. He had unscrewed his artificial hand at the wrist and the spade was attached to a hook at the stump.

We next went into the hut where artificial legs were manufactured. These are made from light seasoned willow and of course are hollow, with a genuine laced up boot at the bottom. When only one leg is gone there is no difficulty in making a new one which will serve almost as well as the old. The difficulty comes when both legs are gone, especially if they have been amputated near the hip. In this case the two new artificial legs are usually made shorter by four or five inches than the old ones. This is because the nearer the ground one is the easier it is to balance. The patient, however, in this case, has to be taught to walk all over again. After the legs are first put on he propels himself between two parallel bars balancing and guiding himself with his hands. It is very hard work at first and I noticed the men had to stop at frequent intervals to rest and wipe the moisture from their foreheads. I met one fellow with both legs amputated who had learned his loss so well that he not only could walk but could run and jump. I saw him take a running start along the hallway and jump out of a side door into the garden four feet below. The jolt of landing did not seem to discompose him at all.

All the artificial legs have joints at the knee, ankle, toe, etc. Of course, as a patient walks along his legs tend to remain stiff at the knee. Otherwise the leg might double up. When he wants to sit down he pushes a button at the thigh and the knee bends. A man with two complete artificial legs usually has to carry a cane, but if his legs have been cut off at the knee he can walk almost as well as ever. The armless and legless men are all taught trades and have no difficulty in getting jobs. In addition to whatever a soldier may get at his trade the Government gives him a pension of 27s 6d a week.

The hospital has a capacity for 900 patients, and when I was there 700 were undergoing treatment. Already 14,000 have been graduated from the institution. No Americans had yet been sent to this hospital, but the commandant said he expected them shortly. About forty per cent of the men return to their old trades. The Government gives them complete training for at least six months in electricity, carpentry, shorthand, typewriting or bookkeeping.

The colonel said it was really an inspiration to work with these men. It was not a matter of money with them, for they are

assured of their pensions for life. But they are determined to make the most of their opportunities and that spirit overcomes all handicaps.

The saddest sight I saw in England, perhaps the saddest sight I saw in Europe, was St. Dunstan's Hospital, where 900 groping men were living—men who would never see the light of the sun for the rest of their lives. St. Dunstan's, Regent Park, was once the home of the old reprobate Marquis of Steyne, the chief villain in Thackeray's "Vanity Fair." In recent years it has been the London home of the American financier, Otto Kahn. But when the war broke out Mr. Kahn gave it to a distinguished committee under the chairmanship of Sir Arthur Pierson, the well known blind publisher. As I said, St. Dunstan's was the saddest sight I saw in England, but it was sad only to the visitor, for I can truly say that I have never seen such real happiness in my life as was exhibited by the inmates of this peaceful homelike hospital. Everywhere was joyfulness, cheerfulness and bright smiles. In most of the rooms I found them singing at their work. Each patient has individual instruction and it warmed one's heart to see some good Samaritan English girl teaching an eager soldier how to make daylight out of his darkness. Down the middle of each room I noticed strips of oilcloth so that the men could walk by the feel of their feet. When they have to traverse some difficult place—say from one hut to another—a railing is put up so that they can guide themselves by the touch of the hand. Before the railing turns a hump announces it. I went into the assembly hall where the plays and musicales are given. The plays are just the same as would be presented in any theater except that it is not necessary to have scenery, property or costumes. We looked into a room where a nurse was teaching a dozen men the art of massaging, an art at which they become most adept. We then went thru the huts where they were learning basket weaving, carpentry, shoemaking, cabinet making and loom weaving. In another room we saw them being taught Braille. In an out hut we found them learning how to raise chickens and rabbits.

In the carpentry department a blind man had become so proficient that he was made foreman. He told me that they seldom allowed a man to take up his old trade, for a man had very fixed ideas on that subject and is not therefore teachable. They almost invariably start him on something far removed from his old occupation so that he can have no grounds for arguing about the way he is being taught. But wherever we went in that old historic country place we could feel its splendid spirit. No wonder it has been called "The Happiest House in London."

Most of the blind had broken noses or smashed faces, but as they will never see how they look it is not thought necessary to ask them to undergo the severe treatment such as they would receive in the Sidecup or Wandsworth hospitals simply to make them more sightly to their friends and relations. I am told that many women take compassion on these men and marry them, especially women whose lovers or husbands have been killed at the front.

For purposes of admission no man is considered eligible to St. Dunstan's unless his sight is considered so injured that he is incapable of earning an independent existence. There are many therefore who can distinguish light, tho a large majority are absolutely blind. It is said that it is far better for a man to go blind young

MOTOR CAR  
UPHOLSTERY

CHASE

Leatherwove

"'Tis like the hide in most respects  
In some respects 'tis better"

Made by Sanford Mills

**America's Foremost  
Upholstery Fabric**

**T**ODAY more than ever, thrifty housewives and motorists should be interested in re-upholstering—the most economical way to brighten up the home furniture, and improve the appearance of the motor-car.

Leather is scarce and costly, therefore Chase Leatherwove, which by the way is purchased by the U. S. Government for upholstery purposes, should be considered.

It has all the merits of hide at less cost—beautiful, durable, weather and stain proof, sanitary, and plenty of patterns to choose from.

Ask your furniture dealer for Chase Leatherwove or write us. For upholstery use Leatherwove Galloway or Leatherwove Gibraltar.

Other grades for scores of uses.

FOR  
FURNITURE  
UPHOLSTERY

than to lose his sight after middle age. Youth's buoyancy and powers of repair, mental as well as physical, and its inherent faculty of living in and for the present make it more possible for blinded youth to start life over than for the middle aged.

I was told that one of the most important points in the training at St. Dunstan's is the teaching of independence. Blind men are instinctively timid and dependent. The greatest pains therefore are taken to teach them to shift for themselves.

Whatever occupation the men train for practically all of them learn to master Braille and the typewriter. Every man is given a typewriter as his own personal possession when he has passed the writing test imposed. The reason that typewriting is taught—except to those who have learned shorthand before—is because the handwriting of a blind man very soon deteriorates almost to the point of illegibility.

The curriculum is divided into two class room periods, two and a half hours in the morning and two hours in the afternoon. No matter how badly a man is afflicted something can always be found for him to do. I was told of the case of one who had not only lost both his eyes but both arms and legs. He was taught to lecture for the hospital. He was sent all over the United Kingdom and was said to be a wonderful money getter for the institution.

The men are taught to play as well as work. They row, swim, and have running races and contests of war. Even drill is regularly practised. There are two dances every week, one a lesson and one a "regular ball," to which each one may invite a lady friend. Debating is also very popular.

As I have said at the beginning of this article nothing is more creditable to the English humanitarian spirit than her hospitals. While I was in London I noticed the following advertisement in the *Times*: "Blood transfusion. Only chance of life for soldier's orphan. Immediate offers from healthy adults to Child Welfare Inquiry Office, 845, Salisbury House, E. D. 2. Telephone: London Wall 5169." I learned that many hundreds of offers were made in response to this advertisement and volunteers came forth from almost every class, including officers, soldiers, sailors and wage earning girls. Even wounded soldiers have gone out of their way to say that they were perfectly fit and would like to help a soldier's child. A boy of seventeen offered his blood "for the kid because his father died for me," and a soldier's wife with her little children around her said, "I am pretty strong, and I'd like to do it just as if it were one of my own." This is the spirit of England toward those who suffer.

In conclusion may I assure American fathers and mothers that if their wounded boys have been sent to an English hospital they can rest absolutely certain that everything that medical science can do will be done for them and that England will treat them just as tenderly as her own.

And further, any American boy who visits England on his leave of absence will find England as truly Blighty for him as it is for the Tommies. The English people have already many organizations to welcome him and they will take the best of care of him whether in illness or health. We Americans often get the impression that the English are a cold and self-sufficient people, but the real explanation of their reserve is that they are shy and have an almost abnormal fear that other people may think them obtrusive. There is no warmer heart at bottom than the English heart, and any of our boys who have been cared for in English hospitals or welcomed in English homes will never misunderstand the magnanimity and generous hearts of our cousins across the sea.

## A Welcome Xmas Gift for any member of the family

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

**W**ALLS and ceilings that endure are assured when Liquid Velvet is used

With Liquid Velvet you can secure exactly the shade you wish—it comes in white and 24 colors—and you can at the same time be certain that the beauty thus acquired will be lasting. Liquid Velvet is washable. Liquid Velvet walls and ceilings may, therefore, be kept fresh and clean for years.

Furthermore, Liquid Velvet, when properly chosen, gives a sense of quiet charm to any room—and the exact shade you desire can be readily selected. Liquid Velvet is an oil enamel, and dries without lustre.

## CLOSETS BUILT TO FIT

(Continued from page 331)

A more elaborate application of the built-to-fit idea may be made in the sewing room closet. One of the best examples known to the writer is the double closet illustrated. One half is fitted with a pole and hangers which provide a place for partly made garments. Above are well spaced shelves on which fabrics and pieces are arranged in boxes. In the other half of the closet, a roomy lower compartment contains a dress form, folding table and hem marker. In the upper half are drawers for "findings" and shelves filled with plainly labeled boxes containing patterns, linings, laces, and miscellaneous trimmings.

In another home one end of the upper hall was fitted up as a sewing room, and in place of a regulation closet with doors, a cabinet equally divided between drawers and drop front compartments was built into the partition on one side.

To be in the highest degree efficient, the deeper drawers of the sewing room closet should be supplemented by two or more very shallow ones properly subdivided to hold sewing silk and cotton, pins, needles, hooks and eyes and other small utilities, and there should be a special cedar-lined compartment with a tightly fitting door, in which to keep woolen fabrics, fur and feather trimmings.

As every housewife knows, a superfluity of closets is inconceivable; therefore, in planning a new home every jog and niche should be turned to account. Even the small spaces beneath windows and in the ends of projecting chimney breasts are convertible into fascinating little cupboards for shoes, toys, or books. Wherever possible the uses of each closet should be definitely determined in advance and its dimensions and interior arrangement regulated accordingly. If for some structural reason it proves expedient to build a closet deeper than is actually needed, at least make the shelves of the right proportion, as this tends to a convenient and orderly arrangement of their contents and reduces the surface area that must be cleaned periodically. It is not necessary that all of the shelves of a closet be spaced alike, tho this, unfortunately, is the common practise. In building bookshelves, for example, the usual plan is to make them all of one width and separated by the same number of inches; whereas there should be at the bottom one or more broad shelves fitted to receive the largest volumes, while those above are both narrower and nearer together, the gradation being varied to meet the requirements of individual libraries.

Paradoxical tho it may appear, it is the closets with the largest amount of unused space that are the most crowded. In one typical, architect-planned china closet, wherein, for lack of room, glasses are perilously pyramided and unrelated plates and dishes are stacked in tottering piles, there are by actual measurement more than thirty-four cubic feet—or approximately 33 1/3 per cent—of empty space. By reducing the distance between shelves and inserting additional ones in the space thus gained, the congestion could be entirely relieved and the housewife's time and temper saved much needless wear and tear, to say nothing of the reduction in breakage.

The specifications for an efficient and space conserving closet are so simple and easy to follow that it is amazing how seldom a model specimen can be found. They may be summed up in two short sentences, thus:

First measure the contents.  
Then build to fit.

## HODGSON Portable HOUSES

You can have that small house you need and still help conserve lumber and labor. Whether a garage, clubhouse, cottage, bungalow, playhouse or any other kind of small house, buy the Hodgson Way.

All you have to do is send for the catalog containing photographs of small houses in many styles and sizes. The dimensions and layout plan are also shown and prices given for every item.

After selecting the one you need, send your order and the house will be shipped in neatly painted sections that can be assembled quickly. When it is finished you have a beautiful, attractive house, exactly as shown in the catalog and at less cost than if you had it built the usual way.

Send for the catalog today.

## WHEN AND HOW TO PRUNE

(Continued from page 329)

ing no bark scars. When removing a branch the saw should be held against the trunk so that no stub is left behind to decay. On large branches an undercut is necessary to prevent the stripping of the bark and the consequent scar.

All wounds should be treated with tree paint to preserve the wood until the bark lip has grown over and sealed the wound. Branches of less than one-half inch in diameter can be removed with pruning shears sharp enough so that the wood is not bruised. A pair of long handled tree pruners will be useful for cutting small branches that can't be reached from the ground with hand shears.

In England, where in the finer details of gardening they seem to be further advanced than we, root pruning is practised quite extensively. Altho root pruning is more generally employed in the cultivation of fruits, it is often used to make ornamental plants more uniform. The result of root pruning is a slower but denser and hardier growth.

Fruiting trees that have attained a size where they should begin to produce, but for various reasons are inclined to throw all their strength into new growth, can be made productive by the proper pruning of the roots.

A trench must be dug around the base of the tree. The diameter is governed by the size and type of tree but ordinarily a tree of four-inch caliper will require a diameter of four feet. Dig below the base of the tree and sever any tap root that may have developed, and fill the trench with good top soil with the addition of some of the more concentrated form of fertilizers such as bone or tankage. No manure should be used as it is conducive to a soft sappy growth, which it is the purpose of the root pruning to abolish.

Girdling has the same effect on a tree as root pruning, reducing the flow of sap to the top of the tree and checking the growth. Root pruning is considerably more work than girdling but is preferred for the beginner because unless properly practised girdling is dangerous.

Girdling is the removal of a small strip of bark just above the base of the tree. In no case should it entirely encircle the tree. The width of the strip should be about one-quarter inch. This will heal quickly and the tree will be none the worse for the cutting.

Trees and shrubs of all kinds should be pruned immediately after planting, to remove some part of the wood to counterbalance the necessary loss of roots in the planting operation.

Trees that lift with a large quantity of fibrous roots need not be pruned as severely as those that have only a few coarse heavy roots with little fiber. Hard wooded trees such as oaks, beech, etc., will require more vigorous cutting than soft wooded trees like the poplar or maple.

Fruiting trees must be cut hard. If they don't start into a healthy vigorous growth they will be of little use. Evergreens can be gone over carefully with a sharp knife removing the growth evenly so as not to show any scars. Those intended for formal plantings can be sheared with a hedge shearer.

If this consistent removal of the growth in proportion to the plant's losses in the planting operation is attended to, it will reduce the enormous loss following planting of various kinds.

# 3-in-One Service

Sea, Sky and Land Service is performed by the U.S. Marines "the Soldiers of the Sea", whose record of service dates form 1775.

The triple service of 3-in-One Oil—lubricating, cleaning, polishing, preventing rust—dates from 1894. For nearly 25 years this high quality oil has been used by marines, soldiers, hunters—all shooters. Army text books recommend 3-in-One for cleaning and lubricating all small arms. Gun manufacturers pack a bottle of 3-in-One with every gun and pistol and recommend its use.

3-in-One removes the residue of burnt black powder; prevents rust inside and out; lubricates the action perfectly; cleans and polishes the stock

3-in-One is the right oil for all light mechanisms, too. Try on clocks, locks, bolts, automatic tools, Victrolas, sewing machines, washing machines, typewriters, adding and billing machines, dating stamps, revolving chairs. Keep it handy and you'll discover new uses daily.

Sold at all good stores. East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Cans.

**FREE** Generous sample and Dictionary of Uses. To save postage, request them on a postal card.

## MARSHAL FERDINAND FOCH

(Continued from page 317)

the first days of August, 1914, there reigned a wonderful activity. Around Foch, splendid officers: his assistant chief Colonel Des Mazis and his aid, Captain Cordier, who both died like heroes; among his staff officers, three eminent strategists, Colonel D'Ambly, now a general, and Majors Biesse and Navel. The regiments of the Iron Division were utterly prepared; they had been commanded and trained, during 1913 and 1914, by colonels and general officers like Grossetti, the hero of the Marne and of Ypres, Maistre, Pouydraguin, the ablest general of the famous Alpine Chasseurs divisions, etc.

Just in the early days of August territorial troops composed of hardened Lorraine peasants came to relieve the guard of General Foch at the Governor's Palace; one of these men, excited by the mobilization, under the burning sun of summer, became suddenly insane, and taking his rifle went on shooting wildly all around the square. His comrades tried to take hold of him but, for some minutes there was a good deal of confusion on the place.

Suddenly, at a window of the palace, appeared General Foch. Pale and worn out by his intensive work, his eyes sad and pitiful. He made a sign with his hand, expressing his wish to stop without violence this first tragedy of the war, and to forgive the poor wretch, victim of his insanity.

General Foch personified at that same moment the idealistic spirit of France, devoted and crucified, only fighting for humanity and suffering more than any other nation.

The staff of General Foch then followed the Twentieth Corps slowly advancing, leaving on its left the fine Seventieth Division, composed of the reserve regiment of the Twentieth Corps, commanded by General Fayolle, to guard the city of Nancy, brave and resigned. Then began the life of the front: the staff and its services reached in a few days a little village on the Franco-German frontier called Rechicourt-La-petite, and there, in a modest schoolhouse, Foch established his headquarters.

Keeping some officers at Rechicourt to control the staff work, General Foch used to pass his entire days and sometimes his nights visiting various parts of the front, cheering up the soldiers.

At first the French drive seemed a success: the Twentieth Corps, striking hard, advanced toward Dieuze and Chateau-Salins, where the French flag is floating now.

The enthusiasm of the officers and of the privates was unabatable. The Twentieth Corps was indeed among the rare units possessing some heavy guns of 120 mm. and of 155 mm. Next to the Eighth Artillery of Nancy and the Thirty-ninth of Toul, they had also with them the best artillery regiment of France, the Sixtieth of Mailly, in which every officer, every gunner, was a crack shot.

General Foch worked every minute with clearness of sight, with conscience, with thoroughness, and inspired with the same spirit his officers, who tried their best to fulfil his wish for strong discipline and for immediate results. All were deeply impressed by his genius.

One afternoon, the officers keeping watch at Rechicourt, heard for several hours a terrific bombardment along the front and suddenly, about 7 p. m., were informed that at Morhange, thru the weakening of some other units, horribly destroyed by the heavy German guns, the Twentieth Corps had been obliged to abandon its position.

119 West 40th St. New York

In perfect order, like in a parade, the Twentieth Corps with its heroic divisions, retreating calmly, defending themselves doggedly, without being broken or pierced, returned toward Nancy and the valley of River Meurthe. During that tragic night Foch organized his headquarters in four different villages, successively abandoning each under enemy pressure. All the soldiers, sad but confident, were commenting, in their hard trials, on the wonderful spectacle they had seen on the high road of annexed Lorraine: their regiments retreating one by one, pursued by German Uhlans and Jaegers, but protected by the gunners of the Sixtieth Artillery.

When the last battalions, the last squadrons, had passed by in a safer zone, Foch, silent, erect, unshakable, the symbol of heroic France, from a field near the road and the batteries of the Sixtieth, was still there, calmly encouraging by gestures the artillery officers. The latter under the eye of Foch were manning their 75's with such an art that the Twentieth Corps, that same night, postponed the brutal German advance on the capital of French Lorraine.

Castelnau, who commanded the army of the "Grand Couronné," has been rightly called the Victor of Nancy: General Foch, whose Twentieth Corps immolated itself, deserves also the gratitude of France. The city of Nancy, the arms of which bear, on a thistle, the double inscription: "Non inultus premor!" "Qui s'y frotte s'y pique!" gave with joy its citizenship to Castelnau and to Foch, its saviors.

Foch commanded during the first period of the Battle of Nancy the Twentieth Corps, and whether from St. Nicholas-du-Port, Manoncourt, or from Dombasle, he showed his masterly leadership and self-control.

General Foch was in constant conferences with General de Castelnau, who knew his old Twentieth Corps and fully appreciated the rare capacities of its chief.

In those early days of the Battle of Nancy, when we feared that the beautiful city with the golden gates would be taken, General Foch, completely worn out, but still showing in his eyes his absolute hope, encouraged the soldiers who, after such a retreat, were fighting one to four, sometimes without food, sometimes without shells or bullets.

When these first "poilus" of the Twentieth Corps saw in the distance the car of General Foch with its tricolor flag, they were at once comforted and forgot their terrific strain.

One night the staff left Manoncourt and put up at Dombasle, nearer the fighting line. The whole night the infantry fire was progressing and the shells were falling every hour closer and closer. An extremely violent German attack was taking place.

Foch left during the night, with a part of his staff, to inspect the brigades and watch the offensive waves.

The next morning he suddenly came back alone with his aide.

He told his orderly to get his luggage ready in ten minutes, and with a calm but grave expression announced to an officer that he was ordered by General Joffre to yield the command of the Twentieth Corps to his friend, General Maurice Balfourier.

He added that it was a great sorrow for him to leave such a magnificent unit with which he had seen hard times. He had to go at once, for he was appointed commander of a new army, just created, and intended to fight in the center of Joffre's army.

Those who saw on his intelligent face so expressive a deep sadness, only attributed it to his departure. We knew later that France had... (Continued on page 347)

# THE NEW BOOKS

## The "Emma Gees" in Action

THE war changed many things of long tradition. Not the least of these is the old familiar alphabet, which would seem to be one thing that would remain the same. The telephone has proved the trickiness of sundry letters of the alphabet, and the Signal Corps had their difficulties until they invented substitutes for the offending members. Thus, M became Emma and the Machine Gunners, the M. G.'s, were promptly dubbed the Emma Gees by the nickname loving soldier.

Captain McBride was a private in the Twenty-first Canadian Infantry, Machine Gun Section, when it went across in the fall of 1914. He was in the thick of the fight from the very beginning and saw all the fighting along the famous Ypres salient, which brought such undying fame to the Canadian troops. Promoted to the rank of captain in the field, he is now an instructor in the United States army, released from active service, probably because, as he says:

The evolution of machine-gun tactics is, perhaps, the most outstanding feature of the whole war. From being, as it was considered four years ago, merely an emergency weapon or, as the textbook writers were pleased to call it, "a weapon of opportunity," it has become the most important single weapon in use in any army, not even excepting the artillery. A properly directed machine-gun barrage is far more difficult to traverse than anything the artillery can put down, and the combination of artillery and machine guns working together, whether on the offensive or defensive, represents the highest point ever attained in the effective use of fire in battle.

Such being the case, it is no wonder that the tales of the exploits of the Emma Gees are among the most thrilling and daring that the war has to offer. Told in the vividly simple style of Captain McBride, these stories leave us breathless and marveling that men could do the things that he has done and still be alive to tell the tale.

*The Emma Gees*, by Captain Herbert W. McBride. Bobbs-Merrill. \$1.50.

## The Heart of a Soldier

MAJOR MACLEAN WATT is not afraid of sentiment, and has the talent of the Gael for expressing tears in laughter, and laughter in tears. The sights and sounds of battlefield, trench and hospital sweep thru these pages with glimpses of horror, but it is with the heart of the soldier that the writer is concerned; the casual heroism of the daily round, the humor in the midst of peril, the exaltation that conquers fear, the simple trust that carries a man thru the gates of death.

"Where are you wounded, old chap?" asked the orderly.

"Hoots," he replied, "I'm no wounded at a'. Fling me anywhere. Look after the rest."

"Look after the rest" seems to be the cry which reveals the rock-bottom of a man's character, laid bare by the war.

Songs by the author are scattered thru the book, and besides the stories of soldiers the Padre has some wise words to say about the church after the war:

More of St. Francis than of Ignatius or Dominic. . . . Christ, not Presbyterian nor popish nor Episcopalian nor Baptist . . . ; the State as a real part of the purpose of God . . . in the clearing of national life . . . a free chance for free men, . . . and God above, beneath, within and around all.

*The Heart of a Soldier*, by Major Maclean Watt, George H. Doran Co. \$1.85.

One of the many quaint illustrations from "The French Twins," by Lucy F. Perkins

## Trucking to the Trenches

THOUSANDS of men driving thousands of wagons and motors filled with tens of thousands of dollars worth of shells—this was a common sight on the roads that lead to the front. In one of the five-day pushes was a young American boy who had enlisted as a truck driver before his own country entered the war. For five days and nights, thanks to a wrecked supply train, he ate nothing but half a can of salmon, some hard-tack and chocolate. For two days and nights he never left the wheel. He tells about it in his letters home which have appeared under the title of *Trucking to the Trenches*:

Forty-eight hours with your fingers cramped around a steering-wheel—rain beating in your face and stinging your eyes till they cried and stung and stuck half shut—straining to see in the dark—fighting the wheel and fighting sleep, knowing that if the latter got you the other would, too—passing the wrecks of carloads of troops that had toppled over and wounded their charges—fighting that which we most dread, the fire that underneath in the brake-bands creeps toward the gas-tanks before you know it's there.

*Trucking to the Trenches*, by John Kautz. Houghton, Mifflin Company. \$1.

## Fairy Tales from Many Lands

THE fairies seem to have planned a special peace celebration of their own this Christmas; so many of them have paraded into print with gay colored illustrations and stories of never-failing happy endings. *English Fairy Tales*, retold by F. A. Steel, is, all things considered, the best book of fairy stories published this season. All the old favorites are included: Jack and the Beanstalk, Tom-Thumb, Red Riding Hood, Dick Whittington, The Three Feathers, The Fish and the Ring, The Golden Ball and lots of others; they are written in a style equally suitable to be read aloud or for the children to read to themselves; and they are illustrated in color by the master

of interpretations of fantasy, Arthur Rackham, who has a faculty of making giants and elves and witches and fairies look perfectly plausible and lifelike.

In contrast to the *English Fairy Tales*, which are familiar friends to most of us, there are published this year three books of fairy tales from other nations. The fairies and their magic are the same in every country, but the setting and the conversation of the "humans" are an interesting reflection of the different nationalities. In the *Spanish Fairy Book*, for instance, "the castle of Floridel and the Palace of Pombat stood front to front, separated only by the marvelous Blue Lake," and everything that happened in the story took place amid royal pomp. In the *Dutch Fairy Tales*, on the other hand, "Klaas Van Bommel lived where cows were plentiful. Klaas was a farmer's boy. He had rye bread and fresh milk for breakfast. There was always plenty to eat at the Van Bommel's house." And the *Hindu Fairy Tales* begin, "If you should visit the very old city of Benares, you would find in one of the little villages that lie in dreamless sleep on the surrounding hills the ruins of an old school. Buddha, the greatest of all teachers, was head master."

All these stories have the charm of fairy magic and adventure and they are incidentally instructive in national customs and traditions. The three books are all excellently illustrated.

*English Fairy Tales*, retold by F. A. Steel, illustrated by Arthur Rackham. Macmillan Co. \$2.50. *The Spanish Fairy Book*, by Gertrudis Segovia, translated by Elizabeth V. Quinn. F. A. Stokes Co. \$1.50. *Dutch Fairy Tales*, by William Elliot Griffis. T. Y. Crowell Co. \$1.25. *Hindu Fairy Tales*, retold by Florence Griswold. Lothrop, Lee & Shepard Co. \$1.25.

## Two Children of Reims

OUT of all the books that have been written on the war there is one especially for the children—the story of the part that Pierre and Pierrette played in winning the war for France. These French twins lived in Reims with their mother while their father was off fighting Germans and when he was sent home wounded they helped rescue him from a fire that German bombs set in the Cathedral hospital. Later they met Sam and Jim of the Foreign Legion and helped them catch a German spy. Lucy Fitch Perkins has told their story with a skill that makes its appeal to both children and grown-ups. Scattered thruout the book are numerous excellent pencil sketches of Pierre and Pierrette and their friends, including the Raveled-Out Dog.

*The French Twins*, by Lucy Fitch Perkins. Houghton, Mifflin Co. \$1.25.

## Jane, Joseph and John

NOT since "The Child's Garden of Verses," by Robert Louis Stevenson, has there been a book of verses that will please the youngsters so much as *Jane, Joseph and John*, by Ralph Bergengren. He wastes no time in trying to write down to the children; he just makes up poems about the things that children themselves think and do—and say to each other. And all the poems are pleasantly consistent about rhyming. Here is Joseph's tribute to the worms:

When the earth is turned in spring  
The worms are fat as anything.

The birds come flying all around  
To eat the worms right off the ground.  
They like worms just as much as I  
Like bread and milk and apple pie.  
And once, when I was very young,  
I put a worm right on my tongue.  
I didn't like the taste a bit,  
And so I didn't swallow it.  
But oh, it makes my Mother squirm  
Because she thinks I ate that worm.

*Jane, Joseph and John*, by Ralph Bergengren.  
Boston: The Atlantic Monthly Press. \$2.50.

## Stories—Fairy and Otherwise

IT is not often that one finds a book that speaks so straight to the heart of childhood as this. Its simple, wholesome charm appeals as well to the child that is alive, tho hidden and half-smothered, in the breast of the most demure grown-up. It has a wealth of suggestion for an endless array of other stories, fairy and otherwise, that a seeking mother can find in its pages.

*The Little House in the Fairy Wood*, by Ethel Cook Eliot. Frederick A. Stokes Co. \$1.

## Stories of Patriotism

THE CHILDREN OF FRANCE. (Henry Altemus Co., Philadelphia.) Stories for children of the heroism and self-sacrifice of the children of France in the Great War.

I AM AN AMERICAN, by Sara Cone Bryant. (Houghton, Mifflin Co., \$1.25.) Little lessons for children in civics, American history and the Great War, told with great patriotic appeal.

LEST WE FORGET. World War Stories by John Gilbert Thompson and Inez Bigwood. (Silver, Burdett & Co.) The outstanding events of the Great War told briefly, simply and in a manner that will appeal to children.

MY COUNTRY, by Grace A. Turkington. (Ginn & Co., Boston.) A text book in civics and patriotism for children, leading gradually from an explanation of what America is and stands for, to chapters on law and government.

## Live Books for Boys

HANDICRAFT FOR BOYS, by A. Frederick Collins. (Frederick A. Stokes Co.) Tells how to make all sorts of things from cabinets to musical instruments. For boys 10 to 16.

FOR THE FREEDOM OF THE SEAS, by Ralph Henry Barbour. (D. Appleton & Co., \$1.35.) An up-to-the-minute tale, tense with the adventures of a lad in the United States Naval Reserve.

THE MASTERS OF THE PEAKS, by Joseph A. Altsheler. (D. Appleton & Co. \$1.35.) An old-time tale of forest scouting told in up-to-date rapid-fire style. Fourth in a French and Indian War series.

THE POST OF HONOR, by Richard Wilson. (E. P. Dutton & Co., \$1.25.) Vivid and concise accounts of individual acts of bravery and daring which have occurred in the Great War. Boys 12 to 16.

THE BOOK OF BRAVERY, by Henry Lanier. (Charles Scribner's Sons, \$2.) Tales of past heroism "in an ascending scale of courage," inspiring to high idealism the boys and girls of today.

THAT YEAR AT LINCOLN HIGH, by Joseph Gollomb. (Macmillan Co. \$1.35.) Entertaining story of an incipient snob whose father sends him to a public high school to be made safe for democracy.

SCOUTS IN GLACIER PARK, by Walter Pritchard Eaton. (W. A. Wilde Co., Chicago.) Breathless scout tales in a Western setting. Mature readers will enjoy these stories quite as much as the younger folk.

FIGHTING FOR FAIRVIEW, by William Heyliger. (D. Appleton & Co.) The story of the captain of a school nine who, thru making a real sacrifice, came to know the joy of real achievement. Boys 10 to 16.

CAPTAIN TED, by Louis Pendleton. (D. Appleton & Co., \$1.35.) Thrilling tale of the way a Boy Scout, by force of his own glowing patriotism, turned a band of slackers into loyal Americans. Boys 10 to 16.

THE LOST HUNTERS, by Joseph A. Altsheler. (D. Appleton & Co. \$1.35.) Thrilling adventures with bears, wolves and other ferocious beasts of the early Northwest. The "hero" is a boy captive among the Sioux.

ADVENTURES IN BEAVER STREAM CAMP, by A. Padayffé Daymond. (Doubleday, Page & Co.) The thrilling adventures which came to two boy campers during a year's precarious existence in an unhabited region of Newfoundland. Boys 10 to 16.

LOST ISLAND, by Ralph Henry Barbour and H. P. Hoo. (Century Co. \$1.35.) An up-to-date "Treasure Island" in which the lost treasure is platinum instead of the traditional gold, but

# SELECTED FOR A WAR-TIME CHRISTMAS

## Esmeralda, or Every Little Bit Helps

By Nina Wilcox Putnam and Norman Jacobsen

Illustrated in color and black and white. \$1.00 net.

The breezy, humorous story of a girl from California, who upsets the traditions of New York's smartest set and incidentally does some splendid War Work. This is a patriotic tale, up to the minute, startling and delightful, that no American will want to miss.

## The Historical Nights Entertainment

By Rafael Sabatini

### The Springtide of Life—Poems of Childhood

By Algernon Charles Swinburne

With a Preface by Edmund Gosse. Illustrated by ARTHUR RACKHAM.

8 color plates and many illustrations in the text. \$3.00 net.

Edmund Gosse has carried out a plan, once made by the poet, to gather his poems on childhood in one volume, and Arthur Rackham has interpreted them exquisitely.

## Clear the Decks!

A Tale of the American Navy Today

By "Commander"

20 photographic illustrations. \$1.50 net.

A thrilling tale of our navy boys in action—based on fact. Thousands of our American boys are today living the life of the hero of this book. It was written by a U. S. Naval Officer during off hours in actual naval service. A wholly enthralling story of American naval activities is here described—the fun, the dangers, the everyday life, the encounters with the enemy.

## The Romance of Old Philadelphia

By John T. Faris

Author of "Old Roads Out of Philadelphia."

100 illustrations. Octavo. \$4.50 net.

The fact that Philadelphia was the center for a long period of the colonial life of the nation gives this volume a historical appeal to all Americans. The illustrations are of the most varied and interesting character.

## Passed as Censored

By Capt. Bertram M. Bernheim, M.O.R.C.

\$1.25 net.

An unusual war book—the original letters of one of the fighters in France, written home without a thought of their later being published. Vivid, human, real, they tell of the superhuman efforts, the great risks, and the feverish activity of the S. O. R. (Service of the Rear), of which practically nothing has ever been told in the war books of the day.

## Joseph Pennell's Liberty Loan Poster

Illustrated. \$1.00 net.

A book for Artists, Amateurs, Governments, Teachers, and Printers. Mr. Pennell describes the right method of making a poster, from the first sketch to the finished print, illustrated with drawings in black and white and color, showing every stage through which his poster passed. This is a splendid record of one of the finest Liberty Loan Posters.

## Decorative Textiles

By George Leland Hunter

527 splendid illustrations in color and half-tones. \$15.00 net.

A perfect reservoir of combinations and schemes, old and new. The first authoritative, comprehensive and thorough work of reference published in any language on decorative textiles for wall, floor and furniture coverings.

## Home and Community Hygiene

By Jean Broadhurst

118 illustrations. \$2.00 net.

A text-book of personal and public health, from the standpoint of the home-maker, the individual and the good citizen. A text for school or home of great value.

## Clothing for Women

By Laura I. Baldt

451 pages. 7 colored plates. 262 illustrations. \$2.00 net.

Gives practical working directions for the selection, design, color, pattern making and construction of women's clothing.

## The Business of the Household

By C. W. Taber

Illustrated. \$2.00 net.

Household finance and management handled with expert skill; based upon actual experience, and solving the problem of making ends meet while getting right results.

J. B. LIPPINCOTT COMPANY, PUBLISHERS, PHILADELPHIA

## BOOKS FOR GIFTS

### THE WORLD WAR

#### THE LOVE OF AN UNKNOWN SOLDIER

A Manuscript Found in a Dug-out

Cloth, \$1.25 net

In the trenches a soldier wrote his heart on paper, then vanished. How? No one knows, but he left behind this intimate document—a confession of extraordinary importance to some American girl. Who is she—and where? We publish this secret autobiography in the hope that its message may reach her. The most intriguing mystery, from a literary standpoint, that the war has produced.

#### OUT TO WIN

By LT. CONINGSBY DAWSON, author of "Carry On, The Glory of the Trenches," etc.  
Third Edition. Cloth, \$1.25 net

A vivid, prophetic, optimistic and inspiring statement of America's accomplishments in France.

#### GONE ASTRAY

Leaves from an Emperor's Diary

Cloth, \$1.50 net.

Whether viewed from the standpoint of a personal document or the result of a lifelong study by a marvelously gifted student of character, this story of the Kaiser's obsession for world domination, from boyhood to the present day, is both timely and illuminating.

#### PUSHING WATER

By LT. ERIC P. DAWSON, R.N.V.R.

Frontispiece. Cloth, \$1.00 net.

The story of the British Auxiliary Patrol—the navy of small craft, the brooms and eyes of the Grand Fleet.

#### ROUMANIA

By MRS. WILL GORDON, F.R.G.S.

Profusely illustrated. Cloth, \$3.00 net.

A wonderfully interesting history of Roumania, past and present, with an introduction and two chapters by H. M. Queen Marie.

#### ASIA MINOR

By WALTER A. HAWLEY, author of "Oriental Rugs," etc. Illustrated. Cloth, \$3.50 net.

An interesting and informing account of that little-known part of the Near East—Asia Minor which is destined to occupy an important place in the activities of the world.

### OF GENERAL INTEREST

#### RUPERT BROOKE

A Memoir by EDWARD MARSH

Frontispiece Portrait. Cloth, \$1.25 net.

The official memoir of this celebrated poet containing many hitherto unpublished letters and a few poems not previously printed.

#### SKETCHES IN DUNELAND

By EARL H. REED, Author of "The Dune Country," etc. Illustrated. Cloth, \$2.50 net.

A really beautiful book of drawings and appreciations of the wonderland of sand on the wild coasts of Lake Michigan.

#### FAMOUS PICTURES OF REAL ANIMALS

By LORINDA M. BRYANT, author of "American Pictures and Their Painters," etc.

Profusely illustrated. Cloth, \$1.50 net.

A companion volume to Mrs. Bryant's popular "Famous Pictures of Real Boys and Girls."

### WAR FICTION

#### THE ROUGH ROAD

By W. J. LOCKE, author of "The Red Planet," etc. Fourth Edition. Cloth, \$1.50 net.

A truly Lockean romance of youth and the Great War. The most popular novel of the season.

#### TOWARDS MORNING

By IDA A. R. WYLIE, author of "The Shining Heights," etc. Fourth Edition. Cloth, \$1.50 net.

A remarkably powerful story of a boy's soul seared by the brutal hand of Prussianism.

#### THE WAR EAGLE

By W. J. DAWSON, author of "The Father of a Soldier," etc. Second Edition. Cloth, \$1.50 net.

A dramatic, finely written and conceived story embodying a record of the first year of the war.

OF ALL BOOKSELLERS

JOHN LANE CO. NEW YORK

which has all the zest of the old-time variety of treasure story and all the appeal of the typical boy's book.

THE PIRATE OF JASTER PEAK, by Adair Aldon. (Macmillan Co., \$1.35.) Juvenile adventure story of Hugh Arnold's search for his two friends lost in the forests of the Northwest.

UNCLE JOE'S LINCOLN, by Edward A. Steiner. (Fleming H. Revell Co., \$1.) An old Hungarian who fought in our Civil War returns to his native town and fires all the small boys with stories of his beloved Lincoln.

THE BIG GAME, by Lawrence Perry. (Scribner's Sons, \$1.35.) Another story of live-wire school athletics by "Fair Play." Football is the theme. The story keeps the reader as interested as if he were playing the game himself.

THE BOYS' BOOK OF CHEMISTRY, by Charles Ramsay Clarke. (E. P. Dutton & Co., \$2.) Written in a more informal style but otherwise not essentially different from various other elementary text books and laboratory guides.

YOUNG ALASKANS IN THE FAR NORTH, by Emerson Hough. (Harper & Bros., \$1.25.) A thrilling story of exploring in the Yukon and Klondike region. Cramped with adventure and daring exploits—full of appeal to youth.

LOST INDIAN MAGIC, by Grace and Karl Moon. (Frederick A. Stokes Co., \$1.50.) A tale of adventure, based on a legend of the Southwestern Indians, and so filled with action, mystery and color as to delight young readers nine to fifteen.

THE FIGHTING MASCOT, by Tommy Kehoe. (Dodd, Mead & Co., \$1.35.) Written primarily for boys, this account of the actual war experiences of the youngest soldier in the trenches has a thrill and an appeal for every lover of courage, self-sacrifice, and of the spirit of youth.

SCOUTING WITH GENERAL PERSHING, by Everett Tomlinson. (Doubleday, Page & Co., \$1.35.) Scouting, not in France but in Mexico and the Southwest during the Border troubles of 1916, is the theme of this boys' book. Full of adventure, with a dash of German intrigue in Mexico.

WORKING MY WAY AROUND THE WORLD, by Harry A. Franck. (Century Co., \$1.35.) This reproduction loses none of its original freshness and vigor by being abridged. Thus planned to appeal to younger readers, it will give them many hours of entertainment.

THE BOY HIKERS, by Chelsea Curtis Fraser. (Thomas Y. Crowell Co., \$1.25.) Eight boys "hike" from Pennsylvania to New York City, enjoying en route adventures varying from patriotically gratuitous farm work to the capture of a German spy. Boys 10 to 16.

UNDER ORDERS, by Harold S. Latham. (Macmillan Co., \$1.35.) A lively story of a Boy's Club with its comradeship, idealism, and capacity to train boys for citizenship by finding outlets for energy along lines of service to the community.

### For the Young Children

A LITTLE BOY LOST, by W. H. Hudson. (Alfred A. Knopf, \$1.50.) The autobiography of a boy that loved outdoors, by a famous author who remembered his own boyhood fancies and adventures.

LITTLE MISS GRASSHOPPER, by Johanna Spyri. (T. Y. Crowell Co., 50 cents.) A delightful little story with an Alpine setting, by the author of "Heidi." Told with the same charm as her previous books.

THE TURQUOISE STORY BOOK, by Ada and Eleanor Skinner. (Duffield & Co., \$1.75.) Collection for young readers of stories, legends and poems about summer and nature. Third volume in a series of nature books.

STAR STORIES FOR LITTLE FOLK, by Gertrude Chandler Warner. (Pilgrim Press, 50 cents.) Something novel in instructive literature for children. Lessons in which the locating of the stars is made an absorbing game.

THE BOY WHO KNEW WHAT THE BIRDS SAID, by Padriac Colum, illustrated by Dugald Stewart Walker. (Macmillan Co., \$1.50.) Irish folk-lore tales of giants and birds and fairies, written and illustrated in delightfully fantastic style.

THE BOOK OF NONSENSE, by Edward Lear. (Thomas Y. Crowell Co., 50 cents.) A new edition of the old, favorite, nonsense rimes; designed for children, these delicious absurdities never fail to charm the "grown-ups" as well.

INSECT ADVENTURES, by J. Henri Fabre. (World Book Co., Yonkers, N. Y., \$1.) A selection of the most adaptable of that famous scientist's well-known studies of insects, retold for young people by Louise Seymour Hasbrouck.

THE JOLLY BOOK OF FUNCRAFT, by Patten Beard. (Frederick A. Stokes Co., \$1.50.) A book containing any number of jolly games for little people and new ways of having "truly fun" with small trouble and less expense. Children 5 to 12.

MOTHER WEST WIND "WHERE" STORIES, by Thornton W. Burgess. (Little, Brown & Co., \$1.) Fanciful animal tales for children four to twelve in which Peter Rabbit learns much of interest, including where Mr. Gobbler got the

## By Their Fruits

"By their fruits ye shall know them."

One of the fruits of Christian Science is

The Christian Science Monitor  
An International Daily Newspaper

Here you see the power and value of Truth and Principle applied to the affairs of the whole world.

You see a newspaper without sensationalism, gossip, unsavory details, exaggeration or falseness. And yet—or rather because of it—a highly interesting and edifying newspaper. The Monitor is all the more interesting because its readers know that what they read is true, and therefore has a real bearing upon their thought and lives.

The Christian Science Monitor is \$9.00 a year by mail, or may be obtained at news stands, hotels and Christian Science reading-rooms. A monthly trial subscription by mail anywhere in the world for 75c; a single copy for 3c stamp.

PUBLISHING SOCIETY

BOSTON U. S. A.

Sole publishers of all authorized  
Christian Science literature

### RIISING JAPAN

An eminent Japanese scholar writes from Tokyo that he regards Dr. J. T. Sunderland's *Rising Japan* (G. P. Putnam's Sons, \$1.25) as distinctly the best book on Japanese civilization, the aims and ideals of the Japanese nation, and the relations of Japan with America, that has appeared from any pen. He asks permission to translate it into Japanese.

The *London Times* devotes two columns to the book, giving it high praise and urging its wide reading in England as well as in America.

## The Origin of the Bible

(The Bible in the Light of Modern Knowledge)

By J. T. SUNDERLAND, M.A., D.D.

The BEACON PRESS, Boston, pp. 288, \$1.20 net

The Librarian of one of the largest Public Libraries in America writes: "For some years I have taken special pains to secure for our shelves all the books of real value on the Bible that have been published in this country or England, and I want to say that in my judgment Dr. Sunderland's work is the best that has appeared from the pen of any scholar. I recommend it above all others."

## How to Use The Independent in the Teaching of Civics

By SIMON I. JUMNEFSKY, A.B., LL.B.

Teachers, write for it and it will be sent free.

The Independent, 119 W. 40th St., N. Y.

strutting habit. Charminglly illustrated in color by Harrison Cady.

THE LOYALTY OF ELIZABETH BESS, by E. C. Scott. (Macmillan Co., \$1.35.) The delightful pranks and pastimes of a little Southern girl of the late sixties. For girls eight to fifteen.

LITTLE ALLIES, by Beatrice Forbes-Robertson Hale. (Frederick A. Stokes Co., \$1.50.) A jolly tale of adventures in patriotism of three New Yorkers and a little French visitor. Illustrations in color by Alice Beard.

IN THE DAYS OF THE GUILD, by L. Lamprey. (Frederick A. Stokes Co., \$1.50.) A book full of the romantic flavor of "Merrie England" of the old days. Fact, fiction and poetry so blended as to delight young people ten to sixteen.

THE JOLLY SHIPLEYS, by Elizabeth Price. (Pilgrim Press, Boston, \$1.25.) A wholesome story of home life concerning the influence of the six Shipley children on a wealthy neighbor's son. For boys and girls ten to fifteen years.

ONCE UPON A TIME ANIMAL STORIES, by Carolyn Sherwin Bailey. (Milton Bradley Co., Springfield, Mass.) Entertaining stories for young children, attributing human impulses and conduct to the animal world, and indirectly, pointing a moral.

THE BOOK OF ELVES AND FAIRIES, by Frances Jenkins Olcott, illustrated by Milo Winter. (Houghton, Mifflin Co., \$2.) The best fairy tales of all nations and ages, retold with a charm that appeals to all, the young folks and their elders, too.

NATURE STORIES TO TELL TO CHILDREN, by H. Waddingham Sears. (Dodd, Mead & Co., \$1.25.) Nature tales which have a real value in that they combine useful, if simple, facts of plant and animal life with enough of the "story" element to stimulate youthful imaginations.

OVER INDIAN AND ANIMAL TRAILS, by Jean M. Thompson. (Frederick A. Stokes Co., \$2.) A book about Indians and animals, with colored pictures by Paul Bransom—what more could any child-heart desire? A great deal of natural history will be imbibed in the reading of it.

OUR HUMBLE HELPERS, by John Henri Fabre, translated by Florence Constable Bicknell. (Century Co., \$2.) Familiar talks on our domestic animals by the late eminent scientist. While mainly written for children, contains much that will inform and interest the older members of the family.

## Stories Girls will Like

TALES FROM SHAKESPEARE, by Charles and Mary Lamb. (T. Y. Crowell Co., \$2.) A new edition of an old favorite, delightfully illustrated with sixteen pictures in color by Gertrude D. Hammond.

TWIN TRAVELERS IN SOUTH AMERICA, by Mary H. Wade. (Frederick A. Stokes Co., \$2.) A story-book journey thru "the other America" for boys and girls between eight and thirteen years of age.

ISABEL CARLETON'S FRIENDS, by Margaret Ashmun. (Macmillan Co., \$1.35.) Another chapter in the happy life of a very real and charming young heroine. Delightful reading for girls fourteen to twenty.

L'HOMME VERT, by Jetta S. Wolff. (E. P. Dutton & Co., 65 cents.) Ten short stories for young people, written in elementary French, and intended primarily as a supplement to a text book. One of the Modern Language Series.

A GIRL SCOUT OF RED ROSE TROOP, by Amy E. Blanchard. (W. A. Wilde Co.) This well-known writer for girls has produced another of her lively stories. Any one interested in Girl Scout activities will find them here entertainingly described.

HALF MERILL'S HONEY QUEST, by Annie Elizabeth Harris. (Lothrop, Lee & Shepard Co., \$1.35.) The story of a girl of fourteen, who, placed in a lonely situation, set her whole bright will to the conquering thereof, with a reward beyond her fondest dreams.

## Fiction for Grown-Ups

CAMILIA, by Elizabeth Robins. (Dodd, Mead & Co., \$1.50.) The love story of an American divorcee and an English nobleman. The character delineation is particularly interesting.

HELS OF TRY and Rost, by Phyllis Bottome. (Century Co., \$1.35.) Two delightful stories of Russian women and their men folk, written with rare insight into feminine psychology, by the author of "The Dark Tower."

WE OUTRAN, by Henri Barbusse. (E. P. Dutton & Co., \$1.50.) In the ordinary course of time as things become confused, furnish the motif of these fifty short stories, passionate, vivid, sometimes incomprehensible, by the author of "Under Fire."

THIRTY-THREE AND A HALF HOURS' LEAVE, by Mary Roberts Rinehart. (Doran Co., 60 cents.) When the hero comes back from colors makes a hot "catch out." The adventures that his eager heart on Sergeant Gray fill the most entertaining war story Mrs. Rinehart has written.

# Books for Your Christmas Gifts

## "All Star Fiction"

### Out of the Silences

By MARY E. WALLER

Author of *The Wood-carver of 'Lympus*

A virile romance of the present day with its scenes laid in Canada. The plot is original and is worked out with the same skill that gave "The Wood-carver of 'Lympus" and "A Cry in the Wilderness" such a strong and popular appeal.

"Miss Waller has done no better work . . . it is an epic in prose."—*New York Tribune*. \$1.50 net

### Our Admirable Betty

By JEFFERY FARNOL

Author of *The Broad Highway*

A joyous and vigorous romance of the period of "The Broad Highway."

Bewitching Betty is one of the most adorable of heroines, Sergeant Zebadee is a whimsical character who adds humor to the tale, while Major d'Arcy is as delightful as any hero that Farnol has created. "Mr. Farnol has seldom written in happier vein."—*Boston Transcript*. \$1.60 net

## Books on the Drama

MOTION PICTURE PRESS  
AGENT

(Continued from page 326)

Where were they? Some one suggested that "Society" does not show up until 8:30 or nine o'clock. We waited patiently. The crowd of pass holders now began to make their appearance, intermingled with an occasional purchaser. There were few carriages, possibly two dozen couples in evening dress, the others all in street clothes. By nine o'clock it had dawned on the most obtuse that the Four Hundred had stayed away but had sent its cooks, grooms, waiting maids and butlers!

Brutus remained sanguine, as befitted an exponent of New Thought. "It will take five or six weeks to get them coming," he explained. "Anyhow, Society isn't back in town yet—we shouldn't have issued our invitation so early." It was the fact, however, that we didn't sell a hundred of our \$3 seats thruout the entire season, nor did "Society" ever show up in any numbers. Catiline, clever adsmith tho he was, had fooled himself and us on the amusement psychology of the millionaire who likes to take the movies incognito and reserves display for the opera. Plain, ordinary people were scared away by the stiff prices.

Brutus stuck it out for months to constantly diminishing receipts which at the end scarcely paid the weekly rent. Then in disgust he turned the management of the theater over to a Broadway personage who is fond of styling himself the "Go-Git-Em Guy." The latter cut the prices to twenty-five and fifty cents, camouflaged the lobby, decorated the stage, trimmed the pictures, and introduced warblers of popular ditties. These innovations set the business soaring, and the remainder of the season was on at least a partly self-supporting basis.

The happenings recorded above would have proved a tragedy to a theatrical showman who must necessarily create an immediate demand for his goods or close up shop. With the large film corporation, however, the New York opening is "window dressing." Success or non-success of its rented Broadway theater is after all a minor matter compared to the national and world-wide distribution of its films. Armed with the sincere laudations given to our weekly output by the metropolitan critics, we address ourselves to the country at large. Sales branches were established in all the important cities, contracts were entered into with thousands of little and big picture houses, and from Oshkosh to San Antonio and from Bangor to Aberdeen signs like this were emblazoned on their fronts:

MONTEZUMA PICTURES  
THE KIND YOU PAY \$3 FOR IN  
NEW YORK CITY  
HERE—10 CENTS!

As the innumerable contracts rolled in, each accompanied by a request for a regular supply of photographs and press matter, I entered on a wholesale publicity distribution that put in the shade all my previous efforts. The press department was now a sweatshop in which all hands feverishly penned, typewrote and assembled a vast product of words. Our press sheets were printed in five thousand lots, and our current stock of 25,000 photographs was weekly drawn upon for shipments to the four quarters of the compass. We entered into correspondence with London, Paris, Rome, Calcutta, Tokio, Buenos Aires, Melbourne and other remote centers. We handled anything from selling a star's photo to an individual motion picture fan to landing a whole page of Montezuma publicity in the Cleveland Leader or the New Orleans Item.

## "No Other Man"

says Theodore Roosevelt, "can quite parallel the work that Mr. Simonds has done. It is hard to say what most to admire; the really extraordinary grasp of the essential facts of the war which is shown; or the transparent clearness with which the facts are brought out; or the entire fairness and impartiality of the conclusions," which one finds in

FRANK H. SIMONDS'  
History of the World War

Since the day in July, 1914, when one flaming editorial of Frank H. Simonds started New York, his fame has stretched around the world.

He is read by European general staffs. He is welcomed by President Poincare and by Lloyd George. He is the one great historian whom this war has developed.

And because Frank H. Simonds has become so great, the whole world is eager to help him with the writing of this story. Therefore those who know best some individual part of the great conflict—those who have played a part in it—have written of what they know best. There are hundreds of those contributors. One-third of the whole history is written by them—the other two-thirds being written by Frank H. Simonds. They are the flashes of light illuminating the tapestry he weaves.

## Two Volumes Now Ready

A Low Price Until the Books Are Finished

The price of paper will go up again very soon. So to those who help us put in our paper order at once—by ordering a set now—before completion—we make a special low price.

Send the coupon today for a set at the low before-publication price. You will get the first two volumes on approval and you will get each other volume as soon as it comes out. In the history of this nation or of the world there has never been a war like this.

You must know the truth about this stupendous thing. You must see into its heart.

You who live in this generation must own this work—you who have an opportunity to save money on it must not miss this chance.

REVIEW OF REVIEWS COMPANY  
30 IRVING PLACE NEW YORK

ROXBURGH PUBLISHING CO., Inc.  
61 Court Street, Boston, Mass.

Another publication begins to furnish the teaching, instruction and information for

**Sunday School Teachers and Scholars**

W. A. WILDE COMPANY  
120 Bayview Street, Boston, Mass.

With the approach of New Year's the first black clouds appeared on the horizon. An omen of this was when the telephone company cut off our service, sending the president hurrying downtown for cash to meet the bill. Trade editors greeted me with doubtful welcome, declaring the "ad" bills long overdue and stating their disinclination to pasture a "dead one" with free publicity. Next, a tidal wave of economy struck the office. Heads were lopped off in every direction, private telephoning was forbidden, vouchers were scrutinized, and expenditure was curtailed. Gossip was rife on the street that we would soon go bankrupt. Nevertheless Brutus got another firm of very powerful Wall Street magnates interested, and we continued to plod on.

How came Montezuma so near to wreckage after only five months of operation? Sales were tremendous; the films were displacing those of older concerns everywhere. The first reason was the staggering expense of conducting twenty-eight separate branch distributing businesses in as many cities, together with the home office "overhead." The second reason, equally important, was the contract entered into with the studio producers by which we paid them at the rate of \$40,000 for every long picture and \$20,000 for each short one—about \$6,000,000 per annum. The highly famed directors had named their own figure, and it was breaking Montezuma's back. Grandiose ideas of production ruled everybody. A sub-director would be getting \$25,000 a year, and even featured players would receive a moiety of that amount. The most expensive locations were rented, yachts and railroad trains were chartered, free automobiles were for everybody, elaborately built structures were fired and shipping was blown up to provide a 200-foot flash in a 5000-foot picture.

I shall not bother the reader with the detailed after-history of Montezuma in its stock market ups and downs, its quarrels with the directors, and its kaleidoscopic changes of management. A year and a half later it was bruited about that the parent corporation owed one of the studio producers \$800,000 and another one \$600,000. The huge returns they had counted on simply weren't in the business, and they were obliged to get out. Went, too, all the high-priced stars, the fancy-salaried home officials, and the whole blind system of production waste. The Montezuma makes "cheap" pictures now; the financiers in charge would shy at a famous stellar name as they would at the Kaiser's.

As to the "old gang," most of them are widely scattered. The directors-general found a rival corporation willing to pay them big prices for their work, tho under a reduced scale of production and with fewer companies. The Healer has returned to his healing, Catiline to his advertising desk, and Brutus busies himself with a production company, while the "Go-Get-Em Guy" has built theaters, established an exhibitors' circuit, and is reputed to draw a princely salary as an adviser in chief to a prominent film maker. Long since I became an independent scribbler.

The gigantic, rapidly shifting and (if I may so call it) mushroom character of film enterprise is illustrated by the brief history I have been recounting. As a highly speculative and hazardous game, it far outclasses the old-time theater with the latter's solid foundation of theater syndicates and proprietorship. Nobody can corner the 12,000 picture theaters of the United States, just as nobody can corner producing talent, and so I think that the future of the films will ever present new and unexpected angles to the fascinated observer.

(To be concluded in a later issue)

## AMERICA'S OWN

## WAR BOOK

# MY COMPANY

By Captain Carroll Swan

The first account by an American officer of the great Allied Victory Drive and of the splendid part played by American lads in the German defeat. Captain Swan of the Yankee Division tells all about the boys under his command, describing their exploits, adventures, everyday lives and magnificent morale. It's a thrilling story and proud record of pluck and efficiency. Every American should read it. 24 illustrations. \$1.50 net.

## LIFE AND LETTERS OF JOEL CHANDLER HARRIS

By Julia Collier Harris. "The author has achieved something like a veritable masterpiece. . . . It is indeed, precisely such a biography as Harris ought to have—a fitting memorial to a man who gave much gladness to the world."—*New York Tribune*. Illustrated. \$3.50 net.

## THE EDUCATION OF HENRY ADAMS

"One of the most entrancing books of the year and of the century. The entertaining incidents, the dramatic narrative, the sparkling wit, the pervasive humor and the indescribably keen analysis of innumerable interesting personalities make this autobiography a veritable treasure house of joy to the general reader."—*New York Tribune*. \$5.00 net.

## THE DEVELOPMENT OF THE UNITED STATES

By Max Farrand. "Professor Farrand has written a very unusual book . . . such as has not hitherto appeared dealing with American history. . . . A delightful book to read, and a most illuminating and instructive book to study."—Theodore Roosevelt, in *The Outlook*. \$1.50 net.

## SILVER LINING

By R. W. F. The first account of the experiences of an American war bride. Every word rings true. 60 cents net.

## STEEP TRAILS

By John Muir. "No one who loves the out-of-doors should fail to read this volume."—*Cleveland Plain Dealer*. Illustrated. \$3.00 net.

## THE JOYS OF BEING A WOMAN

By Winifred Kirkland. "Essays written with such charm and humor that they cannot fail to delight."—*Baltimore Sun*. An ideal gift for almost any woman. \$1.50 net.

## UNCLE REMUS RETURNS

By Joel Chandler Harris. Ten newly discovered Uncle Remus stories showing "Brer Rabbit" at his funniest. A perfect gift for children. Illustrated. \$1.35 net.

## THE FRENCH TWINS

By Lucy Fitch Perkins. Pierre and Pierrette live underground in shell-torn Rheims. The best book yet in the Twins series. Charming illustrations. \$1.25 net.

## "I AM AN AMERICAN"

By Sara Cone Bryant. Tells children why this should be their proudest boast. Every American child should have this book. Illustrated. \$1.25 net.

Cleland B. McAfee, D.D., L.L.D.

TEN men, all members of one religious body, all living in the same city, were invited to contribute a recently preached sermon to be incorporated in a book of war sermons, in order that uninformed critics might discover how alert the pulpits are to the exigencies of the hour; that bewildered people might be directed toward a straight path, and that preachers who have not as yet been able to formulate their convictions might be helped to a clear and compelling message.—From the Foreword.

## WHAT THE WAR MEANT TO THE U-BOAT

(Continued from page 322)

lanes along which the U boat blunders like a blind fish; the mine fields, both British and German, it must avoid; floating mines that have broken from their moorings; the treacherous tides, traps, decoys, nets, that make a U boat journey a blind hazard.

To these special risks have to be added the usual sea dangers, and the war risks—the "blimps," hydroplanes dropping their bombs from the sky, the little patrol boats, and finally, the destroyer, which remains the U-boat's chief foe.

There are also decided limitations in submarine navigation and operation. The popular idea of a U-boat emerging and diving again with porpoise ease is quite erroneous. If she attempts to go down at an angle of more than twelve degrees, her battery tanks overflow, leaving her a helpless, floating hulk. Abrupt dives are also very dangerous. A submarine commander told me that his hair had often stood on end when, on a quick dive, his vessel went down and down till he thought he could never stop her. Doubtless, many a U-boat has gone headlong into the deeps where the terrific pressure would crash her iron sides like an egg shell. Once on the surface, a large U-boat would require several minutes to submerge, and if she were seen by a destroyer, her fate was sealed; for no matter what depth she might go, the telltale wake floats up to the surface. A depth mine dropt at its head closes the incident.

Neither can a U-boat cruise indefinitely under water. Seventy to one hundred miles is about the limit. After that it must come up to recharge its batteries while steaming along the surface.

Surface cruising also has its limits. At low speeds a submarine's radius runs up to six or seven thousand miles, but a good deal of this mileage is used up in coming and going between the hunting grounds and the base, and if much high speed work is done in long stern chases after fleeing merchant vessels the mileage is further cut down. A U-boat can stay away from its base between twenty and twenty-five days.

To extend this time limit many attempts were made to establish supply bases in the hunting waters. Food could be obtained, of course, from captured ships; but fuel came less easily. One ingenious commander used to cache barrels of fuel oil and petrol, loot from tankers, at the bottom of the sea in a sheltered cove. But one day an insignificant marker buoy in the middle of an "oil spot" betrayed him. The customary procedure would have been to carry off the barrels; but, with a flash of genius, the British commander removed the bungs, poured a few gallons of picric acid, a powerful explosive, into each barrel, then sunk them again. In racing automobiles a few drops of picric acid is sometimes added to the petrol to give it a "kick," but it has to be done very carefully or the engine is liable to be wrecked; so it does not require very much imagination to picture the fate of that particular U-boat.

Summing up the U-boat's potentialities, we find that it is limited in cruising radius and operations; is exposed to extra sea and war risks; is, in fact, a hunted creature. The loss of the vessels, it should be remembered, was aggravated by that of the torpedoes they carried. The smaller boats usually carried ten; the larger and later types about twenty. Now a torpedo is an extremely complex piece of mechanism that takes months of time and thousands of dollars to build. Accordingly, if a U boat was sunk outward bound with twenty torpedoes, their loss was more serious than that of the vessel.

## MARSHAL FERDINAND FOCH

(Continued from page 339)

been on the verge of defeat. General Foch realized that his country was in great need.

General Foch arrived at the Marne sector just in time to find a lieutenant, whom he had asked to work on his new staff. Heretofore, the lieutenant had been serving on General Joffre's staff, and happy to work once more with his former director of the War School, became a devoted aide of the new army commander.

Lieutenant André Tardieu had the patriotic joy of seeing General Foch make his immortal offensive against the Prussian guard, with the help of Grossetti and of the Moorish troops.

After the victories of Nancy and of the Marne, General Foch took the command of the French armies of the northeast: from Doullens, then from French Flanders, General Foch, still accompanied by Lieutenant Tardieu, succeeded in checking the German rush to the seacoast, and will remain famous in the war's history by his perfect understanding with the new great British armies and with Kitchener, French and Haig.

Foch was also the executive brain of the bloody battle of Ypres. Knowing the high value and spirit of his commanders, Generals Grossetti, Balfourier, Dubois, Humbert, he was unceasingly in close co-operation with the British and Belgian staffs, planning new operations, and next to his marvelous deeds of Nancy and of La Marne, Ypres, Dixmude will always be associated with the name of Foch.

Like Castelnau, keeping his calmness in spite of three beloved sons killed, like Pouydraguin, losing his two sons, General Foch was winning the battles of humanity, trying to forget that in the rear, an heroic mother of France, Madame Foch, was already in mourning for their only son, a courageous, splendid second lieutenant of St. Cyr, and for one of their two sons-in-law, a brave among the brave, Captain Becourt, of Nancy, killed at the head of his Twenty-sixth battalion of Blue Devils, around the iron mines of French Lorraine.

General Foch has always, in the worst of his deep grief, continued to serve his country.

At sixty-seven years of age he has adapted himself to these four years of war, and he has been the supreme and victorious leader of all allied armies on the ravaged soil of France.

General Petain, whom General Foch admires, is his worthy assistant. With leaders like Foch and Petain, the allied troops and the French armies have won the greatest victory of history.

After having served bravely as captain of Chasseurs, Foch's lieutenant, Mr. André Tardieu, became last year French High Commissioner to the United States, where with the American departments he had organized the absolute coördination of the military, naval and economic resources.

A former lieutenant colonel of the Fifth Hussars of Nancy, General Weygand, whom Foch highly appreciated before the war, represented France and General Foch at the Inter Allied War Council of Versailles.

And, touching symbol of Franco-American unity about Alsace-Lorraine, the general impulse of President Wilson induced General Pershing, whose family left Alsace two centuries ago, to come to this country, to offer his soldiers the flower of America, to General Foch, an alumnus and adopted son of Metz, savior of Nancy and of Lorraine.

## THE ONE SUPERB CHRISTMAS GIFT

THE DICTIONARY tells us that a *gift* is to *help* the one receiving it; that a present *does honor* to the recipient or *expresses friendly feeling*.

Begin now to solve your Yule-tide problem by heading your holiday list with something which is both *gift* and *present*—something which *helps*, which *does honor*, which is certainly convincing evidence of *friendly feeling*; which is a compliment to your intelligence as a donor and which is an evidence of your appreciation of the intelligence of the recipient. That something is

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

*TO THE TEACHER:* Ask every pupil to read  
as much of *The Independent* as possible, and to  
prepare at home written answers to two or three  
questions. When you call upon a pupil in class  
ask the pupil to step to the front of the room,  
to lay the written answer on the teacher's desk,  
and to speak without notes, unless notes are  
specifically suggested by the question. Then call  
for one supporting opinion concerning the  
thought presented, and for one dissenting opin-  
ion. Close the discussion by a vote of the class,  
and an expression of your own opinion. Make  
the work spontaneous, spirited, and original.  
Build up a vigorous Americanism founded on re-  
liable information concerning present-day events,  
conditions, and thought.

#### I. Work for Young Students.

1. Cut out any five pictures from this number  
of *The Independent* and write an original  
story which these pictures will illustrate.
2. Write a suitable letter based on any adver-  
tisement in *The Independent*.
3. Write a description of any picture in *The  
Independent*.
4. Write an original Christmas story based on  
the page headed "American Made Toys."
5. Tell simply and clearly the story of recent  
events that have taken place in Germany.
6. Imagine that you were a cabin boy on one  
of the British battleships at the time of the  
surrender of the German fleet. Tell your  
story as you might have told it to your  
parents on reaching home.
7. Your Chinese laundryman tells you that he  
has heard there is trouble in China. Give a  
simple explanation of the present Chinese  
situation, assuming that your hearer can  
understand the very simplest English.
8. Give the words that one of your boy friends  
might use in describing a group of Cossacks  
seen at a circus. Answer him by giving an  
account of what Cossacks are now doing in  
Russia.

#### II. Work for More Advanced Students.

1. Show in what ways the news in this num-  
ber of *The Independent* is related to the  
theme of "A Tale of Two Cities."
2. Give the speech that the King of the Bel-  
gians might have made in expressing appre-  
ciation of the work of the Allies.
3. Write a paragraph so ingeniously worded  
that it will emphasize the statistics given  
concerning losses in the war.
4. Draw from this number of *The Independent*  
suitable material for a speech on "True  
Democracy."
5. Give a speech supporting, or opposing, the  
proposition: "The League of Nations should  
insist upon total disarmament."
6. Read aloud Rupert Brooke's poem in "The  
Sensible Thing." (a) What is the thought  
in the first section of the poem? (b) What  
is the thought of the second section? (c)  
How does the poem affect the reader? (d)  
Show in what ways this poem is like beauti-  
ful music produced by a skillful violinist.
7. Choose sides for a contest based on "What  
Do You Know?" When both sides have had  
sufficient preparation hold the contest. The  
teacher should act as judge, and the award  
should go to the side presenting the greater  
number of correct answers.
8. Show the relation between "The Vision of  
Sir Launfal" and the work of doctors in  
English war hospitals.
9. Prove from Hamilton Holt's article that  
the world of today is in some respects bet-  
ter than the world of *Ivanhoe* or *Henry V.*
10. In a tenderly written paragraph in rhythm-  
ical prose—or in verse if you wish—express  
your opinion on either of the following sub-  
jects: (a) Soldiers who sacrificed them-  
selves for civilization; (b) Humanitarian  
spirit toward the wounded.
11. Your father is planning a new house. You  
hear your mother say something about  
closets. Give your father a few brief sug-  
gestions drawn from the article "Closets  
Built to Fit."
12. Imagine that you are to introduce to an  
audience Major Bishop of the British Army.  
Give your speech of introduction, empha-  
sizing the work of British aviators and of  
Major Bishop in particular.
13. Develop the following topic: "Great Crises  
in the Life of Marshal Foch."
14. Give a speech summarizing Marshal Foch's  
noteworthy characteristics.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, I.H.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

#### I. The World in Revolution—"Reconstruc- tion," "The Bolshevik Movement in Germany," "Cossacks Take Kiev," "A Coup d'Etat at Omsk," "Genealogy of Russian Governments," "Civil War in China."

1. "If the Great War had ended as it began  
... the settlement would have been com-  
paratively easy." Under these conditions  
what would have been the settlement if the  
Central Powers had won? If the Allies had  
won?
2. Compare the end of the present war with  
the end of (a) the Napoleonic Wars, (b)  
the Crimean War, (c) the Franco-Prussian  
War, (d) the Russo-Japanese War, (e) the  
Balkan Wars. Why is the present situa-  
tion more complex than that at the end of  
the five wars mentioned?
3. What evidence do you find in the *Story of  
the Week* to justify the statement: "Not  
since the Middle Ages has so large a portion  
of the earth's surface been given over to  
anarchy," etc.?
4. "The German revolution seems to be taking  
the same course as the Russian." What is  
the evidence in proof of this statement?
5. To what party in Russia does the "Spar-  
tacus" faction correspond? the moderate So-  
cialist faction? the Bourgeois faction?
6. "In southern and Catholic Germany the  
radical views do not meet with the same  
acceptance," etc. Why not?
7. Trace the history of the revolutionary move-  
ment in Ukraine. In Great Russia. In Si-  
beria. Do you see any evidence of the estab-  
lishment of permanent governments in these  
regions?
8. What relation has the present civil war in  
China to the interference of Japan in that  
country during the past four years?
9. What claims and counterclaims will China  
and Japan probably make at the coming  
peace conference? How will these claims  
probably be settled?

#### II. The Glory and the Tragedy of War—"Britannia Rules the Air," "What the War Meant to the U-Boat," "Four English Hospitals."

1. Upon the basis of the first article and of  
any other available sources write an account  
of the achievements of the aerial service  
of England, France and Germany. An ac-  
count of the exploits of Guynemer, von  
Richthofen, Bishop or some other "ace."
2. What are the advantages and the disadvan-  
tages under which the submarines operated  
during the war?
3. "If this be true, the question naturally  
arises—why were merchant ships ever al-  
lowed to go out alone?" Answer.
4. What feelings does Mr. Holt's article arouse  
in you?

#### III. Military Preparedness or Disarmament —"National and International Pre- paredness."

1. "... the very cornerstone of a League of  
Nations must be total disarmament." What  
is the ground upon which the author makes  
this statement?
2. "The people ... are sick of the whole  
business; but the political men and many  
of the great business men ... still believe  
that their only security is in the develop-  
ment of organized forces." How do you ac-  
count for this difference?
3. Do you agree with the writer's summary of  
the situation as given in the last sentence  
of the editorial?

#### IV. The Peace Conference—"The President on the Firing Line."

1. Is *The Independent* in favor of the Presi-  
dent's journey to Europe? Are you?
2. What are the American peace aims? How  
do they differ from those of the European  
powers?
3. Is it possible or desirable for America to  
return to her detached international posi-  
tion?

#### V. Government Control—"Congress," "Navy Control of Wireless," "Return of the Railroads."

1. What evidence do you find in these news  
items that the Administration is working  
for government ownership of transpor-  
tation lines? What evidence of opposition to  
government ownership?
2. Is the sentiment in favor of government  
ownership growing stronger or declining?

## POETS OF TODAY

War and love have always been the themes that poets oftenest embroider; in the experiences of the last four years they have come to dominate our poetry altogether. From the men who fought we have their hot personal reactions of determination, horror and the poignant longing for home contacts. A. Newberry Choyce, a young English lieutenant, writes of them with somewhat the simplicity and flavor of Rupert Brooke's war sonnets. His book of poems, "Memory," is published by John Lane & Co.

### ATTACK AT DAWN

Evening sky  
With gold and carmine glowing.  
Roaring still  
The guns that never rest.  
And I—  
Stifling one wild aching in my breast  
For every flower that's growing  
Upon a homeland hill.

And at the dawn will come  
Death  
To write a roll of fame  
Where crimson blood is flowing;  
While I look on with half-held breath  
And think of Autumn fields at home  
Where poppies are aflame—  
And wonder will he write my name.

"No Man's Land" is a compelling glimpse of the soul-stirring horror that may overtake a soldier:

### NO MAN'S LAND

I crawled in a spirit-haunted place  
Made wild by many a screaming shell.  
And here and there a dead man's face  
Lay like a livid track to Hell.

For Night had spread the jagged lands  
With covering veil of sable skies;  
Yet War still clenched his crimson hands  
And hunted me with gleaming eyes.

I crawled in a spirit-haunted place  
Made wild by souls that moan and mourn;  
And Death leered by with mangled face—  
Ah God, I prayed, I prayed for dawn.

Sometimes it seems that war hurts most far away from the battlefield in the homes where mothers and sisters and wives are waiting for their soldiers to come home. Mary Carolyn Davies, a young American poet, speaks eloquently for them in "The Drums in Our Street," published by the Macmillan Company:

### IN OUR STREET

The war has wakened me to see  
The greatness in the clerk across the way,  
The high nobility  
In my next neighbor whom I never saw  
With anything of awe  
Until I knew her sons had gone—three tall  
And awkward youths. She sings about the  
hall

## CONTENTS FOR DECEMBER 14, 1918 Volume 96, Number 3653

And porch, at sweeping, and is happier  
Than all the town. I sometimes look at her  
And wonder, and wish that I, too, could  
be gay.

The lanky clerk who never seemed to care  
About big things—he went. There was an  
air  
Of being on great projects, in his face,  
A trace  
Of kingliness I'd not have thought of there.  
There were songs within him, tho his lips  
were dumb.

Because of these two, I,  
Tho I am cowardly, try  
To keep from weeping when no letters  
come—

## THE NEW PLAYS

Smiles, tears and tender recollections mingle closely as one watches *Home Again*, founded on James Whitcomb Riley's poems. Tim Murphy as the raggedy man and Macklyn Arbuckle as the fake doctor achieve triumphs, while the children capture every heart. (The Playhouse.)

Cyril Harcourt and Norman Trevor and, indeed, all the cast of *A Place in the Sun* are far too good actors to be wasted on so trivial and trite a piece. There are several conversational sparkles, but the general effect is heavy. (Comedy Theater.)

As refreshing and entertaining as when it was new, and doubly welcome amid much war melodrama is the revival of *Daddy Long Legs*. With Ruth Chatterton and Henry Miller. (Henry Miller's Theater.)

The Gilbert and Sullivan operas given by the Society of American Singers are more than a match for the present day productions both in musicality and in timeliness. The *Mikado* and the *Pirates of Penzance* seem written especially to satirize the follies of today. And modern pseudo-military choruses could learn much from the company of jolly tars in *H. M. S. Pinafore*. (Park Theater.)

With its usual artistic simplicity the French theater this week gives a forceful presentation of Ibsen's *Rosmersholm*. (French Theatre du Vieux Colombier.)

Jane Cowl is the actress *par excellence* of tears and hysterical emotion. As an American telephone girl on the battlefield her ability finds full scope in *The Crowded Hour*. (Selwyn Theater.)

## REMARKABLE REMARKS

**LORD BERESFORD**—The peace must be signed in Berlin.

**THE EX-CROWN PRINCE**—I have not renounced anything.

**EX-KAISER**—America must be punished for her actions.

**DR. SOLE**—In England a haughty spirit of victory prevails.

**CHARLIE CHAPLIN**—There is such a thing as being too funny.

**SECRETARY MCADOO**—I would not turn my hand over for any office.

**H. S. MENCKEN**—Women take a heavy, unhealthy pleasure in suffering.

**CHARLES E. HUGHES**—In saving the world we have lost our republic.

**HORATIO BOTTOMLEY**—Germany should be subjected to a period of economic slavery until she has paid an indemnity of \$50,000,000,000.

**SECRETARY REDFIELD**—If it is permitted me to urge a few words of practical advice to American industry I should say to them, beware of the temptation hastily to lay rash hands upon wages.

**PROF. H. M. KALLEN**—The Bolsheviks most of all have helped to make the war not only a war for democracy, but a war at last of democracy and by democracy.

# How I Learned The Knack of Forceful Speaking

One Man's Accidental Discovery of the Most Potent Power in Business and the Quick Advantage It Gave HIM

An Actual Episode in the Writer's Progress

"LET'S go," said Hill, laying on the desk before me a newspaper clipping. "We're sure to have some fun out of it and meet some of the old crowd."

The item was an open invitation to all former residents of the small city that Charlie Hill and I thought of as our "home town" to attend a get-together dinner of former residents of the place.

I was enthusiastic about it and met Hill on the following Friday evening at the hotel where the meeting had been called. Familiar faces were everywhere even before we got to the banquet room. It seemed as if half of the friendly old town had descended on the hotel in a body.

As we finished dinner the chairman rapped for silence and the crowd quieted down expectantly. Speaker after speaker was applauded generously and each one of them had something interesting to say about people or things back home. Hill, myself and a dozen more in our group were enjoying a regular neighborhood reunion when the blow fell.

"We are further with us tonight."

honored to have began the chairman and continued with a flattering eulogy of the next speaker. I sat listening eagerly for the name, hoping it would be some old friend that I had not yet seen, when he ended up by looking directly at me, calling me by name and with a wave of his hand indicating that I should rise and say something to my fellow townspeople.

I was stunned. I hadn't considered even the possibility of such a thing. I had no idea what to say. A thousand things raced through my mind, none of them appropriate. I tried to think of a story, a reminiscence, an anecdote, anything to carry the thing off and get back in my chair. I rose slowly, hands in my pockets, and opened my mouth to speak, hoping that a kind Providence would send me words to use and thoughts to express.

I hate to recall what followed. It is so painful to me that I have made every effort to forget it. Those few minutes are practically a blank in my mind. Hill, who was sitting next to me, told me afterwards that he could not make much out of my remarks and that, through nervousness, I jingled the keys in my pocket so continually while I was on my feet that it sounded like a sleigh-bell accompaniment. I know that I sat down abruptly in the middle of a word and didn't look up from my coffee cup for many minutes afterward. It was the most embarrassing moment I have ever known in my life.

Worse yet, I had done myself a terrible injustice. I was perfectly able to talk to a group of men and had done so many a time in business, although looking back on it I realize that I had always thought of the right word just a little too late to use it and never quite got the hang of rounding off the last sentence so that the strongest possible impression was left with my hearers. I was just about average when it came to informal speaking. But the "home town" dinner had been the first time I had been expected to stand up without notice and say something in a voice that could be heard by some two hundred people. I shudder to this day as I think of it, yet the greatest good fortune of my career has sprung from that humiliating occasion.

I wanted to apologize to someone for the embarrassment I had caused my hearers that night for I knew they suffered with me in my mumbling monologue. I looked up the man who had been chairman at the meeting—a man who had attained a prominent position in the city of our adoption. He asked me to lunch with him very cordially and when I brought up the subject of the weakness that I had shown he interrupted to say that he was glad I mentioned it.

"Never mind apologizing," he continued. "I was on the point of getting in touch with you when you telephoned. I want to tell you something that I have learned in several active years of business during which I have seen men rise and fall and in most cases I have known the inside causes of their success or failure.

"If some experienced man had told me what I am going to tell you I would have been spared many years of almost fruitless effort. I have found that one of the very cornerstones of success in any line is the ability to talk forcefully, concisely, pleasantly and to the point whether it is to one man or to a thousand. Speech is the most important vehicle of the mind. It doesn't matter what you know if you can't tell it in the right way when the time comes, you might just as well not know it. The very intonation of every word is important. In the modern world personality is the groundwork of progress and personality is chiefly expressed in spoken words. What you say and the way you say it will make or break your career."

Before we parted that day I learned of the work of Doctor Frederick Houk Law, a man who is devoting his life to teaching business men how to talk. He was recommended by the very man who had uncov-

ered my weak point and I got in touch at once with him.

It has only been a few months since I first followed Dr. Law's suggestions but the results that I can definitely trace to them seem incredible to those who do not realize the tremendous power of trained, forceful speech. Last week I addressed a gathering of 3000 people at a rally of our firm's employees. I talked as naturally as I am writing this and the point I urged with my hearers was carried unanimously.

I have learned to secure complete attention to what I was saying; to speak with the right inflection and intonation; to make my words and sentences forceful and convincing; how and when to use humor; how to start a talk, and, perhaps as important as anything, when to stop. For more practical, every day use, I have learned how to give directions, to explain things, to give oral reports, to dictate effective letters, and how to be brief as well as fluent. My vocabulary has enlarged so that I am able to select the exact word I want and use it with confidence.

My income has almost doubled, and at the present rate of increase will soon actually do so. The priceless hint that reached me through that most miserable, embarrassing moment of my life has been worth more than ten years of actual business experience to me and its value grows as my prospects widen.

## Send No Money

There has developed such a wide demand for Dr. Law's help by men and women everywhere that he has written a course in eight easy lessons which any one can easily follow with the same results as from his personal course.

The Independent Corporation is so confident that you will see at once the tremendous value of Dr. Law's Course in "Mastery of Speech" that it is willing to send you the entire course on free examination. Send no money whatever. Simply mail the coupon or write a letter and the complete course will be sent you prepaid. You may send it back any time within five days and you will owe nothing.

If you are pleased with it, as thousands of other men and women have been, send only \$5 in full payment. You take no risk, so mail the coupon now before this offer is withdrawn.

FREDERICK HOUK LAW

### LEARN HOW TO

Make a business proposition interesting. Present plans so they will get attention. Give advertising talks. Give sales talks. Talk when making an application for a position. Make a public appeal. Cultivate fluency in speech. Enlarge your vocabulary. Explain things. Be a leader in every conversation. Avoid expressing annoyance. Irritation, anger, opposition. Be brief. Cultivate ease in speech. Give directions. Give demonstration talks. Talk in selling insurance. Talk in selling investments. Use the hands effectively in speaking. Talk when answering a complaint. Talk when asking for a loan. Talk when offering an excuse. Overcome drawing, lisping, stuttering. Cultivate a pleasant voice. Pronounce difficult words correctly.

## THE DUTY OF THE HOUR

**T**HERE can be no doubt that President Wilson is now at the crisis of his career. Having safely piloted the ship of state thru the direst storm of history, he finds himself compelled to put to sea again on the greatest quest ever undertaken by an American. Breaking the traditions of a century he goes to France to throw the great weight of his personal prestige into the forthcoming parliament of the nations where the course of history will be determined for years to come and where the world, as Mr. Roosevelt has said, will have to abjure half-way measures and decide between Utopia and Hell.

The hour is grave, for now that the pressure of war has been relieved the rats will be venturing out of their holes and selfishness will again begin to stalk abroad. The aristocrats of England, the Bourbons of France, the Machiavellis of Italy and the standpatters of America are already raising the cry of politics and business as usual—the two “processes,” to use the President’s term, that above all else should never continue again “as usual.”

There are rocks ahead at Paris. There are rocks behind at home. The President’s appeal to elect a Democratic house was resented by the country, as the recent election has demonstrated. The announcement of the personnel of his Peace Commission caused bewilderment and disappointment. And now we hear the rumblings in the Senate. Roosevelt and Taft ignored the upper house and their great arbitration treaties came to naught. President Wilson should at least have had a Democratic and a Republican senator with

him on the Peace Commission. The Senate is always jealous of its prerogatives and he would have done well to placate it by concessions. He will need every ounce of support he can get when he comes back with his League of Nations treaty to be ratified.

But the issue in its fundamentals rests squarely upon the American people. The President can be depended on to do all that he can do at the conference. Congress will surely act if the American people unmistakably demand the United States enter a League of Nations. So far our people are favorable to the idea, but they are not as enthusiastic as they should be. They must rouse themselves as the people of Europe have already done.

The next few weeks will be decisive for the future of the world. The League to Enforce Peace, we are glad to hear, will hold conventions all over the country. But that is not enough. Religious, political and educational organizations should make their voices heard. Labor and capital should speak out. The press should expound and it should explain.

Unless our children and our children’s children are to go thru again what we have suffered the world must be organized to prevent future wars thru a League of Free Nations buttressed by every human sanction, moral, economic and military.

There is no other solution. Coöperation will have to be substituted for competition in international affairs if the blood of our heroic dead which now reddens the clay of France shall not have been shed in vain.

## WHEREIN WE WERE PREPARED

**A**MERICA was not prepared for war in any military sense. The creation of a great army in a year and a half and getting half of it overseas was a large achievement in which we may take satisfaction. The navy also was brought into good condition and enlarged, and its performance has been honorable. We hope that the occasion will not arise and we shall doubtless do our part toward bringing about such a reorganization of international relations as will make it less likely to arise, but the experiences of these four years have taught us not to put our trust in hope and not to prophesy.

That we were able to create an army and to be of some substantial use was a consequence of a real preparedness of another kind. So also was our important achievement in helping the Entente Allies to finance the war, in supplying them with munitions before we declared war, and in helping to feed their armies and civilian populations from the beginning. The preparedness which made these things possible was our effective industrial business and intellectual organization with all which that implies of driving power to make it yield results; and these were the splendid products of our individualistic democracy.

No one who had opportunity to see what our engineers accomplished in France could ever doubt that we had developed here a marvelous power to take a critical situation in hand, and to do great things in a material way swiftly and substantially. Other illustrations might be named, but this example is representative of all. The same sort of thing had been done before in building the Panama Canal. In both instances the work was performed under Government authority and control, but the power to do it, the knowledge and the energy, had been developed in our vast private enterprises: in building the most extensive and complex network of railways in the world; in building and rebuilding our commercial and industrial cities; in upbuilding prodigious manufacturing interests, and, most significant of all, in creating our schools, our colleges and universities. Practically all of this achievement had been begun and carried forward by individual initiative and under individual responsibility, and the process had created, as a by-product, a wide-awake, ready, resourceful and self-reliant population.

These are truths not to be forgotten as we now look into the future. Individualism can be a healthy growth, or it can

become rank, disregardful of right, and self-destructive. It can be unfair. It can be narrow and arrogant. It can exploit. And experience has demonstrated that to prevent these tendencies individualism must be offset and held within bounds by various forms and activities of collectivism. Government itself, let us not forget, is collectivism. Law and due process of law, let us ever remember, are collectivism. They exist, and we believe in them and maintain them, because without them individualism becomes anarchism. Experience has demonstrated also that to prosper and be comfortable we must have such works of collectivism as public highways maintained by taxation, instead of by tolls, and public schools, instead of private schools only. Experience has demonstrated also that we must have boards of health and a sanitary administration to some extent restrictive of personal liberty, and that we must protect children and sometimes adults against economic exploitation.

It is probable that we have not reached the expedient limit of collectivism. The experiences of the war indicate that we have not. Nothing has happened, however, to justify the conclusion that we ought now to go over to a socialistic program. On the contrary, a fair review of the facts lead irresistibly to the conclusion that the part that we have been able to take in the war has been respectable precisely because we have thus far been neither anarchistic nor socialistic, but sturdily individualistic; all in all individualistic within reasonable bounds. Any experiment in social reorganization or policy that should result in any impairment of that personal resourcefulness which is, after all, the only possible preparation for the unexpected, would be a supreme disaster.

## SECRECY VERSUS DEMOCRACY

THOSE who protest that we have gained nothing from the overthrow of the German Government since the people have participated equally with their rulers in the iniquities of the war, fail to comprehend that the question is not one of guilt but of security. Doubtless reparation must be exacted from any German Government, however constituted, on behalf of the nations victimized by the war; but the great gain lies in the passing of a great menace.

Democracies, it is true, may be aggressive and unscrupulous; perhaps the German democracy may be so. But it was not only its military resources and lack of moral restraints that made the late German Empire dangerous to its neighbors, there is also a readiness for instant offensive warfare and a capacity for elaborate intrigue impossible in a democracy. Popular government means government by public opinion. You cannot conspire thru a megaphone.

Suppose, for example, that President Wilson should hit on the bright idea of a war of conquest against Spitzbergen. If he followed the German model, all that would be necessary would be to call a midnight conference at the White House with General Pershing, Mr. Baker and a few other of his confederates. If the military chiefs assured him that the army and navy were in readiness he would tell them that he had long desired—in fact ever since three o'clock that afternoon—to make his reign glorious by the conquest of Spitzbergen. He would then call in his private secretary and dictate a proclamation beginning "Spitzbergen has forced the sword into my peace-loving hand. Up and at them!" The navy would sail at six o'clock and every good American would learn with his breakfast coffee that he was a belligerent.

But under our own system of government he would have to proceed differently. A thousand newspapers, one at a time, would have to be converted to the anti-Spitzbergen policy. The President would have to tour the country from end to end to bring the pressure of public sentiment to bear on a timid and irresolute Congress. When the army and

navy increases came up for a vote they would be made the football of politics for six months before a penny was granted. Inconvenient demands would be made for the publication of diplomatic correspondence. Pacifists and Socialists would have time to agitate; bankers would have time to get frightened. By the time the country had been converted to the war policy, Spitzbergen would know all about the American plans, would have rebuilt its navy, introduced compulsory military service, and found formidable allies in Turkestan, Kamschatka and Madagascar. A cat when once let out of the bag, no longer has nine lives!

## SOVIETS AND BOLSHEVIKI

SEVERAL subscribers ask us for "a simple definition of soviet and Bolsheviki." How can one give a simple definition of anything so complex and indefinite as Russian politics? But we will do the best we can to oblige. A soviet is the executive committee of a labor union. The Bolsheviki are the people who are running the Russian soviets. The former is a kind of political machinery derived from industrial organizations. The latter is the particular party now in control of the machinery in Russia. It is the same difference as exists in our own country between governmental institutions and political parties. The Democratic party is not Congress—altho some Democrats seem to think it is. Within a few months the Republicans will be in control, but the Congress will remain as before. So in Russia Lenine, Trotzky and the rest of the gang may be deposed at any time. We have heard every week for over a year that they were about to leave, so it must be so. But the soviet seems to be a very stable institution and might survive their fall or bob up again in some form. It has been adopted in Germany in spite of the fact that the Germans look upon the Russians as utter barbarians from whom they have nothing to learn. And in Germany the soviets are working much more smoothly and efficiently than in Russia in carrying on the revolutionary transformation of politics and industry. But only a few of the German soviets are under the control of the Spartacus faction of Socialists, which corresponds to the Bolsheviki of Russia.

The Bolsheviki are the extremists of socialism, the whole-hoggers, the come-outers, the bitter-enders, the no-compromisers, the intransigents. Those old Russian revolutionists, whom we used to call "Nihilists" and "Anarchists," and whom we used to shudder at even while we sympathized, are looked upon by the Bolsheviki as hopelessly old fashioned and reactionary, no better than we bourgeois republicans or wealthy aristocrats. The present government of Russia is not a democracy and does not profess to be. It is what it calls itself, a dictatorship of the proletariat, the rule of the working class, an inverted autocracy. From all we hear there is as little freedom and less security than under the Czar. The Bolsheviki leaders came into power by violence and maintain themselves by the same means. There are some interesting constructive features in their program, but so far as can be learned they have done little toward carrying them out.

But the soviet as a form of government is not necessarily undemocratic. In fact it has frequently been advocated as more democratic than our system of geographical division. It may take two forms. In one the grouping is by trades; in the other by industries. For instance, in the first all those doing the same sort of work in different establishments would come together and elect representatives to a common assembly as now in a labor convention, where the structural iron riveters', the hod carriers', the school teachers' and the pretzel varnishers' unions are represented according to their numbers. This may be called gild socialism. In the other form all the people in a certain factory, the managers, the clerks, the machinists, the stokers and the cleaners, would unite to elect representatives to the govern-

ing body. This is syndicalism. It is the sort of organization that would exist if all the employees and directors of a plant, but nobody else, had each one share of stock in the corporation. If every one in the community belonged to some trade union or syndicate as is the intention, then obviously the representation would be as democratic as when all the people in Tompkins County or between Fortieth and Sixtieth streets, regardless of occupation, voted as a unit. But evidently the electoral results would be quite different from the same electorate.

The Independent on July 20, 1918, published a long article, "A Primer of Russian Psychology," on the origin of the soviet and the genealogy of the Bolsheviks, and we do not wish to repeat what was so recently said. But we may recall that the soviet or workmen's council first became a political power in the abortive revolution of 1905 and proving effective then was revived in the successful revolution of 1917. The army being the important factor in the movement, the soviet or council of soldiers' delegates had to be admitted. The navy also had to be given representation in the central soviet. Thus the peasants, or some of them, were brought in and finally the combined all Russian soviet of workmen's, soldiers', sailors' and peasants' delegates met and elected a board of People's Commissioners, which has been ever since the real government of Russia. Both forms of representation are practised, the gild and the syndicalist form of socialism, but the tendency is toward the syndicalist type. Apparently any group can form a union and elect its soviet which will be represented in the soviet of soviets. The lawyers would have their union—corresponding to the bar association; the bankers—if they are allowed to exist—would have theirs, but since they would be represented in proportion to their numbers these classes would not exercise as much influence as they now do in politics. Obviously the whole scheme is incoherent and irregular in Russia, but if it is carried out in Germany we shall expect it will be systematized as rigidly as the German army. The soviet idea is obviously very much like what we are familiar with in federated unions, clubs, corporations and associations. What perplexes us is to see these replace the whole system of political machinery that we regard as so essential. The soviet is designed to sweep aside as unnecessary all such things as kings, presidents, parliaments, legislatures, courts, cabinets, capitalists, landlords, employees, armies, nations, classes and boundary lines. We may call this as absurd, as impossible, or as wicked as we please, but since it is just now the only government of a hundred million Russians and fifty million Germans we are obliged to try to understand it.

## THE DANGERS OF PROPHECY

THAT estimable gentleman and cautious statistician, the late Colonel Carroll D. Wright, objected to prophecy, even when he had the figures. He understood, what is no mystery to common sense but is perplexing to enthusiasm, the nice and important distinction between prophecy and scientific prediction: prophecy being only a guess suggested by a part of the facts or by facts carelessly observed or measured, whereas scientific prediction is a conclusion from adequate facts verified as to observation and measured with precision. The good Colonel, as Director of the Census and as Commissioner of Labor, was careful to offer only summaries of his statistical tables that were fully borne out by the data, often to the disappointment of social reformers, tariff builders and campaign managers.

It is therefore one of the grim humors of fate that one of the rare instances in which this prudent intelligence seemed to forget itself and to venture upon prophecy (it didn't really; it only seemed to) stands now as a sensational exhibit of the dangers that really do lurk in prophecy. Incautiously, for once, the Colonel remarked (in print)

that since the municipalities, commonwealths and Federal Government of our nation had organized boards of health we had not been scourged by a nation-wide and uncontrolled epidemic. He did not say that we never should be, but a lot of his readers unwarrantably inferred that he meant as much.

And now we have had the influenza, our old acquaintance that under one name and another has played the mischief with the human race once in about thirty years since the days of the Ptolemies. Of course each generation has imagined that the disease must certainly be a new infliction and has rechristened it. Sixty years ago it was plain influenza. Thirty years ago it was la grippe. And now it is Spanish influenza. But that doesn't matter; by any other name it would have been as distressing and as fatal. The point of our disquisition is that the health administrations have this time let it get out of hand, and it became not only a nation-wide but also a world-wide scourge.

And the "improvement" of our disquisition, as the old rhetoricians would have called it, is that the race of man may as well get ready to scrap a good many prophecies, or near prophecies, that optimism has hugged to its breast as veritable truths. Some of them have failed already. The expectation that a capitalistic world would not permit another first-class war went to smash four years ago. The confident belief that the Hague Convention would mitigate any future war, if one should by mischance occur, is remembered only with shuddering. And to offset these dismal disappointments the prophecy that democracy could not organize itself for war as effectively as absolutism always had done has been pulverized by the American war machine.

To write down a list of other prophecies that are presently to be discredited and forgotten would be to prophesy, which we prudently decline to attempt. But, being human, we may ask questions. Even the President of the United States does that.

We are wondering—just wondering, we insist, and nothing more—if the socialistic prophecy of the impending catastrophe of nationalism, capitalism and individualism will prove to be any nearer a scientific prediction than were some of the forecasts that we have just now named.

We observe, for example, a general disposition among the Entente Allies to agree to President Wilson's proposition that a number of hitherto unorganized nationalities, including of course the Czecho-Slavs and the Jugo-Slavs, must enjoy self-determination. We observe further that England, France, Italy and the United States were never more profoundly national in feeling than they now are while coöperating as military allies. All are willing to enter into a League of Nations, but, we judge, they have no thought of becoming disintegrated elements of any such internationalism as socialism has conceived.

As for capitalism, America like England, has taken possession of railroads and brought industries for war purposes under authoritative control. But we have observed that, simultaneously with these radical departures, the anti-trust legislation has fallen into desuetude, and, in the face of war and its financial exactions small enterprises are being corraled and absorbed by wide-branching and far-reaching organizations carrying on together war industries and peace industries and subsidiary enterprises innumerable. When the normal income tax and the excess profits tax have done their perfect work, shall we discover that the inequalities of economic distribution have in fact been diminished, or only that moderate wealth and a middle class, upon whom financial burdens have ingeniously been shifted, have in great measure been eliminated?

And when the war is all over, shall we "really and truly" enter upon an era of justice and sweet reasonableness in which the exploiter and the slacker shall both be "socialized"? Or, shall we discover that with whetted appetites and undepleted "pep" they have started in to make up for lost time? We cannot predict. We will not prophesy.

# THE STORY OF THE WEEK

## Americans Enter Germany

Early on the morning of December 1 the American troops crossed bridges over the Sauer and Moselle from Luxemburg into Germany. The soldiers were equipped as if for battle, with steel helmets, gas masks, rifles and filled cartridge belts. Heavy artillery followed. Flags were flying and bands playing as they entered upon enemy soil.

The first important place was Treves, an ancient city of about 70,000. The population received the Americans in silence and apparent indifference but no manifest hostility. The soviet or workmen's council which governs the city had published notices in the newspapers urging people to behave properly toward the Americans and not overcharge for goods under pain of punishment. The Americans were surprised to see so many well dressed people and to find that they could get a good dinner at the best restaurants at no higher price than in France. But there is no coffee, little butter, and bread is scarce and poor. Meat, fish and game are to be had for those with money enough. The young children have evidently suffered for lack of milk.

General Pershing will make his headquarters at Treves. General Preston Brown has been made Military Governor with General Harry A. Smith in charge of civil affairs. The inhabitants are required to carry identity cards and to be indoors by nine o'clock, and they are not allowed to use the telephones.

More than 1,500,000 Allied and

## THE GREAT WAR

**November 28**—Kaiser William formally abdicates. Pillaging of Jewish quarter in Lemberg.

**November 29**—Lithuania declares itself an independent republic. Hungarian Government interns Mackensen's army of 170,000 at French demand.

**November 30**—Peru and Chile call out troops over boundary dispute. All Russian Government of Ufa refuses to support Admiral Kolchak as dictator.

**December 1**—American army enters Germany and occupies Treves. American troops from Archangel defeat Bolsheviks on Pinega River.

**December 2**—King Nicholas of Montenegro declared deposed. British fleet arrives at Baltic port of Libau.

**December 3**—Spanish cabinet resigns. Allied conference at London concluded.

**December 4**—President sails for Paris peace conference. German army officers defeat revolutionists in battle at Kreuznach.

American prisoners have been released by the Germans under the terms of the armistice and of these 250,000 will pass into the American lines. The task of feeding and caring for them will be difficult on account of lack of transportation. Several thousand American prisoners have been received and examined by the army surgeons, who report their physical condition as good as could be expected. No evidence was found to support the rumor that the prisoners had been

inoculated with malignant and contagious diseases. Some complain of bad food, harsh treatment and uncomfortable quarters, but in the majority of cases the men said that they were not much worse off than the German soldiers.

## Turmoil in Germany

Politically Germany is in chaos. The hierarchical system of administration which has regulated in detail civilian as well as military life has collapsed and the power has passed into the hands of self-appointed dictators, citizen volunteers and committees of soldiers and workingmen. If a map of the country could be drawn it would resemble the Germany of the seventeenth century rather than that of the nineteenth, for it is split up into numerous semi-autonomous states with ill-defined boundaries and indeterminate jurisdiction.

But in spite of this political confusion the natural orderliness and disciplined training of the people have so far prevented a degeneration into the ruinous riot of Russia. The difficult task of demobilization and evacuation is being carried out in a systematic manner and there have been few cases of disorder by the deserting or disbanded soldiery. Altho the Socialists were before the war regarded with abhorrence by the other classes of the community, yet now that the Socialists are in power they are receiving the support and cooperation of their former opponents to a remarkable degree. The government

### THE LEADERS OF THE ALLIES DRAWING UP THE ARMISTICE TERMS

This is the first photograph received in this country of the momentous occasion when the Allies dictated to Germany the terms of surrender. The representatives of the Allied governments are seated at the council table in the Versailles palace. On the left side of the table, from left to right, are: General di Robilant; next man unidentified; Italian Foreign Minister Sonnino; Italian Premier Orlando; Colonel Edward M. House; General Tasker H. Bliss; next man unidentified; Greek Premier Venizelos; Serbian Minister Vesnich. On the right side of the table, from left to right: Admiral Wemyss (with back to camera); General Sir Henry Wilson; Field Marshal Sir Douglas Haig; General Sackville West; Andrew Bonar Law; Premier David Lloyd George; French Premier Georges Clemenceau; and French Foreign Minister Stephen Pichon.

officials and military commanders have in most cases been retained, tho placed under the authority of some soviet or republican cabinet. Certain of the army officers, such as Generals von Arnim, Behm and Ederhart were shocked at the display of red flags which welcomed the troops on their return from the front and issued orders prohibiting any soldier from accepting a red flag or badge. But Field Marshal von Hindenburg overruled them and issued a proclamation declaring that the red insignia should not be regarded as offensive if displayed in a dignified form, and on the other hand that the soviets should not object to the old national colors.

At the outbreak of the revolution the non-Socialist parties disappeared from sight, but now they are beginning to reorganize in order to be a factor in the election for a constituent assembly that takes place in January. Various bourgeois parties, such as the National Liberal and Progressive, are forming to secure a republican rather than a working class government. There are rumors of counter-revolutionary movements, with General von Mackensen at the head, aiming to restore the monarchy. Millions of anti-Socialist and anti-Semite pamphlets are being distributed.

But the chief danger to a Berlin directorate is from the Spartacus and Independent Socialists, who want a Bolshevik regime. They have seized the wireless stations and the Government has warned the outside world that news from this source is not to be relied upon. But the general congress or soviet of Soldiers' Deputies held at Berlin supported by an overwhelming majority the People's Plenipotentiaries headed by Ebert, are willing to leave the question of the future government of the empire to a freely elected assembly.

The Council of People's Plenipotentiaries at Berlin is composed exclusively of Socialists, tho of both factions. Other German states have admitted a limited representation of other parties. Thus the Baden Cabinet consists of seven Socialists, two Clericals, one National Liberal and one Progressive. The Oldenburg Cabinet consists of five Socialists, two Bourgeois and two former ministers.

The storm center of Germany now is Kurt Eisner, the poet and journalist who has assumed the dictatorship of Bavaria. The Catholics are disposed to dislike him because he is a Jew, the Conservatives because he is a radical Socialist and the Bavarians in general because he was born in Galicia and only came to Munich from Berlin a couple of years before the war. His disclosure of official documents throwing the responsibility for starting the war upon the Prussians has offended Berlin. He is accused of playing into the hands of Clemenceau, the French Premier, by endeavoring to separate southern Germany from Prussia.

On his part Eisner denounces the Berlin Government for its conservatism and prevarication, and demands the

International Film

#### THE INSIGNIA TO BE WORN BY ALL VETERANS OF THIS WAR

There will be approximately forty million men entitled to wear this black and gold button designed by Louis E. Dolson and received by the governments of the Allies and the United States

dismissal of such hold-overs from the the old regime as Solf of the Foreign Office and Erzberger, who negotiated the armistice. He threatens to secede from Germany and, if necessary, to fight Prussia. In addressing the Soldiers' and Workmen's Council on his return to Munich, Premier Eisner said:

In these last few days I have become the best hated man in Germany. At first all the newspapers praised me. Now they are all slandering me.

In Berlin I noticed that the counter-revolutionary elements behaved as if nothing had happened. Thereupon I took from my portfolio a document which I thought

Press Illustrating

#### ANOTHER KING DEPOSED

The contagion of democracy is spreading. The latest king to go is the venerable ruler of Montenegro, who has been deposed, with his family, by the "Skupstina," the Montenegrin National Assembly

was bound to rend the last veil from the conspiracy leading to the world war. With this document I hoped for a blow at the counter-revolutionary Government.

I told the gentlemen of the old system that they were incapable of conducting the peace negotiations. It is true that we have a revolutionary Government in Berlin, but it has nothing to say. If Berlin is incapable of acting, we Bavarians must first help ourselves and act in the interests of the whole.

The opponents of "the Bavarian Trotzky" retaliate by asserting that Eisner, being in close touch with the Bavarian War Department, was the only Socialist in Germany who as early as July 28, 1914, knew that war had been decided upon. At that time he was busy telephoning to the Socialist editors to support the Imperial Government in its war policy.

#### Opening the German Archives

When Lenine made public the secret documents found in the Russian Foreign Office he said to the Germans: "Go, break into your own archives and you will reveal things quite as bad." The Germans are now following his advice. The Berlin soviet has requested the People's Plenipotentiaries to seize and examine all documents of the old regime relating to foreign affairs and the revolutionary government in Bavaria has already begun the publication of the official reports of Count von Lerchenfeld, the Bavarian Minister at Berlin previous to the war. These confirm the charges of the Allies that the German Government was cognizant and approved of the Austrian ultimatum to Serbia. Lerchenfeld writes under date of July 18, 1914, that the note to Serbia was delayed until after President Poincaré and Premier Viviani had made their visit to St. Petersburg so it would be difficult to secure coöperation with Russia. He said: "Serbia cannot accept such conditions - as will be laid down. There must be war." Austria, he declared, could not long delay action, "for that might give Serbia, under pressure from France and Russia, an opportunity to offer satisfaction." On July 31 he wired to Munich that the German ultimatums to France and Russia would be rejected and that the German armies would at once be sent thru Belgium into France, which "would be overwhelmed in four weeks," for the French army was weak in morale and munitions.

Dr. Zimmermann, former Secretary of Foreign Affairs, in reply to the Bavarian charges says: "We did not prompt Austria-Hungary to her action, but expressly advised her against it. The Vienna ultimatum, which we considered too severe, was communicated to us too late for an endeavor to mitigate it."

The ex-Kaiser lays the blame for the war upon Chancellor von Bethmann-Hollweg and Foreign Minister von Jagow who, he says, sent him off against his will on a yachting cruise to Norway while they carried into effect their plans for precipitating a war.

The German Government has asked the Allies and the United States to refer the question of who was responsible

for the war to a neutral commission in whose hands should be placed the secret documents of all the belligerents for examination. The German Government is starting on its own account an investigation into the German crimes in Belgium, the deportation of Belgian workmen, the theft of Belgian machinery, and the murders of Edith Cavell and Captain Fryatt.

The Altho the abdication of ex-Kaiser the Kaiser and Crown Prince before their flight to Holland was told with great circumstance there was still some skepticism in Allied countries because no act of abdication was made public. In order to settle the question the Berlin Government sent Admiral von Hintze, formerly Foreign Secretary, to Holland, and he elicited this declaration:

By the present document I renounce forever my rights to the crown of Prussia and the rights to the German imperial crown. I release at the same time all the officials of the German Empire and Prussia and also all officers, noncommissioned officers and soldiers of the Prussian Navy and Army and of contingents from confederated states from the oath of fidelity they have taken to me, as their Emperor, King, and supreme chief.

I expect from them until a new organization of the German Empire exists that they will aid those who effectively hold the power in Germany to protect the German people against the menacing dangers of anarchy, famine, and foreign domination.

Made and executed and signed by our own hand with the imperial seal at Amerongen, November 28. WILLIAM.

There is a growing demand both in Germany and abroad for the personal punishment of the ex-Emperor and others guilty of instigating the war or authorizing its atrocities. The heads of the British, French and Italian governments, now in conference at London, are said to have decided to ask Holland for the extradition of William Hohenzollern as a murderer or pirate and, if the Dutch Government refuses, to employ such force as may be necessary. Many of the German soviets are also demanding his return and punishment and have offered rewards for his assassination. The German Government, however, lays the blame on German and Austrian militarism in general and will wait till the examination of the Foreign Office documents makes clear the question of individual guilt.

The ex-Crown Prince The Crown Prince, who is living in the cottage of the village pastor on the island of Weirigen, Holland, has given out an interview in which he states that he has not renounced anything and has not signed any document whatever, but he adds:

However, should the German Government decide to form a republic similar to the United States or France I shall be perfectly content to return to Germany as a simple citizen, ready to do anything to assist my country. I should even be happy to work as a laborer in a factory.

Frederick William claims that he was convinced that the war was lost after the battle of the Marne in October, 1914, and he urged the General Staff to seek peace then even at the sacrifice of Alsace-Lorraine, "but I was told to mind my own business and

Hankwell in New York Tribune

#### THEY WORK IN THE DARK

The rats—alien enemies, yellow journalism, anti-Ally propaganda, maudlin sentiment—are gnawing away the foundation of victory while the forces at the top are still finishing its head

confine my activities to commanding my armies. I have proof of this." He also says that he was opposed to the attack on Verdun, which he thought was a mistake. He complains of other cases in which he was overruled:

The air raids on London and other towns and the big gun used against Paris were useless militarily, and, in fact, silly. Orders to submarine commanders were read differently by various officers who went much too far. Two years ago I suggested an international agreement confining air activities to the actual war zone, but my opinion was entirely disregarded.

At the end, he says, his soldiers were worn out and their strength reduced so that sometimes an entire division numbered only 600 rifles. On the origin of the war he says:

Contrary to all statements hitherto made abroad, I never desired war, and thought the moment quite inopportune. I was never consulted, and the report about a Crown Council being held in Berlin to decide on the war I deny on my oath. I was enjoying a stay at a watering place when mobilization was ordered.

Polish As soon as the Austrian monarchy collapsed, strife broke out between the Poles and Ruthenes over the possession of Galicia. The Ruthenes want to join with the Ukrainians of southern Russia, who are their next neighbors to the east and are of the same race and religion. Before signing the Brest-Litovsk treaty with the Central Powers the Ukrainians secured a promise from the Austrian Government in the event of a break-up of the Empire, that only the western part of Galicia, namely, the Grand Duchies of Auschwitz, Zator and Cracow, should go to Poland, while the eastern part, namely, the ancient kingdoms of Galicia and Lodomeria, should go to the Ukraine. This division corresponds fairly well with the distribution of population, for in two-thirds of Galicia the Ruthenes predominate. But the cities, especially Lemberg or Lvov, are chiefly inhabited by Poles and Jews. The Jews, who

form 11 per cent of the population of Lemberg, sympathize with the Ukrainians, for they have suffered persecution under Polish rule and they fear it for the future.

When the armistice was signed the Poles took possession of Cracow, an ancient Polish city at the western end of Galicia. Then the Polish army under General Vitoldorski started eastward to conquer the whole of Galicia so as to appear before the peace conference with the disputed territory already in their possession. They easily captured Przemyśl, the fortress that stood a long siege by the Russians three years ago. Then they marched on Lemberg, where the Ruthenes, reinforced by Ukrainian troops, put up a stout resistance, but were finally overcome.

From Jewish sources it is reported that when Polish troops entered Lemberg they formed a cordon around the ghetto and proceeded to sack and burn the Jewish houses and shops. The water supply was shut off to prevent the extinguishing of the flames, and Jews trying to escape were shot in the streets. Jewish girls were raped and then thrown from the windows. A synagogue in which the Jews had sought refuge was set on fire and hundreds are said to have perished. The massacre continued for three days without any attempt of the Polish officers to stop it. Other observers lay the looting to the townspeople and say it was at length stopped by Polish patrols. According to the Ukrainian minister at Vienna, four thousand men, women and children were killed. Other reports place the number of victims at 1100. According to the Associated Press correspondent, "only a few persons were killed tho many were wounded." He reports that one wing of the Diet building was burnt and the post-office, railway station and a few dozen houses were blown up. The American Jewish and Polish organizations have appealed to the President for an investigation. The Polish committee of Berne declares that "the disorders had no political bearing but were economic in character." The Polish committee of Paris declares that they "had no religious character whatever but were purely political and industrial." The Polish commander declares that the "regrettable reprisals" were provoked by the Jews, who threw boiling water from the houses on the Polish soldiers, and that the Jews were guilty of trying to spread Bolshevism.

The English The parliamentary elections to be held on December 14 are unprecedented and incalculable. No general election has been held since 1910, and the present Parliament would have expired three years ago if it had not extended its term by resolution because an election during the war was thought inexpedient. Now it can no longer be put off, and the coalition cabinet with Lloyd George at the head, having carried the war thru to a successful conclusion, is appealing to the country for a vote of confidence to enable it to

carry on the work of peace negotiation and reconstruction.

When the war began Lloyd George was Chancellor of the Exchequer in the Liberal Cabinet of Premier Asquith and was detested by the Conservative Unionists for his radical policies of land and labor reforms and his opposition to the Established Church in Wales and the House of Lords. But when he displaced Asquith as Premier of the coalition cabinet he found the best support for his war policies among his former opponents, and he is now regarded with suspicion by the Liberals and Laborites because of his new allies. He now joins with Bonar Law, the leader of the Unionists and Chancellor of the Exchequer, in a campaign on the following platform:

The conclusion of a just and lasting peace and so establishing the foundations of a new Europe that further wars may be forever averted; reducing the burden of armaments and the promotion of a League of Nations; state acquisition of land for soldiers and sailors, either with cottages with garden allotments or small holdings on a large scale; schemes for agricultural developments and extensive forestation and reclamation schemes; comprehensive housing schemes; larger industrial opportunities; improved material conditions of employment; preferential tariff for the colonies; no fresh taxes on food and raw materials; development and control in the best interests of the state of economical production of power and light, also railways, roads, and canals; improvement of the consular service; removal of all existing legal inequalities between men and women, and reform of the Constitution and of the House of Lords.

#### Our Delegates to the Peace Conference

would head the representatives of the United States at the international peace conference was followed on November 29 by the announcement of the other four delegates: Robert Lansing, Secretary of State; Edward M. House, the present representative of President Wilson in the Supreme War Council at Versailles; Henry White, former Ambassador to Italy and France; and General Tasker H. Bliss, United States military adviser in the Supreme War Council.

Mr. House and General Bliss have previously represented the United States at the Allied War Councils in France. Mr. House was President Wilson's personal representative to the

President Wilson's decision that he himself

European governments in 1914, 1915, 1916, and was appointed by the President in September, 1917, "to gather and organize data that will be needed at the peace conference." General Bliss was made chief of staff of the United States army on September 22, 1917, designated commanding officer of the United States army on October 6, 1917, and appointed soon after United States military representative in the Supreme War Council at Versailles.

Dr. White is the one Republican in the peace delegation. He has represented the United States in many international conferences: at the London Conference in 1887 for the abolition of sugar bounties, at the Conference on Agriculture at Rome in 1905, at the fourth Pan-American Conference in Buenos Aires in 1910. He was American Ambassador to Italy from 1905 to 1907 and to France from 1907 to 1909.

That Secretary of State Lansing should attend the peace conference was taken for granted, and it was generally expected that other members of the Cabinet would also be included. Secretary of War Baker may take President Wilson's place in the conference when the President returns to this country.

President Wilson and the other members of the peace delegation sailed for France December 4 on the transport "George Washington," our second largest ship, preceded by the "Pennsylvania," flagship of our fleet, and conveyed by fifteen destroyers. Several hundred newspaper correspondents, assigned to "cover" the peace conference,

#### THE PRESIDENT'S BUSY DAY

At one glance, December 2, President Wilson made his annual address to Congress on the state of the Union, reviewing the war achievements of the past year that culminated in the victory over Germany, and less than twenty-four hours later he left the capital and began his trip to Europe to take part in the councils that will bring world peace and international order. In the photograph above President Wilson is standing on the deck of the "George Washington," just leaving port. With him, from left to right, are Mrs. Lansing, Mrs. Wilson and Dr. Grayson.

sailed December 1 on the "Orizaba." With the President's party are a staff of scientists and authorities on history, geography and economics who have been working for thirteen months compiling data for use at the peace conference. The director of their work, which came to be known as "The Inquiry," is Dr. S. E. Mezes, president of the College of the City of New York. Professor Haskins of Harvard, specialist on Alsace-Lorraine and Belgium; Professor Day of Yale, specialist on the Balkans; Professor Lord of Harvard, specialist on Russia and Poland; Professor Seymour of Yale, specialist on Austria-Hungary; Professor Westerman of Wisconsin, specialist on Turkey, and Dr. Bowman, director of the American Geographical Society, are also on the staff.

**The President's Message** On the day before he sailed for France, President Wilson made his annual address to the Congress on the state of the Union, and reviewed at length our war activities during the past year and the problems of reconstruction that demand our immediate consideration. He praised the valor of our soldiers and sailors and civilians in war work, spoke especially of what the women of the nation had done, and urged the passage of a Federal amendment for woman suffrage. He suggested the resumption of industries curtailed by the war as an aid in the readjustment of labor, approved the plan of the Secretary of the Treasury for a \$6,000,000,000 tax levy in 1919 and a \$4,000,000,000 tax for 1920, urged upon Congress an early decision concerning the disposal of the railroads, endorsed the increased naval building program, gave specific approval to the Secretary of the Interior's plan for the reclamation of three hundred million acres of land for cultivation

by returning soldiers, advised the ratification of a treaty of adjustment with the republic of Colombia, and suggested the establishment of priorities of export and supply to aid the devastated regions of Belgium and northern France in reestablishing their industries.

The general hope that President Wilson would outline his views on the points to be discussed in the peace conference was disappointed. The President merely announced his "purpose to join in Paris the representatives of the governments with which we have been associated in the war against the Central Empires for the purpose of discussing with them the main features of the treaty of peace." He added:

The Allied governments have accepted the bases of peace which I outlined to the Congress on the 8th of January last, as the Central Empires also have, and very reasonably desire my personal counsel in their interpretation and application, and it is highly desirable that I should give it in order that the sincere desire of our Government to contribute without selfish purpose of any kind to settlements that will be of common benefit to all the nations concerned may be made fully manifest. The peace settlements which are now to be agreed upon are of transcendent importance, both to us and to the rest of the world, and I know of no business or interest which should take precedence of them.

On the vexed problem of turning our industries from war channels into those of peace, President Wilson said in part:

While the war lasted we set up many agencies by which to put every material energy of the country in harness to draw the common load and make of us one team in the accomplishment of a great task. But the moment we knew the armistice to have been signed we took the harness off. Raw materials, upon which the Government had kept its hand for fear there should not be enough for the industries that supplied the armies, have been released and put into the general market again. Great industrial plants whose whole output and machinery had been taken over for the uses

of the Government have been set free to return to the uses to which they were put before the war. It has not been possible to remove so readily or so quickly the control of foodstuffs and of shipping, because the world has still to be fed from our granaries and the ships are still needed to send supplies to our men overseas, and to bring the men back as fast as the disturbed conditions on the other side of the water permit. But even these restraints are being relaxed as much as possible, and more and more as the weeks go by.

The problem of railroad control was discussed rather fully by the President as "the question that causes me the greatest concern." He explained:

It was necessary that the administration of the railways should be taken over by the Government so long as the war lasted. It would have been impossible otherwise to establish and carry through under a single direction the necessary priorities of shipment. It would have been impossible otherwise to combine maximum production at the factories and mines and farms with the maximum possible car supply to move the products to the ports and markets; impossible to route troop shipments and freight shipments without regard to the advantage of the roads employed; impossible to subordinate, when necessary, all questions of convenience to the public necessity; impossible to give the necessary financial support to the roads from the public treasury. But all these necessities have now been served, and the question is, What is best for the railroads, and for the public in the future?

I believe that it will be serviceable for me to set forth as explicitly as possible the alternative courses that lie open to our choice. We can simply release the roads and go back to the old conditions of private management, unrestricted competition, and multiform regulation by both State and Federal authorities; or we can go to the opposite extreme and establish complete control, accompanied, if necessary, by actual Government ownership; or we can adopt an intermediate course of modified private control, under a more unified and affirmative public regulation and under such alterations of the law as will permit wasteful competition to be avoided and a considerable degree of unification of administration to be effected, as, for example, by regional corporations, under which the railways of definable areas

HAIL! HAIL! THE GANG'S ALL HERE

There is nothing downhearted about the wounded men who are coming back now by the thousands to hospitals over here. They keep the wards gay with songs and stories and the "walking cases" wave to the passersby. These men are celebrating Thanksgiving in Debarcation Hospital 2, in New York, where four thousand men are to be cared for. The hospital is the largest in the country and it has as incidental attraction a theater and a roof garden and a canteen for its patients.

would be in effect combined in single systems.

The one conclusion that I am ready to state with confidence is that it would be a disservice alike to the country and to the owners of the railroads to return to the old conditions unmodified. Those are conditions of restraint without development. There is nothing affirmative or helpful about them. What the country chiefly needs is that all its means of transportation should be developed, its railways, its waterways, its highways, and its countryside roads. Some new element of policy, therefore, is absolutely necessary—necessary for the service of the public, necessary for the release of credit to those who are administering the railways, necessary for the protection of their security holders. I stand ready and anxious to release the roads from the present control, and I must do so at a very early date if by waiting until the statutory limit of time is reached I shall be merely prolonging the period of doubt and uncertainty which is hurtful to every interest concerned.

**Peace in the Senate** When the Senate found itself unrepresented in President Wilson's choice of peace delegates and uninformed as to the details of the President's program at the conference, it held a stormy session. Senator Cummins, of Iowa, offered a resolution to create a senatorial peace commission of four Democrats and four Republicans to go to Paris to keep the Senate in touch with developments there. The Senate committee postponed action on it.

Senator Williams, of Mississippi, presented an outline of the league of nations that was rather generally accepted as an accurate definition of President Wilson's views. It provides for an international agreement binding all the nations to submit quarrels to arbitration, the decisions of which would be enforced if necessary by all the military and naval power which the members of the league could bring to bear. Sovereignty of the seas, however, would be retained by Great Britain and the United States. Senator Reed, of Missouri, commented that such a league, based on British and American supremacy, would meet objection from other countries, and proposed instead a recodification of international law to be backed by the force of public opinion and the military strength of each nation.

**The Boys Come Back** The first big troopship of returning soldiers, the "Mauretania," docked at New York on December 1 with 4000 American troops aboard. Most of the men were aviators from our training camps in England; there were also men of a construction unit and casual officers. Crowds of civilians waiting to meet the big liner as it warped into the dock shouted a noisy, tearful, happy welcome to the forerunner of our homeward bound troops.

Many other troopships are reported to be on the way home now from England and France. The "Kronland" sailed from a French port on November 29 with 1349 soldiers, including the headquarters detachment of the Seventy-sixth, a division of the New England National Army troops. The War Department expects to bring home in December between 150,000 and 175,000 men. Boston, New York,

Newport News and Charleston, South Carolina, are the ports designated for their return. But even with this distribution of the strain on port facilities and with the use of German ships now idle in German harbors it is estimated that ten months will be required to bring our army home.

In the training camps and colleges in the United States demobilization is proceeding rapidly. All the men of the Students' Army Training Corps are to be out of the service by the middle of December. Most of the army officers' training camps will be emptied by that time, too, but officers in training for the navy are expected to complete their course. The 649,000 men now in army camps and cantonments here are being demobilized.

The Federal Employment Service has enlisted the cooperation of all organizations which have been actively concerned in the welfare of soldiers and sailors in a general service of information to returning men concerning the opportunities of industrial or agricultural work open to them. Each community is to have an employment information bureau directly connected with the interstate and intercommunity clearance system of the Federal Employment Service. There will also be special bureaus to find work for men trained in the professions and to provide vocational guidance for men under nineteen.

**What Our Army Has Done** The most interesting part of Secretary Baker's report of military progress during the past year is the appendix, a ten thousand word report by General Pershing, which tells the whole story of our army's achievements in France. General Pershing sets forth concisely the organization of the A. E. F., the training overseas, the enormous task of the Service of Supply, and the actual combat operations of the troops from the morning of May 28, when the first division

attacked the commanding German position on its front, taking with splendid dash to town of Cantigny and all other objectives, which were organized and held steadfastly against vicious counterattacks and galling artillery fire.

Secretary Baker announced in the early part of his report that he would lay before Congress a plan of organization for the regular army "which shall continue as the nucleus of any future military establishment," and explained any specific recommendations would be premature until "the peace conference shall have determined the future international relations of the world."

**The Mooney Case** By commuting the death sentence of Thomas J. Mooney to life imprisonment Governor Stephens of California has averted a general uprising of organized labor, but has failed to settle a matter of principle that has provoked discussion for over two years.

The story of the Mooney case reads like the scenario of a movie melodrama. In the midst of a great parade in San Francisco as part of a "Preparedness

FUEL ADMINISTRATOR GARFIELD RESIGNS

The list of war-time administrators who are leaving Washington to go back to their peacetime positions grows larger daily. Harry A. Garfield, president of Williams College, has offered his resignation as head of the fuel administration in order to take charge of college affairs again. President Wilson has announced that the fuel administration will continue its work, however, until at least the end of the winter

Day" celebration, on July 22, 1916, a clockwork bomb exploded, killing ten people and injuring many others. Certain radical labor elements there, as elsewhere in the United States, had been opposing preparedness agitation. Suspicion of guilt in the explosion fell upon the leaders of this radical propaganda, particularly upon Mooney, who was an alleged I. W. W. supporter. Together with four other men and his wife he was indicted, convicted and sentenced to death.

The case was taken up by organized labor thruout the United States and even in Europe and Mooney's appeal for a new trial was backed by various strikes and threats of strikes. The appeal was denied last March. President Wilson then wrote to Governor Stephens asking him to see that Mooney was given another trial and a commission examined the evidence and recommended it. But he was resented to be hanged on August 23.

Less than a month before the date set for his execution Governor Stephens granted Mooney a reprieve to December 13. Next the case was carried to the United States Supreme Court, on November 18, but that body proclaimed itself powerless to intervene. Labor thruout the United States thereupon threatened a general strike. Mooney's life was finally saved by Governor Stephens' commutation of his sentence.

The Governor's action has failed to satisfy either side of the case. Mooney has issued a statement to the Governor:

I prefer a glorious death at the hands of my traducers to a living grave. I am innocent. I demand a new and fair trial or my unconditional liberty thru a pardon. If I were guilty of the crime for which I have been unjustly convicted, hanging would be too good for me.

# THE FUTURE OF AMERICAN SHIPPING

BY DONALD WILHELM

AUTHOR OF "IS UNCLE SAM TO KEEP THE RAILROADS?"

Gillics Service

Giving the first lesson to future sailors

**M**R. HURLEY is in Europe to sell future ships. He is there for other purposes—by report to bring about constructive control, coöperative in nature, of all ships afloat, for one thing—but he expects that the shipbuilding industry of America is eventually to have a million workers and he has an eye for seeing to it that none of the nation's ship ways are to be idle. Mr. Hurley, in a word, believes in the future of America as a maritime nation.

He knows that the Emergency Fleet Corporation has made a beginning, which a great many persons overestimate, of a merchant marine which has promise of being one such as the world has never seen but which is hardly comparable to England's now.

When the submarines were sinking forty vessels a day, we entered upon a program of shipbuilding. The spirit of that program was "hurry." Now the war time need of hurry is over. But the peace time need of hurry is here. The peace time need of ships, during the next six months, so the Shipping Board knows, is almost as stern a problem as the war time need. But there is a difference, a difference of quality. In other words, before, tonnage was the cry, any kind of tonnage. But now the need of *any kind* of tonnage is over, and the need now is such that the Shipping Board is confronting problems even more complicated than were those of a few months back. "The war time problem," Mr. Hurley said to me, just as Mr. McAdoo did about the railroads, "was one thing. The peace time problem is another thing."

Under Mr. Hurley's leadership, in August of this year the United States took rank as the leading shipbuilding nation of the world. It now has more shipyards, more ship ways, more ship workers, more ships under construction, and is building more ships every month than any nation in the world. Previous to the present year, the high

Gillics Service

Learning to tie knots is noontime work for the new recruit

mark of ship production in the United States was reached in 1916, when thirty-eight seagoing vessels of about 300,000 total dead weight tons were built. Between August, 1917, and November, 1918, however, America launched 641 of about four million total dead weight tons and completed 476 of these, aggregating nearly 2,750,000 tons.

These figures sound huge, to Americans. Yet all the ships we have built and all those we have chartered are insufficient even to maintain our army abroad. It is a fact, thus, that in the last few weeks the Shipping Board has had to divert eleven steel steamers from the fruit trade to replace some of those withdrawn from transport duty by the British. Our merchant marine sounds very huge, and it is huge compared to what we had before. But it is not comparable to the 18,136,217 tons of shipping the British had left as of October 1st of the present year, in spite of more than twenty millions of tons of shipping destroyed by the submarines and otherwise, nine millions of which were British.

But the fruits of victory cannot be estimated only in tonnage. We have, in other words, got considerable tonnage, lost some, and got a great deal of experience.

As a result of this experience, some expensive vagaries have come home to port.

The concrete ship is, by many persons, considered one of them. There are forty-two of these under construction,

only one in operation, and no complete and conclusive figures yet to prove past question whether this one, "The Faith," is a real success.

Another vagary is the wooden ship. The proof that, for trans-Atlantic service at least, it was a will-o'-the-wisp is that there is not, at the present moment, in spite of the tremendous need of ocean tonnage, a single wooden ship being operated in trans-Atlantic service, by the Ship-

ping Board, today. They are being used to relieve steel vessels from coastwise, West Indian, lake and other traffic, but not one vessel of the 220,000 tons so far completed is in trans-Atlantic service.

From the point of view of the ocean mariner, thus, and from the point of view of not a few of the officials of the Shipping Board, the wooden ship is a tribute to tradition, and, to the extent that it was expected to do ocean service, a failure.

The wooden ship was built for many reasons. The cry was for ships, any kind of ships. We had the timber, it seemed likely that we could get the men. So a great many persons argued that there was no reason why we could not build wooden ships by the hundred, and build them virtually as fast as steel ships. But the sad part of their argument is that, the wooden ships are not such a success in trans-Atlantic service as Mr. Schwab might be proud of, they take, when they are of only 3500 tons, an average of about a year to build, whereas a contract steel ship of 6000 tons, about twice as big, and at least a third cheaper to operate, requires, on the average, only about 150 days, so that, in terms of tonnage, a wooden ship takes four times as long to build as a steel ship—and then, for real ocean usage, is not a complete success. It takes practically a year to build a wooden ship, which necessarily is a small one. But in one year one company near Seattle built twenty-five steel ships, all larger by 100 per cent.

These are facts which make clear

why, in the future plans of the Shipping Board, the wooden ship is a passing or minor phase, despite the fact that now the war is over ships no longer need to coal for a round trip. Wooden ships, in a word, have had their day.

Power is another factor that is worrying the thoughtful members of the Shipping Board. Keeping pace with the effort toward achieving the greater economy of larger and larger and faster and faster ships is the effort to reduce the space required for fuel. The larger the ship is, the greater is the proportionate saving in space required for fuel, and the handier and the more economical in operation, therefore, the ship becomes. "The bigger the ship, and the faster, the better!" argues Mr. Schwab, whose great ore ships carried Pershing's locomotives over. And Admiral David W. Taylor, Chief Constructor of the Navy and the first of all ship architects, told the writer, while pointing out that speed and size and cargo capacity are phases of ship construction that are closely related, "Experience in recent years has confirmed the conclusion that for high speed vessels, the length is a primary factor. In the majority of cases, we can reduce the resistance by increasing the length." He added that the tendency is, indisputably, for ships to become larger and faster; that there is no limit to the increase in their size except the depth of harbors, and he concluded that the New York Harbor was deepened to twenty feet, then to thirty, then to forty, it is now regrettable that, with all the other principal harbors of the world, it was not deepened to fifty or sixty feet.

There is no limit to the size of ships, Admiral Taylor argues.

And Mr. Hurley adds that there is a very definite limit to the size of the American merchant marine if the spirit and pride of America is neglected. Bigness, he says, is the spirit of America. And speed is the spirit of America. And skill. "We can manufacture ships," he says, "without number. We can export ships. We can manufacture ships for ourselves and most of the nations of the rest of the world. But American youth will not man them, or any great part of them, if American pride is neglected." He pointed out that ships of almost any old kind satisfied American pride while the war was on, because winning the war was the order of the day. But now the war is over.

For forty years there has been a traditional notion that the speed of cargo ships need not be over nine or ten knots. The speed of the 3500 ton ships built during the war, and still under construction is, thus, only nine and a half knots, and the ships of 8800 tons and over average from ten and a half to eleven and a half knots. But the tendency, for reasons of economy first of all, is to build faster ships, capable of twelve or thirteen knots or so, for the reason, principally, that a ship has become, in cost and in operation, an immensely valuable thing, and the more valuable it becomes the more necessary it is to utilize its functions to the ut-

most. The Shipping Board is determined to get the greatest possible efficiency. To illustrate is simply to point to the manner in which the handling of ships has been improved upon. It has been the traditional custom to spend fourteen days at sea, for instance, then three or four in one port, another day at sea, then three or four days in another port, then, perhaps, a dozen days at sea and three or four weeks in New York Harbor. But the days of such leisure are over, if the Shipping Board has its way. It has brought about much better skill in routing, greater unification in cargoes, fuller loading, less time in port. Two trips a month used to be the rule for a collier operating between Norfolk and Boston. Now the pace set is four trips a month. The "Tuckahoe," for its size the fastest built ship in the world, was making four trips a month when she was diverted to trans-Atlantic service. And she is typical of the new order.

Another factor that makes it necessary for America to set the pace on the seas, as it has been doing for years on the Great Lakes in the most efficient handling of freight in the world, is the increased cost of American labor. Mr. Hurley contends that even with the handicap of the La Follette law, which provides larger crews and better quarters, hours and pay than is the rule on the merchant marine of any other power, American efficiency in the end will tell. And he contends that even if the American Federation of Labor is successful in insisting on an eight-hour day on ships, as the British Seamen's Union is also contending for, still American efficiency will win the day.

A very large portion of the cargo space of a small ship is required for fuel. A very large portion is required

for engines. But the proportion of space required for fuel and engines diminishes as ships are made larger. What this argues for size can be illustrated in the case of the railroads, which, tho costing more to operate than any railroads in the world, are still the most efficient in point of the cost of handling freight. When we pull a freight train in the United States, it is pointed out by some of the experts of the Shipping Board, only about one-quarter of the weight of the train is its own weight, and something like three-quarters is net load. But when Europeans move freight more like half of the load is the train's own weight.

It may be seen from these arguments why the new program of the Shipping Board is likely to differ a great deal from the old program. Our merchant marine as it now exists is made up of slow ships and fairly small ships. But the future ships are to be faster and larger, except in those few instances where smaller and slower ships will do, and those instances are being studied now in a careful survey conducted by the Shipping Board.

There are reports that the British have plans, not for the building of wooden ships or slow ships or small ships, but rather for steel ships, big ships, fast ships, many, at least, of which are to be equipt with internal combustion engines. Here in America relatively little has been heard of the Deisel engine, yet it uses only about one-third of the same fuel that, likely, most of our ships of the future will use—oil. Oil as fuel has many advantages, one of which is that it can be stored in the double bottom of a ship, out of the way of cargo. And when the advantages of oil fuel are combined with the advantages of the Deisel engine, enormous advantages result. It is possible then for a ship to take on enough fuel to travel half around the world and back. The British realize that. So does the Shipping Board, for it has learned a great deal from its experience with one vessel equipt with the Deisel engine—one, by the way, that put into Norfolk in August after a most instructive voyage, with a cargo of sugar brought all the way from Hawaii.

Small ships are too little for America. Slow ships are too slow. Concrete ships are still an uncertainty. It is possible, thus, to anticipate, big, fast, oil-burning ships, some, at least, equipt with the Deisel engine.

Before the Great War began, when ship tonnage was plentiful, it sold for around thirty dollars a ton. English ships at date are costing around \$125 a ton to build, it is said. American ships have cost well above \$200, during the war, partly because the initial expense of yards and inexperience was enormous.

This high cost, it is argued by some, will make it impossible for America to relinquish its high-cost vessels without such loss that the argument would be for retaining them. But others answer that the great cost, which is steadily being reduced, is one of the essential costs of war. [Continued on page 373]

Edward N. Hurley, of the Shipping Board

# AS OUR WOUNDED COME HOME

BY  
EDITH DAY ROBINSON

Paul Thompson

*Ambulances with medical supplies of all kinds meet the transports at the pier*

**T**HEY have marched down Fifth avenue, trumpets making music for their feet, banners fluttering before their nescient faces. They have prest close to the rail of the big transport watching the sky-line blend with the mists. Finally, with their Allied brothers, they have flung their bodies into an on-rushing cataclysm and pushed it back. And now we are bringing them home, wearing their scars from the sacrificial fields.

No mother in the U. S. A. need worry about the care given her boy whom she knows to be a "casual" on a homeward-bound transport. Her confidence, as to that, may be shared by the close "of kin" of every boy who has fought his way to glory under the flags of the Allies and who is on his way home to tell the great tale. He may have been chief messenger boy in a button factory before he went over. He retains his titular prestige, only he is Chief High Cockolorum now. Every mother's son who leans on a cane, swings on

crutches, or is otherwise transported from deck to bunk, has only to wiggle his ear—if his little finger is gone—and some member of an adoring crew is on the job to do his bidding.

In one way the sailor has become the father of the soldier. (Now wait a bit. Don't go off full-khaki, Corporal Smith!) "We try to see they get over all right," the sailor told you, with an air of responsibility heavily shouldered. "When all's said an' done, it's them who's got the big job to do."

Now they are coming home, the scars of sacrificial fields upon them, the sailor takes a deep breath and says: "Why, them fellers can have anything they want! There come close to bein' a feller to valet every disabled man on board. They carry their food, lift 'em to steamer chairs, help 'em around generally. I guess you won't meet a 'casual' who won't tell you the ship was his for the askin', an', by God, he's rated it!"

Immediately a transport receives

notice it is to carry wounded on the return trip, preparation is commenced for the making of broths and food suitable to the weakened organisms. In proportion to the casualties, there are a sufficient number of doctors and an escort. Men of the "escort," many of them soldiers and sailors, act as hospital orderlies and attend the men exclusively.

The great executive system that has been moving an army from American to French soil is the same which provides for the care of those returned "out o' luck." As the big transport plows its dignified way thru the Narrows, the Medical Officer permanently stationed at Quarantine gives first notice that a shipload of wounded is coming in. Thru the office of the surgeon, port of embarkation, Hoboken, harbor boats—eight or ten of which have a rendezvous at one of the uptown piers in the Hudson River—are notified to meet it. Each shipload of wounded men is "cleared" thru Ellis Island.

After the transport has been met by the Medical Officer the unloading begins at a designated pier. Sometimes the men are dispatched to one clearing-house, sometimes to another. In the capacity of surgeon of the port of embarkation at Hoboken, Colonel J. M. Kennedy is responsible for the work of unloading and distributing the men to the clearing hospitals, where they are, in turn, distributed as quickly as possible to the treatment hospitals in New York and thruout the entire country.

On Colonel Kennedy's staff is a representative of the Red Cross. At the same time the harbor boats are ordered to meet the incoming ship, the Red Cross man is also notified of the new arrival, given advices as to how many men are aboard her, a general idea of their condition, and the pier at which the ship will dock. As the big liner eases into her berth a division of Red Cross lieutenants and aids is on the dock to meet her, supplied with cigarets and candy as well as kind words. There is also a supply of blankets and woolen medical stockings for men who have made the trip un-uniformed. If taken off at Ellis Island, ambulances are not needed. If the boys are taken to clearing hospitals in New York City, out in New Jersey, or down on Long Island, ambulances are mobilized at the pier.

The clearing hospital is the first step in the course of procedure on this side. According to his trouble, and the place where it can receive the best treatment,

*As the wounded are landed all along the coast, outdoor convalescence is possible for some*

is it decided where Jimmie shall go. Too frequently the site of the selected hospital is far from home. One of the hardest things in going thru a clearing hospital is meeting the mute query in their eyes: "Do you know where they are going to send me?" This situation causes real hardship, not a few heart-aches, and has to be borne for the sake of the ultimate good.

There are regular visiting hours when relatives may see their "belovéd" if the former can reach the hospitals. The boys usually get a furlough between the time they are discharged from the clearing hospital and are about to enter the other type institution for treatment. This furlough the boy uses to go home, as a rule, unless "home" is too far away and his pocketbook too slim to permit of even the reduced mileage granted to service men back from the front. This was the case with one man who had a furlough, but lived in Seattle, and his people could not afford mileage from New York to Washington and back to Atlanta, Georgia.

Sometimes the question of how to spend the precious interim is a burning one. One boy was hard prest to decide whether to go where his mother was, or to Rochester, where his girl was! Duty pulled him home, and love of joy to Rochester. He told us, in an aside, that they would cry over him a lot when he went home!

When the sick and wounded have to be transported on train trips after arrival in New York and are unfit to go unattended, they are accompanied by doctors and an escort in proportion to their number. The Government pays for their food the first day of the journey into the interior, after which the Red Cross meets the train at different points with its canteen service. To obviate difficulty for disabled men, Colonel Dalton, General Superintendent of the Transport Service, U. S. A., made an arrangement last fall with A. H. Smith, Regional Director of Railways, to establish a union ticket office in the Hudson Terminal Building, 30 Church street, New York. This means that transportation on all railways is issued at one point, which saves the man time and fatigue.

One has to get but a glimpse of the labyrinthine detail put into effect on this side, that has kept America's end of the war going on the other, to realize why the feet of some of the most valuable men in the service have never gotten away from their desks to tread trench-boards under foreign skies. Here's one of the glimpses: As Superintendent of the Transport Service, Colonel Dalton's job has involved supervision of all the ships—English Cunarders, French, confiscated German liners—collected from the Seven Seas and converted into transports; and the business of sending our 2,000,000 over on them and bringing them back. Lieutenant Colonel F. P. Jackson, on Dalton's staff, as officer in charge of the Supply Division, provides these transports with everything from scouring soap to life preservers. Where the care of the returned wounded is concerned, he pro-

Paul Thompson

*Casuals who are not stretcher cases pile into the ambulance with their luggage*

vides the hospitals with all articles not supplied by the medical department; engineers' supplies, cooking utensils, coal, clothes delivered for men without them, et cetera, ad finitum.

Speaking of life preservers recalls an anecdote illustrative of the care the Government tries to take of its men, stories to the contrary notwithstanding when the grouch brigade is out! The Government had a contract with a supply concern for a given number of life jackets, according to a conversation overheard in a building downtown among the skyscrapers, where the offices of the Transport Service are. Sixty thousand were turned in, the account goes, with the straps that fasten across the front not secure enough to satisfy the officer in charge of the Supply Division. He allowed twenty-four hours for the representative of the house furnishing the jackets to agree to make the straps conform to his ideas of safe-

ty, or give up the contract on the 60,000 garments.

"It is ridiculous!" the representative was heard to protest. "The straps are perfectly safe. To make the alterations you demand would take so many cents for every life preserver! It is impossible!" The officer in charge of the Supply Division smoked on. Finally, it is said, he took his pipe out of his mouth long enough to remark: "I can be real kind hearted, and I can be as cold as a fish. This is one of my fish days!" The man lost patience finally, threatening "to take the matter up with Washington."

"You're not going to have me thrown out of the service, are you?" the officer's long face peered over his own shoulder as the visitor's hand touched the door-knob.

"Now, you know, sir, I don't wanna make you any trouble—" replied the latter, hurry- [Continued on page 379]

# LEAGUE OF FREE NATIONS

## A STATEMENT OF PRINCIPLES

*As soon as the United States entered the war it became evident that the need of the hour was the formulation of an American foreign policy. The first effort at this undertaking was the Conference on the Foreign Relations of the United States held in May, 1917, at Long Beach, under the auspices of the Academy of Political Science. As an outcome of this a group of persons interested have been meeting fortnightly in New York to study in detail the problems involved. Representatives of various oppressed nationalities and experts on diplomatic history and economics have been called into conference with the committee. President Wilson's successive utterances formed a natural basis for discussion and it became clear to the group that his conception of an association of nations offered the only secure foundation for a durable peace. Accordingly it was resolved to form a wider organization and to establish in all parts of the country groups for the study and promulgation of these principles. Altho the President's program has been favorably received at home and abroad, and has been formally accepted by enemies and Allies, yet it is already apparent that there will be strong opposition to it from those whose nationalistic or private interests are affected by it. Furthermore, the application of these principles will be immensely difficult and will require the careful consideration of the American people for a long time to come. As a result of their deliberations the group has put forth the following as a tentative platform. Men and women who find themselves in substantial accord with its ideas or who are interested in its activities are invited to apply for information to the headquarters of the League of Free Nations Association, which is located at 130 West Forty-second Street, New York City*

THE object of this society is to promote a more general realization and support by the public of the conditions indispensable to the success, at the Peace Conference and thereafter, of American aims and policy as outlined by President Wilson.

The particular aims, such as the liberation of Belgium, Serbia, Poland and Bohemia, and their future protection from aggression, and America's own future security on land and sea, are dependent upon the realization of the more general aim of a sounder future international order, the cornerstone of which must be a League of Nations.

The purposes of such a league are to achieve for all peoples, great and small: (1) Security: the due protection of national existence. (2) Equality of economic opportunity.

Both these purposes demand for their accomplishment profound changes in the spirit and principles of the older international statecraft. The underlying assumption heretofore has been that a nation's security and prosperity rest chiefly upon its own strength and resources. Such an assumption has been used to justify statesmen in attempting, on the ground of the supreme need for national security, to increase their own nation's power and resources by insistence upon strategic frontiers, territory and raw material, outlets to the sea, even tho that course does violence to the security and prosperity of others. Under any system in which adequate defense rests upon individual preponderance of power, the security of one must involve the insecurity of another, and must inevitably give rise to covert or overt competitions for power and territory dangerous to peace and destructive to justice.

Under such a system of competitive as opposed to coöperative nationalism, the smaller nationalities can never be really secure. Obviously Belgians, Jugoslavs, Poles, Czecho-Slovaks will not be secure if they have to depend upon their own individual, unaided strength. International commitments of some kind there must be. The price of secure nationalities is some degree of internationalism.

The fundamental principle underlying the League of Nations is that the security and rights of each member shall rest upon the strength of the whole league, pledged to uphold by their combined power international arrangements ensuring fair treatment for all.

The first concern of a League of Nations is to find out what those arrangements should be, what rules of international life will ensure justice to all, how far the old international law or practise must be modified to secure that end. It is to the interest of the entire world that every nation should attain its maximum economic development, provided it does not prevent a similar development of other nations. The realization

of this aim depends upon a gradually increasing freedom of mutual exchange with its resulting economic interdependence. It is certain, for instance, that if anything approaching equality of economic opportunity as between great and small, powerful and weak, is to be obtained, the following must be guaranteed for all on equal terms:

(a) No state shall accord to one neighbor privileges not accorded to others—this principle to apply to the purchase of raw material as well as to access to markets. Equality of economic opportunity does not mean the abolition of all tariffs or the abolition of the right of self-governing states to determine whether free trade or protection is to their best interests.

(b) States exercising authority in non-self-governing territories shall not exercise that power as a means of securing a privileged economic position for their own nationals; economic opportunity in such territories shall be open to all peoples on equal terms, the peoples of nations possessing no such territories being in the same position economically as those that possess great subject empires. Investments and concessions in backward countries should be placed under international control.

(c) Goods and persons of the citizens of all states should be transported on equal terms on international rivers, canals, straits, or railroads.

(d) Landlocked states must be guaranteed access to the sea on equal terms both by equality of treatment on communications running thru other states, and by the use of seaports.

The first task is legislative in its nature. The problem is to modify the conditions that lead to war. It will be quite inadequate to establish courts of arbitration or of law if they have to arbitrate or judge on the basis of the old laws and practises. These have proved insufficient.

It is obvious that any plan ensuring national security and equality of economic opportunity will involve a limitation of national sovereignty. It is here particularly that the success of the league will demand the doing of the "unprecedented things" mentioned by President Wilson. States possessing ports that are the natural outlet of a hinterland occupied by another people will perhaps regard it as an intolerable invasion of their independence if their sovereignty over those ports is not absolute but limited by the obligation to permit of their use by a foreign and possibly rival people on equal terms. States possessing territories in Africa or Asia inhabited by populations in a backward state of development, have generally heretofore looked for privileged and preferential treatment of their own industry and commerce in those territories. Great interests will be challenged, some sacrifice of national pride demanded, and the hostility of political factions in some countries will be aroused.

Yet if, after the war, states are to be shut out from the sea; if rapidly expanding populations find themselves excluded from raw materials indispensable to their prosperity; if the privileges and preferences enjoyed by states with overseas territories place the less powerful states at a disadvantage, we shall have reestablished potent motives for that competition for political power which, in the past, has been so large an element in the causation of war and the subjugation of weaker peoples. The ideal of the security of all nations and "equality of opportunity" will have failed of realization.

Both President Wilson and Lord Grey have insisted that the creation of a League of Nations must be an integral part of the settlement itself. Both have indeed declared that if it is not established at that settlement, it is never likely to be.

The reason is obvious. If the league is not a political reality at the time that the territorial readjustments come to be discussed; if, as in the past, nations must look for their future security chiefly to their own strength and resources, then inevitably, in the name of the needs of national defense, there will be claims for strategic frontiers and territories with raw material which do violence to the principle of nationality. Afterwards those who suffer from such violations would be opposed to the League of Nations because it would consecrate the injustice of which they would be the victims. A refusal to trust to the League of Nations, and a demand for "material" guarantees for future safety, will set up that very ferment which will afterward be appealed to as proof that the league could not succeed because men did not trust it. A bold "Act of Political Faith" in the league will justify itself by making the league a success; but, equally, lack of faith will justify itself by ruining the league.

Just as the general acceptance of the principles of the league must precede the territorial settlement, so must it precede attempts to reduce armaments. The league should not be, in the first stage, a proposal to relinquish arms, but to combine them; it should be an agreement upon the methods by which they can be used in common for common security. The League of Nations is not an alternative to the use of force, but the organization of force to the end that it may be effective for our common protection.

If nations can be brought to realize that they can in truth look to the league as the main guaranty of political security and economic opportunity, that those things do not demand unwilling provinces as sources of man power or raw material, nor seaports as a condition of economic development, then one of the main obstacles to the liberation of subject nationalities will have been removed, and the solution of the specific problems of [Continued on page 376]

## HOME AGAIN

The return of the first American troops from overseas service gave New York another of its numerous chances nowadays for spontaneous celebration. Four hundred men were aboard, most of them aviators from England; their homecoming to the tune of cheers and tooting whistles was in happy contrast to the enforced secrecy of their departure a year or more ago. Then the great transport crept out of the harbor at night, clothed in darkness and protected under convoy to meet the dangers of a possible submarine attack. Now it returned in broad daylight amid the blare of every noise producer that could be found

# PRACTISING FOR VICTORY

BY HAMILTON HOLT

**I**N my last week's article I described my visit to four great hospitals in the suburbs of London for England's wounded soldiers. This week I purpose to tell something of my trip to Aldershot, the greatest military training camp in England, perhaps the greatest training camp in the world.

Aldershot is thirty-five miles south-east of London. Before the war it was the largest army school and the crack military center of England. But now it is vastly larger than it was then. Besides the various special schools which make up its multifarious complexion, it boasts of a Royal Pavilion for the King when he visits the post and a beautiful clubhouse for officers.

The Duke of Connaught, uncle of George V, is Commander-in-Chief of Aldershot. In 1917 half a million troops were quartered there. Twenty-four siege batteries were being trained at one time and one was graduated every day. When Judge Wadhams and I were there all but one hundred thousand had been sent to the front.

Our first stop was Blackdown, where we visited the First London Reserve Brigade, consisting mostly of recruits being prepared for the front line. Our coming had been arranged beforehand, so wherever we went soldiers were waiting in readiness to show us their various drills and stunts. A bayonet drill was staged for us. It was decidedly realistic to hear the yells of rage the men emitted as they plunged forward and jabbed the straw dummies suspended from the wooden gallows. Some of these dummies had German faces painted on them, the more to excite the ire of the Tommies, as the accompanying picture I picked up on the spot attests. We also saw a practice charge over the top in which four soldiers competed. At the word of command they first fired across the make-believe No Man's Land and then ran down a line for perhaps a hundred yards, jabbing a German dummy here, hurdling a ditch there, scaling a wall, jabbing another German, then jumping over a brock, and finally landing in the enemy's front

trench. The winner's record was one minute and eight seconds.

We next visited the gas school at Claycart Hill. A non-commissioned officer shot a capsule of tear gas from his water pistol against the side of a shed, and altho we were ten feet off, instantly our eyes commenced to water and we blinked and wiped them for fully a quarter of an hour thereafter. The sensation was not so much painful as uncomfortable, for our eyes so filled with tears we were almost blinded.

We were shown also various types of smoke bombs, some for hand grenades and some for time rifles, and a naval smoke gas which the battleships use when they want to hide themselves behind a screen of smoke. I shall never forget the time I stood on a cliff in Bermuda overlooking the ocean and saw three black fishes motionless in the limpid water below. I threw a stone at them and instantly they ejected a cloud of inky fluid into the water which made a screen about them some ten feet in diameter, beneath which I supposed them hiding. When it gradually cleared away, however, the fishes had gone. The smoke barrage acts exactly on the same principle. One small bomb will produce enough smoke to conceal completely a whole fleet of battleships.

At the next field we visited we saw the soldiers firing the Stokes trench mortar. They had no difficulty in sending them off fifty-seven times a minute. This weapon hurls a three pound mortar and only carries a few hundred yards or so. It is a wonderful instrument in firing from one front to the other. Some of these mortars can be fired without being mounted. A man simply steadies it with his hands and knees and another drops the charge into the muzzle, and pulls the trigger.

We were next taken to some model practise trenches and had explained to us the whole theory of trench making and trench fighting. In fact, everywhere at Aldershot we came upon miniature laboratories where the men were being

taught the theory as well as practice of what they were doing. Some of the lines on the Flanders front were exactly reproduced with the first, second and third line trenches and the communicating trenches. Two squads of soldiers were put in these trenches, one representing British troops and the other German. The game was to see which group would capture or kill the other. The two groups at first were fifty yards apart. The officers were standing above to act as umpires. At the word "Go!" both squads advanced in single file, each armed with rifles and hand grenades. When the foremost man would come to an angle in the trench he would charge forward to the next angle ready to jab any enemy in front of him with his bayonet. He could not throw his hand grenade except beyond the angle, otherwise it might kill him as well as the enemy. Thus the lines advanced, each side continually tossing grenades ahead and then jabbing when they got to close quarters. The game was played until one side completely killed or captured all the others. As soon as a man was theoretically killed the officer ordered him out of the trench and the man behind ran up and filled in the gap. The officers told me that in these practice fights as well as in the battles in the real trenches one side very quickly gets the other on the run and then it is merely a question of time when the pursuing group wins. The hand grenades, however, are not used in trench fighting as much as in these practice games. Many more men are killed by bayonets in the trenches than by grenades.

We then saw a drill of long distance hand grenade throwing. The men are not permitted to pitch the corrugated iron ball as our baseball players do, with the wrist and elbow, but the whole arm is thrown forward stiff, just as the English bowlers pitch the cricket ball. It is said that if heavy grenades were thrown like a baseball, a man's arm would soon give out.

Next we were shown a practice exhibition of rifle grenade shooting. We

Learning the practise as well as the theory of warfare at an English training camp with schools for each kind of fighting

had to crouch down behind a protecting earth wall as the guns were fired because occasionally the grenades explode before they leave the gun. The soldiers shot at the targets several hundred yards away and their accuracy was marvelous. As the hand grenades can only be used for cleaning out dug-outs and machine gun nests or when both parties are maneuvering in the same trenches, the armies have to have the rifle grenades for longer distances—such as across No Man's Land.

We lunched at the Officers' Club with General Dorian, Major A. G. Raymond, of the General Staff, and General Sir Thomas Howard. It was beautifully appointed and was of course all that an English country club should be. The dining room, I remember, looked out on a beautifully green turfed cricket ground as smooth and level as a billiard table. The Englishman never forgets his sport.

After a better luncheon than could be got in any of the London hotels we took our car and rode to the gymnasium, where we saw those matchless athletic instructors of the British Army being trained to go back to the front and teach the soldiers the latest things in gymnastics, O'Grady games and individual combat. First we went into a building as large as an armory, where there must have been two thousand young Englishmen dressed in gymnasium shirts and long white trousers. They were the picked athletes of the whole English Army and were doing their calisthenics with a precision and spirit I have never seen equaled anywhere. The "pep," "zing" and "vim" were thrilling. They would rise on their toes as one man and come down on their heels with the report of a rifle shot. I could hear their bones crack as they snapped and jerked their heads, arms, bodies and legs in the perfection of rhythmic unison. We then went out of the armory to the campus, where several thousand more would-be athletic instructors were practising. Some of them were going thru the O'Grady games, which are "all the rage" in the English and American armies. Most of these games are about as sensible as "drop the handkerchief" or "ring around the rosy." But they are said to refresh and relax the men as nothing hitherto invented. Moreover they make them supple and alert without tiring them.

Not only are the bodies exercised by these O'Grady games, but the mind, too. For instance, the officer who showed me around said to the soldiers, "Get me something green." Immediately the men went racing in all directions, one picking up a blade of grass, another a green sweater and another a green bordered handkerchief out of a lady bystander's hand. The one who got back to the instructor first with his green object won. All sorts of games are played: push ball, medicine ball, potato races, and most of the old games that other people try only on pictures. In addition I noticed several games entirely new to me, such as jumping the bag, whip to the gap,

changing places, circle touch ball, bomb ball, etc. The value of these games consists in the fact that they have to be practised with the utmost amount of energy and snap and with rigid observance of all the details. In this way they inculcate discipline and develop quickness of brain and movement, whereas if carelessly carried out they may do more harm than good. They have been found especially efficacious when interspersed between the more serious drills. But the proof of the pudding is in the eating, and it is a fact

"German faces to excite Tommy's ire"

that the British army's morale has improved 25 per cent as a result of these stunts.

After enjoying the sport on the greensward for half an hour we walked over to another field, where a bayonet drill was going on. Each soldier is taught how to defend himself in case he gets separated from his comrades and is attacked by the enemy. Instruction is given in a sort of jiu-jitsu by which a disarmed soldier can ward off and disarm his opponent. Sometimes tricks are played upon the men to make them think quickly in an emergency. For instance, our escorting general ordered a squad to go "over the top" and to stab with ferocious yells some dummy Germans. The men knew beforehand what their objectives were, but just as they raised their bayonets the straw dummies were jerked ten feet to one side. The assaulters were marked for the quickness and rightness with which they made their decisions, because in one case it would be better to go on and leave the Germans intact and in another to stop and stab them.

We then went to Farnborough, where we visited the Southern Aeroplane Repair Depot. This was one of the largest of the many aerodromes in England. A dozen aeroplanes were in the air as we entered the grounds and hundreds of others were out on the great field in front of the numerous hangars. Some of England's swiftest planes gyrated over our heads, flying at the rate of 130 miles an hour. We saw one of the giant Handley-Page four-propeller bombing planes waiting

to go up. It measured one hundred feet from wing tip to wing tip. It carried nearly a ton of bombs and a crew of two pilots, a bomber and observer and three helpers.

There was no more interesting building on the grounds than the aeroplane hospital, where we saw hundreds of damaged English and German planes. They were coming from the front every day and were being taken apart, the good parts to be used in new machines and the rest sent to the junk pile.

Here we saw hundreds of "Waacs" and "Penguins" working. England is the only nation that has allowed women in her army, unless it be Russia and her Battalion of Death. The Waacs (Woman's Auxiliary Army Corps) consist of many thousands of British women who have enlisted in the army, wear a regular khaki uniform, and live under strict military discipline. At least twenty thousand of them serve close behind the front lines in France as waitresses, housekeepers, clerks, chauffeurs, stenographers, etc., while many more are stationed in posts all over England. The Waacs are auxiliary to the army. The penguins, of course, are part of the Royal Air Service. They are the birds that cannot fly. The "Wrens" (Woman's Royal Naval Service) are attached to the navy. While working in the factories side by side with men the women usually discard their military uniforms and don the farmerette khaki bloomer costume. Women are said to make the very best light mechanics, especially in the work of repairing the wings of the aeroplanes. Wherever I went they seemed to be enjoying their new vocations.

No instruction in flying was being given at Farnborough. It was simply a repair shop and manufacturing center. We noticed a colossal barn-like building for the stabling of English zeppelins, but it was locked at the time and we did not have time to hunt up the key. England uses her dirigible balloons almost exclusively at her naval bases so as to see the approach of enemy ships. We saw no American troops at this field, tho we were told that some of the American aircraft officers were there for instruction. But we noticed many German prisoners working about the shops and hangars, and a well fed and contented lot of Fritzies they looked.

Thus was completed our day at Aldershot and its subsidiary centers. Before I went abroad I visited six of our best American camps, but I must frankly say that nothing we then had in America could compare with Aldershot. I do not refer to physical equipment, for in fundamentals our camps are as well supplied as any in Europe. I refer rather to the type of training that was offered at Aldershot. The very latest ideas from the battle front were tested there and actual battle conditions were reproduced with almost perfect exactitude. There can be no better place on earth for a soldier to get his training than this great English camp, with its wonderful spirit and model technical equipment.

# GAINS AND LOSSES OF THE COLLEGE REVOLUTION

BY CHARLES F. THWING

PRESIDENT OF WESTERN RESERVE UNIVERSITY

THE transformation of the American college of liberal learning into a military professional school of short terms has been made. Already certain gains and also some losses in educational values are made manifest. These gains and losses belong primarily, tho not wholly, to the soldier-students for whom the military college exists.

Among the gains is to be noted an increase in the formal courtesy and good manners of the students. The uniform may or may not be becoming to the individual taken by himself, yet it is becoming and certainly impressive when it is seen upon a hundred or a thousand men. The manners of these men have become such as belong to gentlemen. Salutations are given with greater constancy and fitness. Not that these items are at all of primary significance, but they do have at least some value, value inward as well as outward, for good manners make the ordinary doing of life a bit more easy and they increase genuine self-respect.

It is also clear that the regular habits of the student tends to promote health. The habits of the older college men were not habits: they were rather violations, conscious or unconscious, protests, anarchisms. The former college man slept at all hours or no hours at all. He ate at all hours or did not eat at all, and he ate, when he did eat, what he liked. He exercised in such ways as pleased him and too often it pleased him not to exercise at all. He studied much or he studied little, and at such times and places as suited his daily or hourly convenience. Tho such an interpretation appears to be a little too general, yet there are scores of college men in every hundred to whom it could be fittingly applied. Contrast with such disorderliness a program such as obtains in essence at most colleges: the reveillé at 6:30, breakfast at 6:45, drill at 7:30 to 9:30, from 9:30 to 12:15 study or recitations, 12:15 mess, 1:30 to 4:30 study or recitations, 4:30 to 5:45 recreation, 5:45 to 7:30 mess and recreation, 7:30 to 9:30 study under supervision, 10:00 taps. Such a program promotes health.

Akin to this advantage is a third gain, to wit, students are looked after by the military collegiate authorities. The authorities know where each student is, and how he is, and what he is doing with his time and with his own personal self. Supervision is constant and detailed. Such vigilance is quite unlike the old academic *laissez faire*. I know very well the advantages and disadvantages of each method. *Laissez*

*faire* properly applied develops individuality, initiative, independence—and these are among the mighty marks of mighty character. *Laissez faire* improperly applied develops rashness, waste, intellectual and ethical, and frequently wretchedness and ruin. Supervision, properly used, promotes economy in spending all one's forces, progress, efficiency and desired consumma-

© Underwood & Underwood

Student soldiers at drill before the Columbia University Library

tion. Supervision improperly used, applied too constantly or too closely, tends to promote the infantile mind and will, without vigor and directness or personality. It protects innocence; it kills achievement. I venture to say that the older colleges, or at least many colleges of the older times, erred on the side of giving too little supervision or too great freedom to the college student. They thought the student was a man. He was, but he was not quite so much of a man as they were inclined to believe. Therefore, they gave him an independence which he could not use well, and he wasted himself. The military college may be inclined to use a vigilance too constant or too exact, but the reaction from the older system is not unfitting. And this vigilance touching academic conduct and bearing produces good results.

Such watchfulness insures another gain. It is the gain of industriousness. The college man, made a soldier, works. He labors at his studies some eight hours a day or forty-eight hours a week. He labors at his drill some ten hours a week. He thus unites the eight-hour day of the carpenter and the stone mason and the ten-hour day of the journeyman of the former time. Happy man! If he be poor or semi-poor in purse—and one-half of the earlier college men earned money to self-support—he is not obliged to spend time in earning his keep at 25 cents an hour, but this time he can use in working his

brain; and be it said that to teach men how to work their brains is a primary purpose of the college. If he is rich or half-rich, he has no leisure in which to spend money or to loaf. His mood is—Attention. The college man works now—and to teach men how to work effectively is also a chief end of the higher education. More work is done, and better work, too. The gain is both quantitative and qualitative.

A further gain is also apparent in the increase in the democratic spirit of the college. The soldier's uniform is typical. One of the first things which the authorities do to men on their induction into the Students' Army Training Corps is the taking of their fraternity pins. One oath is administered, one mess is spread, one camp life is provided, one drill is required, one set of tactics is learned and practised, one comprehensive duty is imposed. Of course, individualities are respected. Of course, the life of the officer is made unlike the life of the man of the ranks. Separateness between the officer and a private is emphasized with a stress which the civilian does not understand; but

such separateness is declared to be necessary for orderliness. Yet the general zones and strata of social demarcations which in some colleges have been too characteristic, are cut down or largely wiped out.

But there are losses in educational values arising from this revolution. These losses may be very largely put into the singular number, for the sum of them is a single loss. It is the loss of the higher education. It is the loss of culture. It is the loss of intellectual breadth. It is the loss of liberal learning. It is the loss of a sense of relationships, of a certain intellectual freedom in knowing and in judging subjects, movements, men. A well roundedness and a balance, a power of reasoned judgment and large humanness, a sense of considerateness for contrary principles and motives, means and methods, a willingness to listen and to reflect, a quality of weighing evidence and of assessing truths and facts at a just value, a genuine intellectual altruism: these are the qualities and marks of the higher education which are brought into jeopardy. The liberal education helps to make each citizen of the nation a freeman of the intellectual realm: the education which is not liberal may not liberate the mind, but enslave it. Of course, breadth may easily become vagueness, liberality looseness, as easily as individuality may become narrowness; but to preserve the value of breadth and of liberality without

peril, is the goal of the higher education. But it may be said at once that culture or cultivation is secured as much by the teacher as by the subject taught, be the subject even the great literatures or philosophies. For a boor may so teach Greek as to create boors, and a scholar may so teach carpentry as to promote scholarship and to nourish scholars. The remark is true, and it is to be believed, that several of the required military subjects will be taught with a sense of large relationships, which will tend to develop men of greater thoughtfulness and appreciation.

To another privation lying in a lower and different realm, perhaps I ought to refer. It is the lack of that culture and inspiration which come from the formal services of religion. Of course, the camp should have its religious officers and societies. Every regiment has a chaplain or chaplains. The Y. M. C. A. in many and diverse ways performs a great service. Yet that place which the college chapel fills in the usual academic order is lacking in the military college. Religion in college should represent the broadest teachings: it should embody at least these principles: First, love as the law of life; second, perfectability of the race; third, the personality of God; fourth, the immortality of the individual soul. The atmosphere which clusters about a proper daily chapel service the new college is liable to lack. Such a service represents not only religion as such, but also religion as an inspiring part of culture and a necessary element in the character of the individual man.

I should refer to one greater condition which results from this academic transformation. It may be said to lie in the educational No Man's Land, to wit, the condition of the ordinary undergraduate undertakings. These undertakings had become in the earlier time too numerous. Avocations had displaced the vocation of the college undergraduate. Yet avocations had and have their function to perform. The college newspaper and magazine, daily, weekly, monthly, the musical and dramatic clubs, the debating and literary societies, the athletic associations, these and many similar organizations and forces have ceased to be, or at least have ceased to live a vigorous life. To some students these informal forces were and are the best of the college. To others they serve as leeches, drawing away the real academic blood; but whether for good or for ill or for *nil*, they have practically ceased to be.

Yet, when all is said, it is ever to be emphasized that these college men have responded to an unexampled call with fullness of heart and swiftness in action. They have answered the great commands with promptness and enthusiasm, with wholeheartedness and whole-souledness. Such a response is the high watermark of one great value of the higher education. It is proof that the higher education has won a supreme aim, the aim of nourishing men, who, at the call of duty, give themselves in unselfish service to their fellows.

Restrictions placed on the use of tin plate in the manufacture of food containers have been removed.

Reports from the United States Employment Service show that women have engaged in railroad tank painting, hardware industry processes, garage management, and ranch work, as well as many other industries untried by them before the war.

A young Japanese girl has obtained a license as sea captain. When she applied for a license the authorities hesitated, for she was the first woman who had ever sought recognition as a skipper. As there was no provision permitting discrimination on account of sex, the license was issued.

Two Big Dishes Quaker Oats Cost 1c

## Your Choice For a Penny

A Bite of Meat  
Costs 1c

A Spoon of Peas  
Costs 1c

Or a Prune Costs 1c

Here is a lesson which no housewife should forget.

A penny's worth of Quaker Oats supplies two generous servings.

These two dishes will supply 200 calories of energy.

Think of that—two dishes at the cost of a bite of meat, or a spoon of peas, or a prune.

Those 200 calories, which cost one cent in Quaker Oats, cost in other foods at this writing as follows:

### Cost of 200 Calories

In Round Steak	•	•	•	8c
In Veal Cutlets	•	•	•	11c
In Halibut	•	•	•	11c
In Salt Cod	•	•	•	16c
In Canned Peas	•	•	•	11c

Meats will average ten times Quaker Oats' cost for the same energy units. Fish will average twelve times the cost. And some common foods will run up to twenty times the cost.

Just figure out how Quaker Oats reduces breakfast cost.

But it does more. It supplies almost the ideal food. It is rich in body-building protein, rich in iron, lime, phosphorus, etc.

Make it your main dish at breakfast. Use it for muffins and pancakes. Mix it with your flour foods.

## Quaker Oats

Oat Food at Its Best

Make your oat foods delightful by using Quaker Oats. They are flaked from queen grains only—just the big, rich, flavorful oats. We get but ten pounds from a bushel.

These luscious flakes cost you no extra price. Specify them when you order.

Two Sizes: 12c to 13c—30c to 32c  
Except in the Far West and South

(2044)

# PHANTASMS OF WAR

## Bei Nächtlicher Weile

BY AMY LOWELL

Thieves have taken away bronze worth thousands of dollars from the Pocasset Cemetery in Cranston. An attempt was made to take away a bronze statue weighing 400 pounds, but the invaders were able to get it only as far as the cemetery fence. The men were surprised in an attempt to wrench off the doors of a big tomb.—Daily News Report.

Thru the leafless trees of a bleak November  
Shines the waning moon like a half-quenched ember.  
The gravestones are green in the low, cold light  
And the church-clock strikes . . .

Twelve long strokes for the hour of midnight  
Twelve long strokes thru the break trees wander,  
And the moon is dim like a dying ember.

Steps down the hard road  
Ring as on frozen metal,  
Steps . . .  
And, "Hist! You Fool!  
Softly will you."  
Over the wall,  
A gentle fall on stiff grass,  
Another,  
Then a third,  
And the flashing of a lantern  
Like a thread of gold cutting thru green water.

Hans, and Carl, and Nicholas,  
Beside the green-white gravestones pass,  
Pass the tombs of the Robinsons,  
The Browns, the Prescotts, the Middletons.  
Down the long alleys of the dead  
Glimmers their lantern's thin gold thread.  
Shimmers,  
Glimmers,  
The lantern light,  
They are swimmers in the green, cold night.  
*Rhine-gold*,  
Treasure-trove in a graveyard,  
Gnomes of old German tales,  
The wind thru the leafless branches wails.

Is that another lantern  
Away off on the right?  
No, only the reflection from a bronze urn on a pedestal.  
Huddle together,  
Hans, and Carl, and Nicholas,  
That bronze gleam means gold for you.  
Gold wrenched out of a green, secret silence.  
There are no Rhine-maidens guarding this gold,  
There are only the shadows you think you see  
Gliding about among the tombs.

Clink your cold chisels like bright little bells  
Tinkling a festival.  
Knock sharply at the bottom of the urn.  
Lower it, Carl,  
Catch it, Hans,  
That will mow down a fine lot of Yankees  
When it is cast into cannon-balls.  
*Donner und Blitzen!*  
Shells and shrapnel—  
And the Prescotts, and Browns, and Middletons  
Sleep quietly under the stiff, cold grass.

Hans, and Carl, and Nicholas,  
Between the rows of headstones pass.  
Beyond the tree-trunks, a fading ember,  
Hangs the waning moon of late November.  
The leafless branches click and moan  
And the church-clock strikes . . .

One slow stroke for the hour of one.  
One loud stroke, and the doors of a tomb  
Hum back the note thru the hollow gloom.

Damn the doors!  
They sound as tho all the dead citizens of Pocasset  
Were calling from under the ground.  
Strike harder, Nicholas,  
Strike out new bell-notes to drown the old.  
Your beloved Kaiser  
Will pay you for this in good American money,  
And give you an iron cross for all this bronze.  
God save us!

It is the head of the Christ  
Leaping up in fire!  
Nicholas drops his crowbar,  
But Hans shuts the lantern,  
And claps him on the shoulder.  
"You miserable moon-calf!  
That's only a carved picture.  
But it's carved out of good, hard bronze.  
*Unser Gott* guided our steps this night."  
The hammers shower diamond sparkles into the pale moonlight.

Fir-trees wave in the chill night wind.  
*Tannenbäume, und Christ-kind*,  
Colored candles, and *marzipan*.  
For the Lord's sake, Nicholas,  
Be as quick as you can.

Hans, and Carl, and Nicholas,  
Up and down the graveyard pass.  
There is a shadow across the path,  
A strong, black line,  
Cleaving the misty, greenish wreath  
Flung by the low-hung moon. Beneath  
It stand the three—the branches blow,  
And the church-clock strikes . . .  
Two heavy strokes for the hour of two.  
Two thick strokes, but the shadow does not waver.  
Only the splashes of lantern-light quaver.

General Slade  
Standing on his granite column,  
Dominating the other graves.  
General Slade,  
Who was killed at the battle of Cedar Creek,  
And has stood here for fifty-two years,  
Scorching in Summer,  
Freezing in Winter,  
In his uniform of a Union General,  
With his tasseled sword,  
And an eagle and a flag  
Carved in the granite below him.

Vaudeville nights come to the rescue!  
Up, over Hans, over Nicholas, goes Carl,  
Stands upright clinging to the General's crook'd arm.  
A Union General is nothing to a hyphenate.  
*Gold and Das Vaterland!*  
And a snug little business in Providence,  
Which everybody will say is due to thrift.  
Loosen the bolts,  
Drop him, we do not mind dents,  
He is no work of art to us,  
No General of a victorious army,  
Just four hundred pounds of shot.

To fight the country he died for.  
Pitch him over.  
God! He makes a noise like a church-bell  
As he strikes.  
And his cold bronze face  
Is upturned to the sinking moon,  
And his eyes flash and glitter  
So that we dare not look as we drag him away.  
Hans, and Carl, and Nicholas,  
Down the empty graveyard pass,  
Dragging a man in effigy  
Whose eyes are glinting horribly.  
They gleam and twinkle in the green, cold light  
And there are rustlings and snappings abroad in the night  
And foggy shapes which rise and float,  
And sharp, bright points which gaze and gloat.  
The graveyard is full of Robinsons,  
And Browns, and Prescotts, and Middletons,  
Rising up at the General's call.  
Hundreds of headstones to reach the wall,  
Each one covering a long-dead man;  
They heave and stir, and beyond the span  
Of the lantern's circle are things which move.

And the branches snarl and grind above.  
Hans is muttering a German prayer.  
Carl is sobbing. "Are we almost there?"  
Nicholas whistles a Lutheran tune.  
A grey cloud slowly quenches the moon.  
Here is the wall, but strangely high.  
Is it only a bat which blunders by?  
The moon has sunk, but a hard, blue beam  
Comes from the General's eyes, a gleam  
Which winks and glimmers horribly.  
The church-clock strikes . . .

Three great strokes for the hour of three  
Three great strokes. We must leave him  
there;

We can't heave him over, and his eyes  
cold glare

Lights up the names on the other graves.  
Listen to Nicholas, how he raves!

"The damned dead statue of a damned dead  
man

To give us away!" Quick, while you can—  
Over the wall and make off with the loot.  
Nicholas, Carl; and Hans follows suit.

Down the road goes the quiver of their  
lantern's light.

The church-clock strikes all the hours of  
the night.

Till the sun rises up like a new-kindled  
ember

And gilds the leafless branches of late  
November.

## THE FUTURE OF OUR AMERICAN SHIPPING

(Continued from page 361)

And Mr. Hurley points out that it is not really a loss in the sense that the destruction of high-cost munitions constitutes a loss. To the contrary, he says, we got as the fruits of victory a great deal of experience which is now our stock in trade. And anyway, it seems, the period of the emergency provided by Congress for the governmental employment of the new industry is not over and will not be until the President says so.

America has not, as yet, a great merchant marine, but Mr. Hurley, Mr. Schwab and the others of the Shipping Board are authority for concluding that we are on the way. We need, as much as the smaller nations do, perhaps more, because our trade is so extensive, a pooling arrangement of all the ships of the world, in order to do our share to rebuild Europe. And we need, in anticipation of the end of this pooling arrangement, if it is achieved, all of the 25,000,000 tons planned for, to represent America. Why we need it is interestingly told by these figures: In 1860 exactly sixty-five per cent of the total value of our imports and exports was carried in American ships. In 1865 this percentage dropped to twenty-eight. In 1870 it was thirty-six. In 1889 it had gone down to fifteen. And in 1915 it was less than nine per cent. According to the latest figures obtainable, which are published here for the first time, during the war period down to October 1, 1918, the British built 4,000,000 gross tons of shipping and the Americans 2,500,000. The British lost 8,896,280 gross tons, the United States lost only a little over 1,000,000 tons. The excess of losses over gains for the British amounted to 3,900,000 gross tons, whereas our excess of gains over losses amounted, including seizure of German ships and transferred lake ships, to 2,228,862. But on June 30, 1914, of the world's total tonnage, 49,089,752 gross tons, seventy-five per cent of which was over 500 tons, or seagoing, a little over twenty-one million gross tons flew the British flag and only 5,459,296 flew the Stars and Stripes.

It is clear that we have room to grow. It is clear that we have a long way to go.  
Washington, D. C.

# False Notions On Teeth-Cleaning

*All Statements Approved by High Dental Authorities*

## They Ignore the Film

The old idea of brushing teeth was to remove food particles. Some ways also aimed to polish teeth.

But time soon proved those methods insufficient. Teeth still discolored, still decayed. Tartar formed, and pyorrhea remained undiminished. Statistics show that tooth troubles constantly increased.

Millions of users have discovered that the tooth brush fails to save their teeth.

Now science knows the reason. It lies in a film—a slimy film—which dentists call bacterial plaque. It constantly forms on the teeth, and it clings. It gets into crevices, hardens and stays. Old-time

brushing methods could not properly combat it.

That film is what discolors, not the teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus tooth troubles are largely traced to that film.

Science now has found a way to combat that film. It has proved itself to many able authorities by four years of clinical tests. Today it is embodied in a dentifrice called Pepsodent. And we offer you a Free tube to let you prove it out.

## The Scientific Way

As a cleanser and polisher, Pepsodent holds supreme place among tooth pastes. But it also goes further.

It is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

But pepsin alone won't do. It must be activated, and the usual activating agent is an acid, harmful to the teeth. So pepsin long seemed forbidden.

Now science has found an activating method harmless to the teeth. Five governments have already granted patents. That method, used in Pepsodent, makes the use of active pepsin possible.

Before it was offered to users, able

dental authorities proved its value by clinical tests. They placed its results beyond question. Now we offer the proof to you in the shape of a home test.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch results. Note how clean the teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

A week's trial will convince you that Pepsodent does what nothing else has done. You will see that your teeth are protected as they never were before. You will not return after that, we think, to any old-time method.

Cut out the Free coupon now.

# THE NEW BOOKS

## Knowledge About the War

IN April of nineteen eighteen, the National Conference of American Lecturers met to organize the American platform into power to win the war. There were 192 delegates from all parts of the country who for five days listened to a series of addresses delivered by some of the most distinguished men and women of our time, and left to diffuse a greater understanding of all the problems which arise in connection with the war.

Because, however, it is impossible for the human mind to retain impressions and facts as numerous as were offered during this convention and because no matter how widely they are diffused there will still remain thousands of people who are ignorant of them, the forty-five addresses have been brought together in book form and called *What Every American Should Know About the War*.

It is stating it mildly to say that they make an immensely interesting and instructive volume. When such men as Hoover, Samuel Gompers, André Tardieu, and John Bassett Moore and such women as Mary Synon and Kathleen Burke give us the best of their thoughts about the phase of the war with which they have been most directly concerned, the result is bound to be noteworthy.

The justification for the war, the social changes which it has brought about, its economic interpretation, its cost, and the work of the women at the front, as well as other questions equally engrossing, make up the list of subjects.

*What Every American Should Know About the War*. Edited by Montaville Flowers. George H. Doran Co. \$2.

## Fighting France

THIS short and readable book by the brilliant French journalist who became editor of *Le Matin* at the age of twenty-seven, is one which will provoke much comment. The first three sections on why and how France fought and on her present condition, cover familiar ground, altho in an individual way. But the fourth and last chapter deals with many vexed and unfamiliar points, which are of the most vital moment. It is entirely devoted to the war aims of France, and gives a more definite and detailed account of them than has usually appeared elsewhere.

*Fighting France*. By Stephane Lauzanne. D. Appleton Company. \$1.50.

## War Time Travels

THIS new book of Winston Churchill's has a few chapters of fleeting impressions gathered in a hasty trip, unexpectedly cut short, thru France and England; it has also another chapter of an essay on what we, as Americans, are contributing to the war. The sketches of France and England at war are vivid and striking. There is, but briefly, the fighting front, lightly touched upon; there are, more in detail, pictures of provincial France, peaceful and seemingly unchanged on the surface, but with the sad, brooding melancholy always underneath, yet relieved by the spirited and dauntless courage of the

French, renewed as they turned to us and said, "Vous venez nous sauver, vous Américains!"—"You come to save us." Most illuminating and entertaining as well is Mr. Churchill's account of wartime England.

From France and England we come to America and the American contribution:

In 1916 the majority of the American people elected Mr. Wilson in the belief that he would keep them out of war. In 1917, he entered the war with the nation behind him. A recalcitrant Middle West was the first to fill its quota of volunteers and we witnessed the extraordinary spectacle of the endorsement of conscription. What had happened? A very simple, but a very great thing. Mr. Wilson has made the issue of the war a democratic issue, an American issue, in harmony with our national hopes and traditions.

*A Traveler in War Time*, with an essay on the American Contribution and the Democratic Idea, by Winston Churchill. Macmillan Company. \$1.25.

## The United States of the World

THE question of a League of Nations has become the dominant issue of the day and to this question Professor Kallen, of the University of Wisconsin, makes a notable contribution in his volume on *The Structure of Lasting Peace*. The chief difficulty in the way of a permanent settlement is that the conception of nationality has become confused with state sovereignty. But nationalities inevitably and rightfully exist inside the state or divided among several states. So, he argues, freedom of nationality can only be attained as freedom of religion has been, that is by completely disentangling the state from nationality. This involves a world organization similar to that of the United States of America, or to put it in his own words:

With this we have established the full pattern of the house of peace—an international democratic congress, limiting armaments, judging disputes, coördinating and harmonizing the great national institutions by means of which men get food and clothing and shelter and health and happiness, making for a free exchange of all excellence, punishing default with interdict or excommunication or war, resting its authority upon public opinion and strengthening it by internationalized education.

Besides this, the main thesis, the volume contains many ingenious and original suggestions. For instance, in repudiating the Bolshevik peace formula of "no annexations, or indemnities," he argues first that Germany ought to be made to pay for the ruin she has caused:

There are, hence, two sets of considerations for the peace conference to heed in the financial adjustments between the German Government and people and the democratic powers. The first of these is reparation for goods stolen and damage done. All levies should be returned, with interest at an appropriate rate. All forced labor should be paid for, at twice the market rate, because it was forced, with interest at an appropriate rate. For the murder of helpless civilians there can be no adequate compensation, but their dependents should receive a pension at the hands of the German nation. All property wantonly destroyed should be paid for, with an additional contribution for the absolute loss involved.

But compensatory or punitive damages are in themselves not enough to remove the German peril. Since German aggressiveness has resulted from perverted education Germany should be compelled to pay for her

reëducation in accordance with the ideals of liberal nations:

The precedent derives from the relations between the western powers and China, and its application—in the form established by the United States—to their relations with Germany cannot but be liberal and liberating. When the western powers exacted from the quite helpless Chinese Government and people indemnities for the damage done by the Boxer rebellion of which this Government and people was a victim even more than they, the United States alone, of all the powers, directed the application of its share to defraying the expenses of educating young Chinese in America. Let the democratic powers follow this precedent with regard to the Government of Germany. Let the terms of peace require that one young German out of every thousand, both men and women, shall from his or her twelfth year on be educated abroad—in the United States, in England, in France, in Italy, or in Russia. An indemnity should be required to defray the cost of so educating the new generation. The money of this indemnity ought not, however, to be raised by taxes from the German people. It ought to consist of a trust-fund, created by confiscating all the properties of the royal families of Germany, and of the great German landlord class, the junkers. This trust might be held and administered by an international educational commission for the good of mankind.

*The Structure of Lasting Peace*, by H. M. Kallen. Marshall Jones Co. \$1.25.

### Patriotism and Religion

UNDER the title *Patriotism and Religion*, Dr. Shailer Mathews, dean of the Divinity School of the University of Chicago, has published his series of four lectures—The Kinship of Patriotism and Religion, The Moral Value of Patriotism, Religion and War, and The Service of Religion to Patriotism—delivered at the University of North Carolina in May, 1918. The main theme, the close relationship between religion and patriotism, is treated in a broad sense historically, with emphasis upon the two types of patriotism exemplified by Germany and by democratic countries, and their respective religious significance. Perhaps this subject may sound a bit stale now that the war is apparently over, but in reality Dr. Mathews has a message that is not only of timely but of permanent interest. He says in his preface:

It may be that they may hearten some of those who, without abating their devotion to the cause of international peace, have been forced by the course of events to see no possibility of attaining that goal until the world is delivered by war from the menace of German imperialism. At all events they are a sincere attempt to estimate two of the spiritual forces that underlie social evolution.

*Patriotism and Religion*, by Shailer Mathews. Macmillan Co. \$1.25.

### The Inside of War Work

DR. SCHERER, author of *The Nation at War*, was for a year the chief field secretary for the State Councils of National Defense. In this capacity he traveled all over the country helping to organize the state councils and to coordinate them with the central council in Washington. Most of us have very little knowledge of just how much the Council of National Defense has done in furthering war work. We are apt to take war organizations, movements and achievements as a matter of course.

To such of us this book will be illuminating and informational. He gives us facts but he also gives us much more. He shows us how the Council of National Defense went about the task of educating the people of the United States to the war idea and of gaining the cooperation of every single person to this task. He interprets, moreover, with insight and sympathy the psychology behind this work and its results. His book is not profound, nor does it pretend to be. It is "nothing unless a human document—the story of an American life in relation to the Great War—the record of a personal experience, and should be accepted as such."

*The Nation at War*, by James A. B. Scherer. George H. Doran Co. \$1.60.

Women's Hand-Embroidered and Initialed, 50c Each.

## McCutcheon's Christmas Handkerchiefs for Men and Women

IN THIS YEAR of useful gifts, we suggest Pure Linen Handkerchiefs from "The Linen Store" as most appropriate remembrances for both men and women.

We have never had a finer selection of Handkerchiefs, of all kinds—plain, Hand-Embroidered, and Initialed—than is now on display on our Main Floor.

Holiday Handkerchief purchases will be packed in McCutcheon "Spinning Wheel" boxes upon request.

#### For Women

A fine selection from which to choose.

*Swiss*, Hand-Embroidered, 50c, 65, 75, \$1.00 each and up.

*Spanish*, Hand-Embroidered, 35c, 50, 65, 75, \$1.00 each and up.

*Irish*, Hand-Embroidered, 25c, 35, 50, 75, \$1.00 each and up.

*Madeira*, Hand-Embroidered, 35c, 50, 75, 85, \$1.00 each and up.

*Initialed*, \$3.00, 4.00, 6.00, 7.80 per dozen and up.

Reg. Trade-Mark

#### For Men

Good serviceable Handkerchiefs, initialed or with Cord, Cross-bar and Tape effects, that are sure to please "Him".

*Initialed*, \$6.00, 7.80, 9.00, 12.00 per dozen and up.

*Plain-Hemstitched*, \$4.00, 6.00, 7.50, 9.00 per dozen and up.

Generous in size, wide or narrow hems.

*Khaki Linen for Army Men*, 65c and 75c each.

MAIL ORDER SERVICE: Any of the Handkerchiefs described or illustrated may be ordered with complete satisfaction through our Mail Order Service.

## Training for Authorship

How to write, what to write,  
and where to sell.

Dr. Eisenwein

For many years editor of *Lippincott's Magazine*, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching*.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—'play work,' he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, essential, valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## LEAGUE OF FREE NATIONS

(Continued from page 364)

Poland, Alsace-Lorraine, Bohemia, Jugoslavia, and the self-determination of the peoples of Turkey and Russia, will have been enormously facilitated.

The administrative machinery of a workable internationalism already exists in rudimentary form. The international bodies that have already been established by the Allied belligerents—who now number over a score—to deal with their combined military resources, shipping and transport, food, raw materials, and finance, have been accorded immense powers. Many of these activities—particularly those relating to the international control of raw material and shipping—will have to be continued during the very considerable period of demobilization and reconstruction which will follow the war. Problems of demobilization and civil reemployment particularly will demand the efficient representation of labor and liberal elements of the various states. With international commissions, and exercising the same control over the economic resources of the world, an international government with powerful sanction will in fact exist.

The international machinery will need democratization as well as progressive differentiation of function. If the League of Nations is not to develop into an immense bureaucratic union of governments instead of a democratic union of peoples, the elements of (a) complete publicity and (b) effective popular representation must be insisted upon. The first of these is implicit in the principle, so emphasized by President Wilson, that in the future there must be an end to secret diplomacy. The second can only be met by some representation of the peoples in a body with legislative powers over international affairs—which must include minority elements—as distinct from the governments of the constituent states of the league. It is the principle which has found expression in the American Union as contrasted with the Federated States of the German Empire. If the Government of the United States consisted merely of the representatives of forty-eight states, the Union could never have been maintained on a democratic basis. Happily it consists also of the representatives of a hundred million people. The new international government must make the same provision and deliberately aim to see that all the great parties and groups in the various states obtain representation.

The assurance of the political, civil, religious, and cultural rights of minorities within states is an even more difficult problem. But genuinely democratic parliamentary institutions in the league, ensuring some expression of minority opinion as well as complete publicity, will be a strong deterrent if not a complete assurance against tyrannical treatment of minorities within its constituent states.

Indispensable to the success of American policy are at least the following:

"A universal association of nations based upon the principle that the security of each shall rest upon the strength of the whole, pledged to uphold international arrangements giving equality of political right and economic opportunity, the association to be based upon a constitution democratic in character, possessing a central council or parliament as truly representative as possible of all the political parties in the constituent nations, open to any nation, and only such nation, whose government is responsible to the people. The formation of such an association should be an integral part of the settlement itself and its terri-

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For information write to MISS AGNES S. WARD, Superintendent

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

## Spend the Winter at LAKELAND FLORIDA

Save the high cost of living, escape worry over coal shortage, enjoy the delightful climate.

Where you may secure a fine income by investing in a 10 acre grapefruit or orange grove. Scientifically cared for by low cost operating methods.

C. E. BROOKS, 4901 State St., Marshall, Mich.

torial problems, and not distinct therefrom. It should prohibit the formation of minor leagues or special covenants, or special economic combinations, boycotts, or exclusions. Differences between members should be submitted to its judicial bodies. Its administrative machinery should be built up from the inter-allied bodies already in existence, expanded into international bodies differentiated in function and democratized in constitution. The effective sanction of the association should not be alone the combined military power of the whole used as an instrument of repression, but such use of the world-wide control of economic resources as would make it more advantageous for a state to become and remain a member of the association and to cooperate with it, than to challenge it."

All the principles above outlined are merely an extension of the principles that have been woven into the fabric of our own national life.

In search of freedom, our forefathers turned their faces to the West, set out across the Atlantic, and laid the foundations of an American commonwealth. Even in the free spaces of the New World they could not attain independence, unity, and democracy, in such measure as we now possess them, without struggle. It has remained for our generation, with these things not wholly achieved, to turn our faces toward the East and set out overseas across the Atlantic to aid the peoples from whom we sprang to achieve those things in the midst of the more rigid social fabric of the Old World, and against the forces of despotism, autocracy, imperialism, privilege, and militarism, which found their supreme embodiment in the Prussian scheme of world dominion.

In war and in settlement we stand for the principles which have shot thru each of the great epochs of American struggle. In our War of the Revolution, in which we ourselves struck for independence and nationality, we established tradition which prompts us to stand for the freedom and self-determination of the weaker peoples; for restoration and reparation for Belgium and Serbia; a united and independent Poland; justice to the peoples of Alsace-Lorraine; recognition of the Czechoslovaks and the Jugoslavs; the freedom of the Russian Revolution to achieve its own destiny. And in our championship, thru the Monroe Doctrine, of the lesser American states, we supported in one hemisphere this fundamental principle which we now urge as a basis for both.

In our Civil War, in which we determined whether in the New World a nation conceived in liberty, and dedicated to the proposition that all men are created equal, might endure, we liberated a race which we had oppressed, and made the union of free states secure. So now we stand for the greatest measure of autonomy, and for absolute freedom of religion, of civil liberty, of cultural development of the weaker peoples within the stronger nations, and of the native peoples of the undeveloped regions of the earth.

And out of our civil travail thru which was confirmed our union of free states, which with unfortified boundaries and unantagonistic development stretches from ocean to ocean, we stand for the development of a League of Nations which shall bring the free peoples of the earth into a new fellowship, which shall settle their disputes by conciliation and adjudication, which shall put the economic power and the armed force of the whole against the violators of justice and the disturbers of peace, and which shall be open to all nations who subscribe to its principles and by a full democratic scheme of government

## This Used to be the Bridge Club

—and many a jolly afternoon they had, too, with their aces, and hearts, and jacks, and no trumps.

Then the war came!

Brothers, and husbands, and sons, and sweethearts went away to become aces of the air, or jacks of the navy, or trumps of the American army.

The afternoon meetings continued—but the scenes changed to Red Cross workrooms—and serious, busy fingers of hundreds of thousands of patriotic American women have been making bandages and surgical dressings to alleviate the sufferings of their boys, and your boys, who responded so gallantly to the country's needs.

They are giving their time, their energy and their devotion to the cause of humanity, without stint or murmur.

And now comes your time to give your approval to the work your Red Cross has been doing.

Make this a Red Cross Christmas. Answer to the Red Cross Christmas Roll Call—December 16 to 23, and let the Christmas Eve Message to our men across the sea and our allies—and the thousands and thousands of stricken men, women and children of war-befouled areas—be that the American Nation stands solidly behind the Red Cross with universal membership, and that RED CROSS WORK WILL GO ON.

Near the center of interest—comfortably distant from the area of confusion.

### Our Old Price

¶ For a year and a half the *Woman Citizen* has been held at a subscription price below the cost of manufacture.

¶ At no time has it been considered a commercial proposition.

¶ All the way along the return on the money invested has been computed in terms of propaganda.

¶ All the way along the main object has been to furnish a medium of authoritative political information from the suffrage viewpoint at a nominal cost to the subscriber.

¶ It seems to be generally conceded that this object has been attained.

### Meantime

¶ The price of all items of manufacture has soared unbelievably—10%—25%—35%—50%—and still mounting!

¶ The price of the *Woman Citizen* must mount likewise.

¶ Beginning January 1st, 1919, the annual subscription to the magazine will be \$2.00 a year.

¶ For that sum you are to get a better magazine, with a continuing series of special features of vital interest.

N. B.—All paid subscribers who remit \$1.50 for 1919 before December 15th, 1918, will receive the magazine for one year.

Send in your check or money order to the

Subscription Department, Office of the *Woman Citizen*  
171 Madison Avenue, New York, N. Y.

make themselves eligible to such an alliance of free peoples.

So it is that President Wilson was in line with the great currents of American tradition when he characterized this as a war "to make the world safe for democracy."

In our Declaration of Independence, our Constitution, the Monroe Doctrine, and the Emancipation Proclamation, the New World has offered documents which have contributed to the organized freedom of mankind, and in President Wilson's state papers we have the elements of a new charter. At a time when deep-seated forces of reaction would hamper a democratic solution and assert the old schemes of competitive militarism, of economic wars after the war, of division and bitterness and unhealed sores, such as will breed further wars and rob this one of its great culmination, we call on all liberal-minded men to stand behind the principles which the President has enunciated, and we invite them to join in fellowship with us for their realization.

### Pebbles

A man never ascertains whether he married a peach or a lemon until he happens to open a family jar.—*Cassell's Saturday Journal*.

Nell—Why do you like sailors best?

Jill—They go barefooted aboard ship, so you don't have to be always knitting socks for them.—*Sydney Bulletin, Australia*.

"So they are divorced. Which one got the dogs?"

"She did. But he has the privilege of seeing them once a month."—*Town Topics*.

Tommy (at Red Cross concert)—What's that man got his eyes shut for while he's singing?

Friend—Because he can't bear to see us suffer.—*London Opinion*.

### AFTER THE WAR

"Hand that bill to yer boss, an' tell him ex-Corporal Brown, commonly called 'Fightin' Joe,' wants to know why it ain't been paid."—*Judge*.

Magistrate—What is the charge against this prisoner, sergeant?

Policeman—I found him lying down by the Foreign Office, your Worship, sound asleep, and he refused to get a move on.

Magistrate—Fourteen days' hard labor for impersonating a Civil Servant!—*London Opinion*.

"Charley is simply wonderful," exclaimed young Mrs. Torkins. "I never dreamed that any one could run a motor car the way he can!"

"What has happened?"

"We took a ride yesterday and went along beautifully in spite of the fact that he had forgotten some of the machinery."

"Running without machinery?"

"Yes. We had gone at least eleven miles before Charley discovered that his engine was missing."—*Washington Star*.

## AS OUR WOUNDED COME HOME

(Continued from page 363)

ing back. Then he caught sight of the face of the officer's aid as he dived behind the desk presumably after a waste-basket. The interview ended.

Ellis Island, to me, never appeared so cheerful as the afternoon I was taken thru it. Cheer radiates in the corridors and is present in the wards. There is a Red Cross field representative on the Island, whose work is duplicated at every hospital point. He, and his staff, have charge of writing letters, reestablishing connections between boys and their families, turning the flashlight of optimism where needed and meeting emergency requests from military authorities. The day I was there black-eyed Susans smiled in the wards, magazines and books counter-paned the beds. Outside, in the halls and on the quay, little companies of boys and crutches and canes were gathered in sunshiny spots discussing the way of a bandage with a splint, a pack of cards with a game of poker; never war. Abroad, in the trenches, in the hospitals, war furnished the least material for gossip, it is said. But boys back from Chateau Thierry, "on leave" in New York, complained among themselves of being allowed to talk of nothing else. How were they hurt? Did it hurt? When and where did it happen? The warriors declared they wished sometimes they could be back in the theater of war, to be able to forget it for a while!

Despire the cheer that prevails at Ellis Island one wishes, as the winter approaches, for thousands of pairs of woolen gloves to put on the men hobbling up the South Ferry dock, where the wind sweeps mercilessly over them, turning their hands pinky-blue. As they arrive there from Ellis Island, for a look around New York, they are picked up by representatives of the New York War Camp Community Service and the Red Cross, who have motors waiting, to take them to the cheer of wood fires in hospitality houses. The need for motors in this work will increase, by the way.

Following the high nerve tension of life on the battlefield, and in hospital, there is an inevitable let-down for a man's entire system when he faces the problem of renewed association with his world. It is to tide him over this depressing period that the convalescent hospitality house was invented. If well and wisely run, there could scarcely be too many of them scattered thruout the country near big hospital points. But mark, I do say, if well and wisely run! One is amazed at the number of women, who look sane, who do not appear to question a *reformé's* ability to dance till two o'clock in the morning providing he has legs to do it with.

The motive of all convalescent hospitality work is, of course, to make the men feel that they are necessary in the future scheme as social forces in the community, and that there will be work for them to do. For their obsession frequently is that they are useless, whereas, if the ideals for economic opportunity now upheld are fulfilled, they will not be idle and they will be specially valuable because of what they have done. The great thing is to fuse this conviction into them, make them believe that an economic place is waiting for them, give them something to live for!

And for the rest, if this dream is held up to them, a glowing, hopeful thing, made tangible before their faltering fingers, it is up to the public not to fail them; but to make the dream come thru thruout the years that stretch down the track of the future when the shouting shall have ceased and the glamour died.

## The Best Child Ever Born

is a problem. The brighter the child the greater your problem. Upon your wisdom depend his physical, his mental and his moral development. The greatest of these is his moral development—the building of his character—for this gives value to the others. And there is no way that you can better solve this problem than by the proper selection of his reading. Much that children read is positively injurious to their eager, plastic minds. Some books merely entertain in a wasteful way. But, some not only entertain but at the same time have those fine, constructive qualities which inspire high ideals and build strong, clean character.

## The Young Folks Library

(A Beautiful Christmas Gift)

is enthusiastically endorsed by the leading educators of the nation and by the fathers and mothers in over 75,000 homes, especially because of its interesting and distinctive plan of character building. An illustrious gathering of men and women under the leadership of Thomas Bailey Aldrich, Henry Van Dyke and Hamilton Wright Mabie, who never forgot the child's point of view, nor overlooked his interests, have made this plan and library a rich treasure-house of childish delights and a boon to parents. And you will be pleased to learn that you can secure this library at a remarkably low price, on very easy terms.

### Send for Beautifully Illustrated Book—Free

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

#### I. Work for Young Students.

1. Imagine that you have a cousin in Germany who writes you a frank letter concerning the present disorder in that country. Reproduce your cousin's letter.
2. Imagine that a young friend of yours was in danger in the Polish pogroms. Give a realistic account of adventures he might have had.
3. Write the outline for a moving picture scenario based on the Mooney case.
4. Imagine that you were on a ferry boat when the troop ships returned. Give a vivid description of the scene, and then give a stirring expression of your emotions.
5. Write a well formed complex sentence concerning every American representative to the Peace Conference.
6. Write an explanation of the cartoon on page 356.
7. Read "As Our Wounded Come Home." Tell the story of the experiences of a wounded soldier on his return to America.
8. Read "Practising for Victory." Tell in what respects a war school is more interesting than an ordinary school.
9. Explain the significance of the cover design.

#### II. Work for More Advanced Students.

1. Write a character sketch of Kurt Eisner.
2. Show in what way the Crown Prince resembles some defeated school football players.
3. Explain every one of the main topics of the President's message, giving your explanations in complex sentences.
4. In a single emphatic paragraph sum up the evidence that Germany deliberately brought about the Great War.
5. In two contrasting paragraphs sum up the gains and losses of the college revolution, and in a third paragraph draw original conclusions from those gains and losses.
6. Write a brief presenting every part of the plan for a League of Free Nations.
7. Prove to your class that a League of Free Nations should be established.
8. Read "The Future of American Shipping." Sum up the principal points made in the article.
9. Read "Phantasms of War." Deduce from the article a series of arguments against German "Kultur."
10. In a single well formed sentence express the principal thought of every editorial article.
11. Compare "Phantasms of War" with passages in "The Ancient Mariner," or "Macbeth," or "A Tale of Two Cities."
12. Point out highly dramatic moments in "Phantasms of War."
13. Make a list of similes in "Phantasms of War," and explain the appropriateness of every simile.
14. Make a list of metaphors, and explain the appropriateness of every metaphor.
15. Give your reasons for liking, or for disliking, either the subject matter or the form of Amy Lowell's poem.
16. Which editorial article most appeals to you? Give your reasons in full.
17. Select from the advertisements the sentences that you consider most effective. What are the characteristics that make these sentences most effective?
18. Read aloud the poems collected under "Poets of Today," reading every poem in a way that will emphasize its thought.
19. Show how the poems named above illustrate the use of climax.
20. Show how the poems appeal to emotions common to all people.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Programs of Reconstruction—"The President's Message."

1. Is the President justified in believing that no business or interest should take precedence over the necessity of his attending the Peace Conference?
2. Has the Government acted wisely or unwisely in "taking the harness off" of the industries of this country as quickly as it did?
3. Why does the President hand over the whole question of the demobilization of the railroads to Congress without offering any suggestions?
4. Do you agree "that it would be a disservice alike to the country and to the owners of the railroads to return to the old conditions unmodified"?

#### II. League of Nations—"The Duty of the Hour," "League of Free Nations."

1. What did Mr. Roosevelt mean when he said the world would have to choose between Utopia and Hell? Is a League of Nations a Utopia or a practical world government?
2. What, according to this statement, are the chief purposes of a League of Nations? How are these purposes to be accomplished?
3. What have been the results of the system of "competitive" nationalism? What are the hoped-for results of "coöperative" nationalism?
4. "Both President Wilson and Lord Grey have insisted that the creation of a League of Nations must be an integral part of the settlement itself." Why?
5. "The administrative machinery of a workable internationalism already exists in rudimentary form." Explain.
6. Can you find in the history of the United States any proof of the possibility of the development of a successful League of Nations?
7. What connection is there between the present agitation for a League of Nations and (a) the arbitration treaties of the nineteenth and twentieth centuries, (b) the Hague Conferences, (c) the international problems which have grown out of the world war?

#### III. Europe in Revolution—"Soviets and Bolsheviks," "Turmoil in Germany," "Kurt Eisner," "Opening the German Archives."

1. What is the difference between the soviets in Germany and those in Russia? How do you account for the difference?
2. "If a map of the country could be drawn it would resemble the Germany of the seventeenth century," etc. What conclusions do you draw from this as to the probable outcome of the present German revolution?
3. Is the German revolution likely to proceed along the lines of the Russian revolution? Quote extracts from the news items to support your answer.
4. Why is Kurt Eisner called the "Bavarian Trotsky"? Is he likely to rise to the heights that Trotsky has reached?
5. Why has the revolutionary government of Munich published the reports of the former Bavarian minister at Berlin? What will be the probable result in Germany? in the Allied countries?

#### IV. Our Merchant Marine—"The Future of American Shipping."

1. Look up the history of the American merchant marine (a) in the period before the Civil War, (b) from the Civil War to 1917.
2. Give a brief account of the history of the Emergency Fleet Corporation and of its accomplishments.
3. Discuss the problem of (a) concrete, wooden and iron ships, (b) large vessels and small ones, (c) increased efficiency in service, (d) power and the capacity of ships.
4. What is the probable future of the American merchant marine as compared with that of Great Britain, Germany, Japan?

#### V. Individualism or Socialism—"Wherein We Were Prepared."

1. In your judgment could the United States have accomplished what it has in the past generation if the Government had been organized as a socialist state?
2. "Nothing has happened, however, to justify the conclusion that we ought now to go over to a socialistic program." What is the basis for this statement?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## NATIONAL EFFICIENCY

A monthly section devoted to business, personal and national efficiency. Official organ of the National Efficiency Society. Published in the third issue of The Independent each month

## THE COUNTRYSIDE

Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## POETS OF TODAY

The gladness of love and the joy of living sing thru the poems of Margaret Widdemer, one of our younger novelists and poets, whose recent verse has been published by Henry Holt & Co. in *The Old Road to Paradise*. There is a delightful interpretation of youth's reaction in "Tea."

### TEA

They've flowers and cakes and candle-light,  
And chair by crowded chair,  
And I am very sweet and kind,  
Because I do not care . . .  
I think that I am hoping still  
If I am very good  
And talk to these around me  
As a courteous lady should,  
The room will softly split across  
And roll to left and right,  
With all its smiling pasteboard folks  
And colored things and light,  
And let me run into the grass  
And climb a sunset hill,  
And find three hours one year ago.  
When I was living still.

"Peace" is another poem of youth.

### PEACE

All my days are clear again and gentle with forgetting,  
Mornings cool with graciousness of time passed stilly by,  
Evening sweet with all of birds and lilac-rose sunseting,  
And starshine does not hurt my heart nor night-winds make me cry.  
I can tie a ribbon now, nor hope of your eyes' pleasure  
Makes its hue intolerable if you come not to see,  
I can hear old music now, nor stabbing thru its measure  
Come the thoughts I would not have, or tears that need not be.

All my days are placid now, as quiet children slowly  
Pacing down a leaf-locked way that has not dale or hill;  
Peace again and mirth again, and dawn and even holy . . .  
*I wish I had your hands in mine, and heartbreak still!*

*Songs to A. H. R.*, by Cale Young Rice, published by the Century Company, are informal, lyrical poems of the poignant joy of love. "Shelter" has a fine understanding of quiet happiness.

### SHELTER

I have been out where the winds are,  
And tossing tops of trees,  
And clouds that sweep from rim to rim  
Of blue infinities.  
And all was a sound and away there, a surging of unrest:  
So now I am wanting silence, and the heart I love best.  
Yes, and a quiet book, too,  
Of pensive poetry,  
In which to let the lines lapse  
Away, unlessonedly.

For I shall gather, somehow, from the soft fire's glow,  
And from the eyes I love best, all I need to know.

And hours shall slip to embers,  
And on the hearth lie;  
And every wind that blew me,  
And every want, die.  
Then I shall take the hand I love best, and turn to sleep:  
And, if God wills, at dawn awake, again to laugh or weep.

## REMARKABLE REMARKS

CHAUNCEY M. DEPEW—Joy is too unconfined.

DOROTHY DIX—Every woman in love acts crazy.

ELLIS O. JONES—The people are about to show their teeth.

ARNOLD BENNETT—Britons are not modest, they only seem so.

SENATOR WATSON—I think I am somewhat dull of apprehension.

QUEEN MARY—Today more than ever the Empire needs her daughters.

VICE-PRESIDENT MARSHALL—I am not going to be a Bolshevik President.

CHARLES M. SCHWAB—The day of aristocracy in Government and labor has gone by.

W. J. BRYAN—We can lose most titles, but no one can take away from us that of "ex."

PREMIER CLEMENCEAU—The redemption of Alsace-Lorraine has been the dream of my life.

EX-CROWN PRINCE FRIEDRICH WILHELM—To keep kicking a fallen foe is not playing the game.

JOHN D. ROCKEFELLER, JR.—Nor can the teaching be longer tolerated that the state can do no wrong.

CHARLIE CHAPLIN—People as a whole get satisfaction from seeing rich people get the worst of things.

THE EX-KAISER—I didn't think the American people would be so foolish to elect a college professor President.

DR. HARRY EMERSON FOSDICK—Without a League of Nations we shall have censored speech and a censored press.

KURT EISNER—The game that is now being played in and outside of Germany is not less nefarious than that of July, 1914.

J. OGDEN ARMOUR—I consider the present the most auspicious from the standpoint of national prosperity, in my memory.

PREMIER LLOYD GEORGE—If you want a permanent peace you must put an end to the conscript armies of continental Europe.

SECRETARY MCADOO—I would rather have the esteem and confidence of the American people than any office in their gift.

OTTO H. KAHN—The vista which open before us of America's future is one of dazzling greatness, spiritually and materially.

MINISTER MAURICE F. EAGAN—If Liebknecht is given an opportunity he will found a government almost as autocratic as that of the late Kaiser.

CAPTAIN LOUIS W. MILES—There are no finer nor more courageous soldiers in the world than the boys who were drafted from New York's East Side.

LIEUT. EDWARD G. MAXWELL AT THE FRONT—I have seen in twelve months a human soul and brains take root in what was apparently a lump of clay.

MRS. LLOYD GEORGE—If woman acquits herself in peace as she has done during the war then the new era will be the brightest the country has ever seen.

*In France*—in a Paris museum is a letter written more than four thousand years ago. It is a business letter—the most ancient one on earth. When old Rameses wanted to talk shop with his distant banker, on thick papyrus a hurried message was sent. With extra speed the scribes were able to finish the task in *four months*. Progress! Is it anywhere more startlingly illustrated than by the Mimeograph? Five thousand letters *an hour* it produces—letters that surpass old Egypt's products in *quality* as they do in speed. The newest developments of the Mimeograph—speed duplicator of splendidly printed forms, blanks, letters, drawings, etc.—make it a more important factor in the world's progress than ever before. Get new booklet "E" from A. B. Dick Company, Chicago—and New York.

HARPER'S WEEKLY

## NATIONAL VS. INTERNATIONAL PREPAREDNESS

**I**N his great campaign speech at Bristol last week Lloyd George said: "If you want a permanent peace, if you want to prevent the horrors of this war being repeated, you must put an end to conscript armies on the continent of Europe." This statement followed closely the official announcement a few days before by Winston Churchill, who said: "The British representatives at the Peace Conference will demand general and absolute abolition of conscription thruout Europe."

On the other hand there are influential voices in the United States already becoming articulate for "universal service." Says Mr. Roosevelt, for instance: "We should have all our young men trained in arms."

While we hope for a new world order in which, as President Wilson has urged in the fourth of his fourteen points, that "national armaments will be reduced to the lowest points consistent with domestic safety," still this all depends on whether we get a League of Nations or not.

If the nations hereafter decide to preserve their security by national preparedness, then Mr. Roosevelt is correct. If, however, they prefer international preparedness, Lloyd George's views must prevail.

We prefer the system under which the United States has signally prospered for a century to Europe's discredited theory of armed peace, and the American ideal should be the goal of the forthcoming Peace Conference.

## THE INLAND WATERWAYS

**I**N the field of domestic legislation the first business of Congress is to reduce expenses. The Administration already has made a commendable beginning, within the limits of its prerogatives and of powers granted by Congress, but much more that can and ought to be done awaits congressional action. It is imperative that taxation be cut down as rapidly as possible in order that the people may begin by productive industry to reimburse themselves for war sacrifices, and that capital for industrial development may be reaccumulated.

It is necessary, however, that large expenses shall be incurred for a time to prevent serious loss and distress in the period of adjustment. In the main, industry and agriculture will look out for themselves. The initiative and resourcefulness of American business men and farmers may be trusted to attend to that. In the main, the demobilized military and naval forces will find their way back into remunerative employments without assistance from governmental agencies. This, however, will not be true of all cases. There will be many thousands of men not as alert and not as efficient as the majority who will need help and direction. Also, it is desirable that advantage be taken of a transition period to begin the development of resources which can be made to add materially to the nation's wealth. There are millions of acres of land to be reclaimed, as the Secretary of the Interior has said, and there is another big job that ought to be taken in hand under national auspices, as soon as practicable.

This is the development of inland waterways. Whatever policy may be adopted in dealing with the railways, and whatever the development of traffic by airplane, there will be a large economic opportunity for the waterways; and their potential importance in national defense is great.

The railroad did not put the common highways out of business and the airplane will not curtail the functions of land and water routes of transportation. That canal and river traffic had not greatly developed in the period between the Civil War and the War of 1914 was not a consequence of any economic impracticability of the water routes. In many instances the railroads by arbitrary rate-making had deliberately killed off competition by water, and in nearly all instances canals and rivers had not been put into condition to handle traffic in an up-to-date fashion.

If one has any doubt about the readiness of traffic to make use of the inland waters wherever they are feasible he has only to look at the tremendous volume of normal traffic on the Great Lakes. If our larger rivers were adapted to swift steam craft carrying sufficient bulk to repay operating expenses they would be as bustling with commercial life as the Rhine or the Thames, and tens of thousands of miles of canals might be made not less useful.

State and national governments should cooperate in the development, which should be planned in a large way with the best engineering advice and under the authority of such a body as the Bureau of Standards, which is all in all about the most creditable product of American life to date. There would be no use in attempting to make a network of inland waterways unless the job were done properly. Inadequate breadth and depth of channel and inadequate locks would mean limitation of operation to antiquated power craft and to non-paying cargo carrying bottoms. The opportunities for jobbery and graft in the enterprize will be innumerable and that is one reason why it should be carried out under control by the national Government. There was no jobbery at Panama and there need not be any in developing the inland waterways.

## FOR A LEAGUE OF DENOMINATIONS

THE war has had a wonderfully quickening influence on thought and feeling everywhere, and has accelerated various movements which have shown a tendency to drag. For a generation there has been a growing desire in the hearts of many Christian leaders to bring the various Christian bodies into a closer union. This desire is expressing itself in various ways. The recent conference in Philadelphia is one of the encouraging signs of the times. A committee acting under the instructions of the Presbyterian General Assembly in Columbus last May issued an invitation to the various evangelical denominations to send representatives to a conference in Philadelphia to consider the possibilities of church union. Eighteen denominations responded, and one hundred and twenty-nine representatives met. They came from all parts of the East and from as far west as the Mississippi valley. The meetings were enthusiastic and harmonious, and provision was made for a large committee whose business it will be to present a plan of organic union for the consideration of an International Council to be convened not later than 1920.

The problems which face the church are many and complex. The tasks are colossal. The value of coöperation has been newly demonstrated by the war. It is conceded that the only way in which the church can meet its responsibilities is for Christians to get closer together. Already steps have been taken looking toward the union of the various branches of Methodists, Lutherans, Presbyterians, etc., and now the Philadelphia conference dares to call the churches to consider seriously the desirability of bringing all the evangelical Christians of the United States into one body. It is a bold step, one that is appropriate for the great day in which we are living. There are many difficulties to be faced, and formidable obstacles to be overcome, but the stars in their courses are fighting for a wider and more efficient coöperation in all the kingdoms of our modern life, and who would venture to declare what may be the ultimate outcome of the conference in Philadelphia?

## GETTING RICH

THE Marxian philosophy, austere and simple, explains all inequalities of condition among men by the one phrase "exploitation of labor." The single taxers have gone the Marxians one better by reducing all that interests the human race to one short word, "rent." Meanwhile, the business of getting rich is cheerfully continued at various old stands, and at many new ones, in war as in peace, and the poor, as usual, we have with us.

Meanwhile, also, clever people who do not happen to be either Marxians or single taxers, continue to observe that labor and rent are not the only things that can be exploited with profit. Indeed, when one runs over the list of his solvent acquaintances he is likely to be surprised by the number of more or less rich ones that started out in life without an unearned dollar and have never employed a productive laborer or owned a square foot of land.

This does not necessarily mean that they have "produced" wealth. They may indeed have produced useful goods in a small way with their hands, or in a big way by the discoveries or inventions or organizing activities of their brains, but it has not been thru wealth production, as a rule, that they have become rich. The notion that producers of wealth become wealthy and that the possessors of wealth have produced it, is on the whole fictitious. With exceptions, of course, the possessors of wealth have not wasted much time in producing it; they have been assiduous huntsmen, and have captured it.

How? Not always, we insist, by exploiting either labor or rent-bearing situation, and not usually, in civilized society, by theft or fraud. There is an easier and a safer way, and

a majority of all the rich men now living have followed it. It lies thru the exploitation not of the economic virtues (including the productive industry) of one's fellow men, but, instead, thru an exploitation of their economic frailties: in particular, their self-indulgence and their cupidity.

The producer of wealth, be he farmer, craftsman, mill hand, engineer, or inventor, who controls the expenditure and disposition of his income with an approach to economic sense is exceptional. He may save something year by year; but usually he indulges his wife and children and himself in wasteful expenditures of the purely silly kind: buying worthless truck of every description merely because "everybody does." Here is one of the vast hunting grounds of the capturers of wealth. The war for the time being has shut off parts of it. Before the war a quarter to a third of the income of the producers of wealth was captured from them by the vendors of worthless indulgences.

The other vast hunting ground of the capturers of wealth is the big market—stock market, produce market, cotton market, or other—to which cupidity drives the producers of wealth who have saved something out of their incomes, and who hope by "investing" or gambling to multiply their little all a hundred or a thousand fold. Here most of the big captures of wealth are made, but not often by its producers.

These are things for the social reconstructors and readjusters to ponder. In an ideally just society there would be neither exploitation of labor nor monopolization of natural advantage. Let us get rid of these ancient wrongs if we can. But by what device or program, until all men become truly good and equally wise, shall we prevent the exploitation of economic soft-headedness by economic hard-headedness?

## UNPOETIC RADICALISM

AS compared with the revolutionary movements of the past, Socialists of the Marxian and syndicalist schools are amazingly weak on the esthetic side; and this in spite of the fact that among their number are many artists and poets, such as the late William Morris. Perhaps this is why most of the Socialists of Europe deserted the red flag of internationalism for the battle flags of their respective nations. The red flag has not yet acquired the same romantic glow that made resplendent the red cap of the French Revolution and the red shirt of Garibaldi's veterans. *L'Internationale* is a very inferior war song to *La Marseillaise*. The Socialists have not even a generally recognized Totem; such as the dignified Elephant, the unpretentious Donkey, the truculent Bull Moose and the sinister Tiger, so familiar to the cartoonists of other parties.

The same curse of the prosaic haunts the literature of the party. A syndicalist mob marched recently under the banner "No God, No Master!" If we must have anti-clericalism, we prefer the racier style of the English Chartists who some eighty years ago lifted a flag inscribed "More Pigs and Less Parsons!" or, in grimmer vein, the old French terrorist who spoke of drowning the last priest in the blood of the last king. The Populist waxed eloquent on "the downtrodden workingman," "the rights of the people," "the cross of gold" and other vivid bits of rhetoric. The modern Socialist substitutes leaden, lifeless phrases about "the expropriation of the capitalist class" and the "solidarity of the proletariat." He speaks no longer of the "tyrants" but only of the "bourgeoisie." "Solidarity" replaces the more warm-blooded "fraternity." Candidly, dear reader, does it thrill you to be addressed as a class-conscious proletarian? Do you like having your revolution alluded to as "a stage in the development of economic determinism from bourgeois capitalism to a socially-minded collectivism"? When you build a barricade in the streets or start out to sack the government arsenals and mints would you find it more inspiring to shout "Down with the rich! Hurrah for liberty, equality and fraternity!"

or "Three cheers for the Materialist Conception of History and the Labor Theory of Value"?

Marx, of course, was a materialist and something of a pedant. The mark of scholasticism is deep in all his writings; he could never quite throw off the influence of his master Hegel. But, with all its revolutionary emphasis, syndicalism seems to fare as badly as the older Marxism when it comes to the creation of an inspiring symbolism. Sorel is as academic as Marx, and he even cheerfully informed his disciples that the "general strike" which he was recommending to them was only a "useful myth." Larkin, a poet and anarchist by temperament, played with syndicalism for a while, but speedily returned to his old love Sinn Fein. Irish nationalism, with all its faults, is the very poetry of history. Robert Emmet, the Shan Van Vocht, the wearing of the green, the legend of '98, the Emerald Island, the shamrock, the tradition of Saint Patrick, the harp that once thru Tara's Halls, the popular ballads, the peasant's holdings, the fairy tales, the Holy Church—is it wonderful that men fight for these things, or analogous symbols and memories in other countries, more enthusiastically than for theories of surplus value or the drab realism which forms nine-tenths of Socialist literature?

## KOSSUTH'S PROPHECY

EUROPE in 1918 is like Europe in 1848. Now, as then, the spirit of revolution is abroad, nationalistic aspirations are aflame and no king on the continent is safe on his throne. But we trust that history will not further repeat herself, for then absolutism triumphed and Europe again put in chains, from which it was not freed for seventy years. If the revolutions of 1848 had succeeded, the nations of central and eastern Europe would have escaped seventy years of misrule and the world would have escaped the Great War. But then England and America stood aloof and Russia and France took the side of the tyrants.

Among the defeated champions of freedom and nationalism was Louis Kossuth, who fleeing from the Austrian tyranny to the tenderer mercies of the Turk, was liberated by an American frigate, the "Mississippi." Invited by Congress to become the guest of the nation he was received on his arrival with the greatest enthusiasm.

The young men wore "Kossuth hats" and were eager to enlist in the Hungarian cause. He had learned English from a volume of Shakespeare while in an Austrian prison—spending, he said, a fortnight on the first page of "The Tempest"—and he spoke with the eloquence of a biblical prophet. His speech before the members of Congress, the Cabinet and Supreme Court is printed in full in The Independent of January 15, 1852, and from it we quote a passage that foretells what now we see coming to pass before our eyes:

Happy your great country that it was selected by the blessing of the Lord to prove the glorious practicability of a federative union of many sovereign states, all conserving their state rights and their self-government, and yet united in one. Every star beaming with its own luster, but all together one constellation on mankind's canopy. Your fundamental principles have conquered more in seventy-five years than Rome by arms in centuries. Your principles will conquer the world. By the glorious example of your freedom, welfare and security, mankind is about to become conscious of its aim. The lesson you give to humanity will not be lost, and the respect of the State Rights in the Federal Government of America and in its several states, will become an instructive example for universal toleration, forbearance and justice, to the future states and republics of Europe. Upon this basis will be got rid of the mysterious question of language, and nationalities raised by the cunning despots in Europe to murder liberty, and the smaller states will find security in the principles of federative union, while they will conserve their national freedom by the principles of sovereign self-government; and while larger states, abdicating the principle of centralization, will cease to be a field to sanguinary usurpation and a tool to the ambition of wicked men, municipal institutions will insure

the development of local particular elements. This is my confident hope. Then will at once subside the fluctuations of Germany's fate. It will become the heart of Europe, not by melting north Germany into a southern frame, or the south into a northern—not by absorbing historical peculiarities, by centralized omnipotence—not by mixing in one state, but by federating several sovereign states into a union like yours. Upon a similar basis, will take place the national regeneration of the Slavonic states, and not upon the sacrilegious idea of Pan Slavism, equivalent to the omnipotence of the Czar. Upon a similar basis will we see fair Italy, independent and free. Not unity but union will and must become the watchword of national bodies, severed into desecrated limbs by provincial rivalries out of which a flock of despots and common servitude arose.

This reads like President Wilson's fourteen articles; the independence of the Slavic nationalities, the liberation of Italia Irredenta, the regeneration of Germany, local self-government and federal union. Kossuth's fervent appeal carried away his hearers without regard to party. Daniel Webster, Secretary of State, declared in response that "If ever it should be necessary for England and the United States to combine for the defense of constitutional liberty against a world in arms, the whole force of despotism should not make them quail."

The Independent hung out from its window, as the Kossuth procession passed up Broadway, a banner inscribed: "U. S. to the Russian Bear. Mind Your Own Business." For we must remember that it was the Czar who crushed out Magyar independence, for Austria as a military power was futile then as now. Editorially we demanded that the United States should protest "as a member of the brotherhood of nations" against any interference of a foreign power with a weaker nation. That might involve us in a war against Russia as well as Austria, but we argued that "Russia is not the colossal and invincible power that it is commonly supposed to be" from its area and population.

We pointed out that Poland and the other border provinces would break away from Russia at the first chance and that the American with the British fleet could blockade the Baltic. And we then express the opinion that only by the joint intervention of England and America could constitutional government in Europe be saved on the one hand from autocratic rule and on the other "from the bloody tide of socialism"—or, as we should now word it, Bolshevism.

We recall this history now not for the purpose of establishing a claim to prophetic power on the part of Kossuth, still less of ourselves, but to show the dangers involved in the present situation. For the Hungarian state when in the course of time it gained control of its own affairs turned out to be as tyrannical as its former oppressors. The Magyar minority trampled upon the Slavs, Rumanians and Germans within Hungary and curtailed their civil, religious, linguistic and educational rights as ruthlessly as did the Austrians. Instead of aiding in the liberation of Slavs and Italians, as Kossuth anticipated in the passage quoted, Hungary has joined with the Teutonic autocrats to suppress them.

Such inconsistency is common. The same thing occurred in Rumania, which was freed from Turkish oppression under the explicit promise to make no discrimination on the grounds of race or religion. Yet nowhere have the Jews been more harshly treated than in Rumania, as the thousands of refugees to the United States can testify.

The lesson of it is that liberty is not something to be once gained and then forgotten. Toleration must be taught to each generation. It is not sufficient to divide up Europe so far as possible according to nationality and then let each new nation alone in the expectation that it will deal justly with the minorities included within its borders. Eternal vigilance is the price of liberty. There must be continual supervision by an overruling league of nations or the last end of Europe may be worse than the first.

# THE STORY OF THE WEEK

Occupation of the Rhinish Towns Cologne had suffered somewhat from riots after the withdrawal of the German troops and before the arrival of the British on December 6. A band of marine mutineers from Kiel had come a month before and liberated several thousand criminals from the jails. The burgomaster, with the aid of a citizens' guard and with the coöperation of the socialist soviet, succeeded in quelling the mobs after several street fights and much looting.

The people of Cologne dislike the British rule requiring them to keep indoors from eight in the evening to six in the morning, but are obeying without reluctance and even with good humor. A British Hussar stationed on the bridge was approached by a friendly German, who said in good English: "So you have wound up the Watch on the Rhine."

The Belgians in the territory occupied by them have issued the same orders as the Germans imposed upon Belgium, but they are met with less opposition than in Belgium. As the correspondent of the *New York Times* says:

They are ready to meet their conquerors more than half way. Their subserviency at times is embarrassing.

At the small fortified town of Juliers, some dozen miles from Aix-la-Chapelle, which I visited today, the municipality of its own accord hoisted the Belgian flag on the town hall.

This is typical of the attitude everywhere in this part of Germany. At Aix-la-Chapelle this morning, numbers of the inhabitants uncovered at the passage of the Belgian colors. During the whole German occupation of Belgium, no Belgian ever publicly honored the German flag. Again the order of the Belgian commandant of Aix-la-Chapelle to show respect to Belgian officers by uncovering and descending from the pavement is being very widely followed, as I

## THE GREAT WAR

*December 5*—British battleship "Hercules" arrives at Wilhelmshaven. Food and fuel famine in Vienna.

*December 6*—Belgians occupy Dusseldorf. Spartacus riots in Berlin.

*December 7*—Rumanians of Transylvania declare for annexation to Rumania. British occupy Cologne.

*December 8*—Last German troops cross the Rhine. Jewish massacres reported from Poland.

*December 9*—Americans occupy Coblenz. Turkish Government arrests officials responsible for Armenian massacres of 1915.

*December 10*—French occupy Mainz. German Government recognizes republic of Esthonia.

*December 11*—Premier Lloyd George declares that England will never give up navy, but conscript armies on Continental Europe must be abolished. Ebert, head of Socialist Government, welcomes troops returning to Berlin.

have seen myself. So, too, is the order to be within doors at 7 o'clock.

Later Aix-la-Chapelle (German Aachen) was occupied by a joint force of French and Americans. The tomb of Charlemagne was decorated with French flags and General De Goutte, who is in command of the Franco-American troops, delivered an address, reminding them that Charlemagne had made this the capital of the borderland destined to stem the tide of Teutonic invasion.

Americans The last of the German troops crossed the Rhine on December 8 and the cities on the left bank were immediately occupied by small detachments of American or Allied forces which had been sent on in advance by rail at the request of the burgomasters in order to

forestall any disorders during the interregnum. The Second Battalion of the 39th Infantry under Col. James Lockett took possession of Coblenz. Col. James Rhea, of Texas, head of the American Commission, has charge of the receipt of the guns, ammunition and military stores, millions of dollars' worth, which are here delivered up in accordance with the terms of the armistice. German officers remained behind to point out their location. Civilians are also required to surrender all arms.

Otherwise the people are not interfered with and the cafés and theaters are running as usual until late at night. On this account the Americans are more welcome than the British, French and Belgians, who garrison the other towns. The girls wave handkerchiefs as the soldiers march by and the authorities are not merely compliant but cordial. The local soviets, or councils of workmen and soldiers, are reported to be managing affairs efficiently and maintaining good order. In the task of administration the Americans have the advantage in that so many of them can talk German. The men of the 32d Division, largely from Michigan and Wisconsin, are having a particularly easy time of it, for many of the population had relatives in America. Captain Liederpruyn on entering Bitburg found his uncle mayor of the town.

## A Berlin Imbroglia

On Friday, December 7, the most serious disorders since the outbreak of the revolution took place, the result apparently of mutual misunderstandings. The mystery of the affair is not yet cleared up, and the motives remain hidden. First, it appears, somebody, not yet identified, telephoned Lieutenant Fischer to go to the Prussian Diet building and seize the Soviet or Ex-

Western Newspaper Union

## MORE FOOD AND CLOTHING FOR BELGIUM

These boxes and crates piled forty feet high in a New Jersey railroad storehouse are a very small part of the thousands of tons of clothing that we are shipping to the refugees of Belgium. The photograph at the right shows how the clothing given by people all over the United States is sorted and packed to be sent overseas.

THE MODERN SPARTACUS

Dr. Karl Liebknecht, who, under the pen name of "Spartacus" used to attack the Kaiser's Government, is equally the enemy of the moderate Socialists now in power at Berlin

Executive Committee of the Soldiers' and Workmen's Council there in session. Fischer, with twenty of his soldiers, entered the chamber and with revolvers pointed at the twelve committeemen, said: "Hands up! We arrest you in the name of the Government." He then ordered his men to take them to prison, but just then Herr Barth, who is a member of the Government, happened to enter the room and learning of Fischer's action, declared that the Government could not have authorized the arrest without his knowing it. Fischer then left the committee under guard and went to the Chancellor's palace and reported to the Council of People's Commissioners that he had executed their orders and made the arrest. The astonished Commissioners declared they had given no such orders and Fischer was put under arrest. Then a messenger was despatched to the Diet building to release the committee.

About the same time a man calling himself "Captain Kessler," also unknown, appeared at the barracks of the Franzer Regiment and in the name of the People's Commissioners ordered the soldiers to march to the Diet building and arrest the Soviet for stealing two and a half millions in gold. They obeyed, but finding Fischer's men in charge they went to the office of *Die rote Fahne* (The Red Flag), the Spartacus organ, to search for the gold. As soon as the People's Commissioners heard of this they sent word to the soldiers to leave the newspaper office, as the Government had issued no such orders.

Meantime columns of soldiers and sailors from various quarters, obedient to some mysterious call, marched to the Chancellor's building to declare their loyalty to the Government and their distrust of the Executive Committee and to acclaim Ebert as President of the Provisional Government. Ebert appeared and listened to their speeches, but declined to accept the honor without consultation with his colleagues.

In another quarter of the city the Spartacus or Liebknecht Socialists were holding a joint meeting in Sophia Hall

with the Soviet of Deserters when a man entered and declared that Scheidemann and his Junker friends had started a counter-revolution and had arrested the Executive Committee. The audience started down the street and gathering recruits as it went appeared before the Chancellor's palace with several hundred shouting: "Hurrah for Liebknecht!" and "Down with Ebert and Hindenburg!" The guard fusiliers protecting the palace turned out to block the mob. But it continued to advance until the machine guns opened fire on it, killing sixteen and wounding as many more.

These various movements of that Friday afternoon appear to be parts of a scheme that somehow missed fire. The conspiracy has been traced to three men, Count Matuschka, Herr von Rheinbaben of the Press Department of the old Foreign Office, and Martin, a journalist. The watchword was to be "Redheart" and in the homes of the three men were found a number of black brassards on which had been embroidered a red heart.

#### Transylvanian Rumanians

The Rumanians living in Hungary have voted to unite with their brethren in the independent kingdom of Rumania on the other side of the Alps. There has been some doubt as to the attitude of the Transylvanian Rumanians because the government of

the Rumanian kingdom has been reactionary and oppressive. The Jews were unconstitutionally debarred from voting and the landlords ruled the peasantry. On this account there had been agrarian, labor and racial riots before the war. Rumania was persuaded to enter the war on the side of the Allies by assurances of support from the Russians to the north and the Salonica army to the south, but both failed her. The Rumanians began the campaign by an invasion of Transylvania thru the mountains in order to secure the territory that they claimed. But the German and Austrian troops under Mackensen cut them off by occupying the passes thru which they had entered while the Bulgars invaded Rumania from the south. In a few weeks Rumania was overrun, Bucharest was captured and the Rumanian Government forced to flee to Jassy near the Russian boundary. Here it was decided to democratize the kingdom by granting equal suffrage to the men of all races and religions and to reform the land laws.

The collapse of Russia gave Rumania a chance to annex Bessarabia on the east, which contains a large Rumanian population, as now the collapse of Austria-Hungary gives her a chance to annex Transylvania on the west. Here the Rumanians lay claim to twenty-six Hungarian provinces, but these include a considerable German

and Magyar population, The German colonies form an island in an alien population. (The reader may be reminded of the fanciful explanation of their presence given in Browning's "Pied Piper.") The National Assembly of the Rumanians of Transylvania on December 1 was held in one of these German cities, Klausenburg, which hereafter may be known by its Rumanian name of Gyula Fehervar. The Assembly voted unanimously for union with Rumania on the basis of universal manhood suffrage, liberty of language, religion and civil rights, and land and labor reforms.

## The Baltic Provinces

The complete and immediate retirement of the German troops from Russian territory was stipulated in the first draft of the armistice, but on further consideration this was changed to make the evacuation "as soon as the Allies, taking into account the internal situation of these territories, shall decide that the time for this has come."

The reason for the change was obviously because it was seen that the Bolsheviks were advancing westward as rapidly as the Germans retired, and the propertied classes, including the German barons, were anxious to have the Allies occupy the country before the German forces relinquished control. The Estonian workmen are mostly Bolsheviks and the Lettish troops have formed the bodyguard and chief support of Lenine and Trotzky, the Bolshevik rulers of Russia. In the abortive revolution of 1905 the Letts and Esths took an active part and were in the end put down with great severity and executed by wholesale. Now they are getting their revenge on the landlords and nobility.

By the first of September, when the defeat of Germany became apparent, the red flag was raised in the Baltic provinces. At Reval, the chief seaport of Esthonia, four hundred German soldiers and sailors joined in the movement and paraded the streets singing

the Marseillaise in defiance of their officers. At the same time in Petrograd the Bolsheviks formed the First Reval Communist Regiment and the First Esthonian Light Artillery Regiment to take possession of the country.

On the last of November the Bolshevik army crossed the Narva River into Esthonia and the Bolshevik fleet sailed from Petrograd into Narva harbor under a Swedish flag. According to reports of refugees, wholesale carnage followed. The Soviet Republic established in Esthonia was recognized by the Russian Soviet Government and by the new German Socialist Government.

Meantime the old Provisional Government of Esthonia, which had been anti-German and anti-Bolshevik, had been sending urgent appeals to the Allies to come to their rescue. The White Guards, who under a German officer, Count Keller, had tried to defend Esthonia from the Bolsheviks, were badly beaten and half annihilated in the battle.

On the 1st of December the British fleet reached the Baltic ports and landed a force at Reval for the protection of life and property.

## The Czechs in Danger

The situation in Siberia is becoming daily more alarming as winter sets in. The collapse of the old government in Germany has increased the power of the Bolsheviks and they are gaining ground toward the west, north and east if not the south. On the west they are reoccupying the Baltic provinces as the Germans evacuate. In the north the Allied and American troops have had to withstand fierce attacks by the new Bolshevik army. The eastward advance of the Soviet forces has practically expelled the Czechoslovaks from European Russia and with them immense throngs of fugitives from Bolshevik tyranny and famine. The population of Omsk, normally 200,000, has been swelled to 800,000, mostly destitute. The Omsk Government has been obliged to prohibit the entrance of any more people. The hospitals are almost out of drugs and bandages. The American Red Cross has got one shipment thru to Omsk, but that is altogether inadequate. Of two thousand Bolshevik prisoners and refugees transported across Siberia nearly half perished from disease, starvation and exposure during the six weeks required by their train to go from the Urals to the Pacific. The American Government has appropriated \$5,000,000 for Russian relief and 20,000 tons of supplies are on the way.

The Czechoslovak troops are still holding the Siberian frontier at the Urals, but they have become alienated from the Omsk Government by the coup d'etat of Admiral Kolchak. They are mostly republicans and socialists and they do not want to fight for the restoration of the Czar, which they suspect to be the aim of this movement. President Masaryk, of the new Czechoslovak republic at Prague, is very anxious to get his troops out of Siberia and back to Bohemia, where

Stimson in Dayton Daily News

THE WATCH ON THE RUINE 1918

they are now needed to protect their country against the Magyars, but he feels under obligation to the Allies to keep them in Siberia until they are relieved by Allied forces or a Russian army can be organized.

The Bolshevik forces opposing the Czechs are said now to number 227,000, but this may be doubled in the spring and later raised to three or four million if the plans of the Soviet Government are carried out. The new armies are being organized and trained by German and Magyar officers from among the prisoners taken by the Russians when they were in the war. The Czechs in Russia number about 80,000.

To keep up the spirits of the people the papers of Omsk assure them that an army of 600,000 American troops is coming soon to their rescue. Altho there is no authority for this the papers there are not allowed to publish anything to the contrary.

The new dictator, Admiral Kolchak, has failed to receive the support that he expected when he seized the supreme power. The All-Russian Government of Ufa is opposed to him. The Archangel Government of Tchaikovsky is non-committal. The British has not yet recognized him. General Semenov, commander of the Manchurian Cossacks, whom the Allies and America have been supporting with men and money, is openly defiant. Admiral Kolchak has accordingly ordered his removal and appointed General Valkov to succeed him. But it is doubtful if Semenov will tamely accept the dismissal, and, since he controls the railroad from Chita east, he might cut off Omsk from its sole source of reinforcements and supplies.

**War Indemnities** Premier Lloyd George states that the Allies will demand that Germany pay the whole cost of the war. This, he estimates, will amount to \$120,000,000,000 for the Allies. The total wealth of Germany before the war was, he says, between \$60,000,000,000 and \$100,000,000,000. The cost of the war to Germany was from \$30,000,000,000 to \$35,000,000,000. So, we may infer, if all the wealth of Germany were confiscated it would not pay more than half the indemnity to be demanded.

The Premier states that all claims of the Allies must be paid before the German internal war debt. But the indemnity must be exacted in such a way as not to do more harm to the country that receives it than the country that is paying it. This the experts appointed by the British Cabinet believe can be done. The German people have already to pay in taxes on their own war debt, according to the American Federal Reserve Board, three times as much per capita as the people of the United States, altho their wealth is less than half as great.

The cost of the war to Great Britain was, according to Lloyd George, \$40,000,000,000, which is more than its cost to Germany. The Belgian Industrial Committee calculates the damage to Belgium thru the German mili-

Darling in New York Tribune

HOW ABOUT THOSE RISING PRICES "ON ACCOUNT OF THE WAR"?

STILL THE BLAMED THING DOESN'T FALL

tary occupation and seizure of machinery and raw materials at \$1,200,112,000. To this will be added the military expenditure and other claims, raising, according to unofficial estimates, the total Belgian bill to \$7,600,000,000. The Paris Matin puts the French claims as follows:

Return of 1871 indemnity of \$1,000,000,000 with interest .....	\$12,000,000,000
Expenses of present war...	28,000,000,000
Pensions .....	8,000,000,000
Damages .....	20,000,000,000
	<b>\$68,000,000,000</b>

Lloyd George's estimate of the claims against Germany did not apparently include the cost to Russia, said to be \$21,000,000,000, or to the United States, about \$18,000,000,000. It is not yet known whether the United States will present a bill for indemnities, but at any rate, according to the armistice, the expenses of the army of occupation are to be paid by Germany.

**Wartime Leaders Resign** The men who left big business to take Washington positions as war executives are for the most part going back to their peace time po-

Harding in Brooklyn Eagle

THEY HAVEN'T SURRENDERED YET

sitions now that the actual war emergency is past. Charles M. Schwab, director-general of the Emergency Fleet Corporation, to whom is chiefly credited the excellence of our shipbuilding output, has resigned his government position in order to resume work as head of the Bethlehem Steel Corporation. Charles Piez, vice-president and general manager of the Emergency Fleet Corporation, is to succeed Mr. Schwab.

John D. Ryan, director of Air Service and Second Assistant Secretary of War, has returned to his position as president of the Anaconda Copper Company.

Bernard M. Baruch has resigned as chairman of the War Industries Board, but has been asked by President Wilson to be ready to come to Europe for special service with the peace delegation.

The railroads have lost not only Director General McAdoo, but also Robert S. Lovett, director of the railroad administrator's division of capital expenditures. Judge Lovett will take his former position of executive chairman of the Union Pacific Railroad.

SOMEBODY'S GOT TO RUN THE RAILROADS

A LITTLE JOB FOR CONGRESS

Ott in Chicago Tribune

WHICH?

SANTA CLAUS FOLLOWS THE FLAG

A hundred thousand mail sacks filled with Christmas packages for the American army in France are being loaded aboard steamers now. This corner of one of the sorting stations for the overseas Christmas mail suggests the size of the job that the soldiers' Santa Claus has on his hands this year. The tags hanging along the line mark the various destinations: Aviation Corps, C. A. C., Q. M., Labor Division, Pioneer Infantry, etc.

#### Taxes and Loans

The national tax bill now under debate in the Senate calls for a revenue of \$5,878,486,000 next year and contains provision for a maximum levy of \$4,000,000,000 in 1920. It is the 1920 clause that is bringing the chief opposition to it. Republican senators brought in a minority report on the ground that Congress should not undertake to say so far in advance what the requirements of 1920 will be, and point out that the very fact of recent rapidly changing conditions which enabled the Committee on Finance to reduce the bill by \$2,000,000,000 is evidence of the inadvisability of legislating for taxes so far ahead. On the other hand Senator Simons, who introduced the bill, contends that the two-year forecast is necessary to enable producers to fix their prices and to prevent excess profits based on a continuance of war rates.

The general plan of the bill is to raise about \$4,600,000,000 by income taxes similar to last year, and by war and excess profits taxes, and to raise \$1,400,000,000 from other sources of revenue.

There have been two notable changes in the bill since it reached the Senate. The zone system of postage on second-class mail matter has been eliminated, beginning next July, and pre-war postage rates on first-class mail will be in force again. The other amendment places a 10 per cent tax upon the net profits of industry employing children of fourteen to sixteen years of age, except under an eight-hour law.

There will be another Liberty Loan issue next spring, probably our last great popular war loan. It is expected that the amount will be \$5,000,000,000 and that the bonds will be of short maturity, less than ten years.

Former Secretary of the Treasury McAdoo asked Congress for legislation to permit the Government's continuation of loans to the Allies for one year after

the end of the war in order to finance their purchase of food and reconstruction materials in this country. Since the United States has absorbed much of the world's supply of gold in the last few years, the officials of Allied nations have not the resources, either in cash or ready credit, to pay for the purchases of food, iron and steel, machinery, cotton and other materials that they need to get from the United States during the next few years, to aid in their physical reconstruction programs.

#### A Bigger Navy

America's naval strength in 1920 will be at least twice as great as it was in 1917 if the plans now under consideration by the House Naval Committee are approved. They call for another three-year building program similar to that adopted in 1915, to cost \$600,000,000 and to add 156 ships to our navy, making its total of vessels in 1920 about 1300, including 40 battleships and 329 destroyers.

In recommending the plan to Congress, Secretary Daniels said:

Navies will still be needed as an international police force to compel compliance with the decree of an international tribunal which will be set up to decide differences between nations. Naval vessels will have large peace tasks of survey and discovery and protection in addition to police duty of an international as well as of a national character.

Inasmuch as the United States is the richest of the great nations and has suffered less in war than any of the Allied powers, it will devolve upon this country to make a contribution to the navy to preserve the peace of the world commensurate with its wealth, its commerce, its growing and expanding merchant marine and its leadership in the councils of free peoples.

The Secretary of the Navy's annual report gave high praise to our navy's part in winning the war by carrying and conveying troops overseas, patrolling the coast and danger zones, mine-sweeping and laying mine barriers in the North Sea. In recognition of his achievements as commander of the American fleet in European waters,

Vice-Admiral Sims is to be named full admiral. He is the first officer to hold this title since Admiral Dewey.

Since it is probable that we shall maintain a fleet in European waters and in the Pacific for some time to come, the regular navy is asking authorization for an increased personnel. Its strength at present is from 130,000 to 140,000 men, enormously augmented, of course, by reserves who are still in service. The merchant marine is asking for 220,000 officers and men to operate its growing fleet, which by December, 1919, will comprize about 1900 vessels.

#### Business After the War

American industry is vigorously going ahead with the working out of its own reconstruction program and the extension of our foreign trade. At Atlantic City recently the Reconstruction Congress of the U. S. Chamber of Commerce held a conference of some 4000 leaders of American business, representing 420 industries and an employed capital of approximately \$20,000,000,000. The outstanding conclusions of their conference were three: The need of an immediate quickening of peace time industries to take up the slack of war demobilization, the acceptance of cooperation between capital and labor so as to bring about the greatest opportunity for each, and the desire for the widest possible freedom of trade during the transition period.

The conference recommended that the Chamber of Commerce inaugurate a general system of joint committees of employers and employees to adjust industrial disputes. The platform suggested for these committees included regularity of employment, the right of workers to organization and collective bargaining, the establishment of impartial arbitration agencies, a minimum living wage for all workers, a standardized wage for a standardized performance, the appointment of a responsible executive to superintend relations between the workers and the management.

Secretary of Commerce Redfield in his annual report urged the expansion of the Bureau of Foreign and Domestic Commerce to enable it to give effective aid to American manufacturers and merchants in taking full advantage of after-the-war world trade opportunities. He especially urged the appointment of additional commercial attachés and trade commissioners in Europe, South America, Africa and Australia.

The chief industrial and commercial forces in both hemispheres will be ready to launch great organizations on the commercial seas in quest of trade. The instinct of commercial self-preservation demands organized action. This is not the time for short-sighted thrift.

#### Jobs for Returning Soldiers

Altho the demobilization of our troops is proceeding slowly, the pressure of men looking for work is already beginning to be felt and is being met by extensive plans of increased manufacture and

construction. The United States Shipping Board has arranged with the War Department to give the men of the selective army now in camp waiting demobilization official information of jobs in shipyards and in the crews of merchant vessels. There will be 200,000 jobs of this sort available to released soldiers within the next few months.

Every employe of the railroads who left to join the army or navy has been given a definite promise of his former position. This means, it is estimated, that more than 400,000 soldiers can step into their old work in railroad offices, shops or trains as soon as they are discharged.

The War Labor Policies Board has recommended the immediate inauguration of public works on a large scale by the Federal Government, and an appropriation bill will be laid before Congress shortly for starting river and harbor work, national highways and reclamation projects. If the necessary funds are appropriated there will be abundant opportunity for labor then. Secretary of the Interior Lane has already surveyed, planned and estimated irrigation projects on which 100,000 men could be put to work.

The labor information bureaus established by the Federal Employment Service in every community and carried out with the aid of the Council of National Defense, the War Camp Community Service, the "Y" and most of the other soldiers' welfare organizations will have on record available jobs thruout the country and will help both men and women to find the work they want to do. The Federal Employment Service placed over two million civilian workers, chiefly in war jobs, in 1918.

**Plots and Rumors of Plots** The chief of the Bureau of Investigation of the Department of Justice, A. Bruce Bielaski, has been giving before the Senate committee sensational testimony on the activities of German propagandists in this country. The information that the Secret Service has collected shows that a cable from former German Ambassador von Bernstorff to Dr. Albert offered the *Washington Post* for sale to German authorities for \$2,000,000; that Samuel Untermyer, a prominent New York lawyer, acted for German interests in an attempt to buy the *New York Sun*; that William Bayard Hale, while employed by Hearst at a salary of \$300 a week, was receiving \$15,000 a year from the German Government to promote its propaganda in this country, that Ambassador von Bernstorff urged special favors for Mr. Hale in Germany, "as Hearst has placed himself outspokenly on our side"; that Edward L. Fox, an American newspaperman, submitted to Captain von Papen, military attaché of the German embassy here, plans for stirring up a war scare between Japan and the United States in 1915 in order to stop our shipments of munitions to the Allies; that the German Consul General in Chicago presented to his chief, Dr. Albert, a plan for blocking our shipment

of airplanes to the Allies by purchasing the Wright factory and patents; that systematic propaganda was spread thru the United States to rouse Irish and Jewish sentiment against the Allies.

A list of "important" persons in this country, made out by Dr. A. Karl Fuehr, former consular official in Tokio, was produced by Mr. Bielaski to show supposedly pro-German sentiment. The list included William Randolph Hearst, owner of many magazines and nine newspapers; Oswald Garrison Villard, of the *New York Evening Post*; Edward Rumely, of the *New York Evening Mail*; Professors Shephard, Sloane and Eugene Smith, of Columbia; Muensterberg, Hart and Francke, of Harvard; Sanborn, of Vanderbilt; McDonald, of Indiana; Schevill, of Chicago; McClellan and Richardson, of Princeton; Faust, of Cornell; Jastrow, of Wisconsin; Jordan, of Stanford; Hon. Peter Grosscup, Hon. Richard Bartholdt, George S. Viereck. Many of the men mentioned have made specific denials of pro-German affiliations and pointed to their own writings as proof. Edward A. Rumely is now under indictment for concealing the ownership of the *Mail* from the Alien Property Custodian.

A large part of the evidence Mr. Bielaski introduced consisted of letters and telegrams from William Randolph Hearst directing the editorial policy of his newspapers. Urging an embargo on American shipments to the Allies, Mr. Hearst wired on February 25, 1917: "Let us end these shipments of food and ammunition and money to the warring nations of Europe. Let us feed our own people, build up our own country, conserve our own resources." On February 24, 1917, he cabled to William Bayard Hale in Berlin: "I cannot see why the century-old friendship of the United States and Germany cannot be maintained and perpetuated."

**Next Year's Seven Billion Dollar Budget** Advance estimates of the Government expenditures during the fiscal year beginning next July call for an outlay of \$7,443,415,838, of which about \$5,000,000,000 will go to the War and Navy departments, \$893,000,000 to pay interest on the war debt, and \$579,000,000 for continuing the building of a merchant marine. These expenses are less than one-third of our appropriations for the current year and about seven times our ordinary annual expenditures.

The War Department asks \$2,556,000,000 for bringing the army home from Europe, maintaining part of the force, continuing fortifications, and for other purposes; and the Navy Department estimates its need at \$2,656,000,000, including a renewal of the naval emergency fund approved by Congress last year to provide for the construction of additional destroyers, submarine chasers and other special craft.

The Shipping Board asks for \$500,000,000 for building ships already authorized by Congress, \$60,000,000 for operation of vessels, \$17,451,000 for recruiting and training officers and crews, and \$1,453,000 for incidental administration expenses.

General March has stated that after the signing of the armistice more than \$16,000,000,000 was lopped off the original \$19,000,000,000 war budget of the army.

The most striking equipment appropriation of the army budget is for the air service. Under aircraft production a lump sum estimate of approximately \$145,000,000 is submitted, supplemented by an additional \$20,000,000 for the air service itself.

An unusual item in the estimates is \$20,000,000 asked for conducting the decennial census thruout the United States.

Left

#### A MONUMENT TO GENERAL PERSHING

New York has named one of its busiest traffic centers, at which construction is now under way for an overhead vehicle drive and elaborate improvements, Pershing Square, in honor of the victorious commander of the A. E. F. The square is on Forty-second Street just south of the Grand Central Terminal. The girder which this photograph shows being drawn into place is one of the largest foundation pieces of the overhead drive. It weighs eighty tons and required fifty-two horses to pull it into position.

# A LAND WITHOUT A COUNTRY

In the following story Miss Putnam shows Luxemburg to be illustrative of the smaller European nations in its struggle against aggression from neighboring powers. Like Belgium, a victim of the German invasion, Luxemburg is determined to maintain its independence. Miss Putnam's latest book is *Luxemburg and Her Neighbors*. She is also the author of *Alsace and Lorraine*.

BY RUTH PUTNAM

**W**HEN General Pershing entered Luxemburg and stood, very tall, on a small balcony looking out on the city, beside Marie Adelaide, the girlish Grand Duchess of the little country which, unarmed for decades, nestled quietly and conservatively among the great armed powers of Europe, history for Luxemburg was being made—and in spirit quite different from that which animated the negotiators who were traveling down to Vienna in these same autumn months two hundred and four years ago.

Luxemburg, in many ways, is a kind of touchstone on which European history has left its mark. It has been, in fact, a football in European diplomacy. It is a little principality of only 999 square miles, with a population of less than three hundred thousand, who live under a constitutional parliamentary government that is headed by a young woman, who guides the diminutive ship of state with the aid of a minister who is practically controlled by popular vote. It is a simple nation, with a simple court decorated by a graceful young lady—a political unit, very small, with a proletariat heretofore in thoroly comfortable circumstances, apprehending no military service. It enjoys great variety in the productivity of its soil. It is rich in mineral wealth. Its stock breeds and horses are known all over Europe. And, curiously, as if to supply the Grand Duchess and all the nations round, there is a rose crop of great abundance in one section of the land!

This little Grand Duchy, with its Lady and its roses, needed no soldiery to protect it. It was unarmed—quite unlike Belgium. Six great powers instead—Austria, Prussia, England, Italy, France and Russia—had united in declaring it neutral and sacred from aggression on any side.

But, like a fly caught in a trap, the little land found itself caught in the Prussian net at the very outset of the war. It knew, it feared, and it dreaded Prussia. Indeed, it hated Prussia. Sings its song:

Come ye from Belgian, Prussia, France,  
Our Homeland view with friendly glance,  
Learn how here, on every side,  
No discontentment does abide  
Tell the people, near and far,  
"We will remain just what we are."

Contentment you may plainly see  
And Prussian we will never be!

The Prussians lived up to Luxemburg apprehensions. On the second day of August they poured troop trains into the Grand Duchy capital at the briefest intervals consistent with their safety. They established their General Staff in the City of Luxemburg in the shadow of the old fortress, the "inland Gibraltar," it once was called, a fortress whose guns had been withdrawn long since, in the name of neutrality. After a time the General Staff passed on, but the iron hand of the invader was not lifted. In a few weeks Luxemburgers began to feel the shortage of food. They could get nothing from Belgium thru accustomed commercial channels. The Belgian Relief Commission, when applied to, was unable to help because England refused to permit supplies to enter Luxemburg to be used up by Germany. Not until November was there relief, when Switzerland came to the rescue. Day by day, during the four years of the Great War, pressure of German occupation grew heavier—so that there were at the end of the Great War more than thirty officers and two thousand native Luxemburgers in the Belgian and French armies. The free press had to give way. Telegraph, mail lines and the railroads were out of Luxemburg's hands. Arbitrary imprisonment replaced the usual procedures, and Delegates of the Lower Chamber of the Luxemburg Parliament were no longer immune from arrest. In short, from the day that the girl Duchess protested against the invasion of her land, the Huns treated Luxemburg as conquered territory and, even tho eventually the Germans paid Luxemburg something like a million and a half francs for the damage they have done, Luxemburg remembers Prussia—as a land of Prussians!

All this is simply illustrative of the manner in which, for centuries, the land that is Luxemburg has been a plaything among the powers. The

Grand Duchy might be called an experiment in international arbitration. In 1815 the slogan of the powers was "legitimacy" and "balance of power," and the powers did strange things to satisfy their ideals. Once, indeed, the little realm had a more independent existence as a simple countship, whose counts lived among the people and looked to their affairs. Then it chanced that Luxemburg entered European politics, and four of its rulers became emperors in the Holy Roman Empire. They made Luxemburg a duchy. The last sovereign to have no interest outside of Luxemburg affairs was one Elizabeth of Goelitz, who sold her rights—they were the rights of mortgagee only—to Philip of Burgundy, in the fourteenth century.

Coming down thru the years, then: For a century Luxemburg's fortunes were identical with those of the whole Netherlands; then Burgundians were merged with Hapsburgs, and Charles the Fifth handed over the Netherlands, together with Spain and his share of America, to Philip the Second. In 1572 the Netherlands revolted and seven of the twelve northern provinces were made into the Dutch Republic, and the southern, of which Luxemburg was one, remained under Spanish dominion. Then, in the next general treaty readjustment, the little duchy was passed over, with the remainder of the Belgic Netherlands, to the Austrian Hapsburgs. Then came the great revolution in France, and the Belgic Netherlands became ten departments of France, and Luxemburg became the Department of Forests—"the Forest Canton," as it was called. Part of the Belgians submitted willingly to this apportionment of themselves, but not the Luxemburgers. They found the domination of the republican Directory very trying; they loved their Sundays and church festivals; they resented being forced to celebrate the *decades*, or Tenth Day of Fêtes, in commemoration of the republican deeds that they counted as sacrilegious and accordingly they looked with anticipation of security to the strong arm of Napoleon. When Napoleon fell, territorial readjustments were necessary, the Rhine Convention fell apart, and the paternal benevolence of the Congress of Vienna reapportioned the Luxemburg rights and boundaries.

The diplomats did not treat the Forest Canton as they did the other departments withdrawn from French protection. A dominant idea in the congress was that Prussia needed expansion. Consequently it was agreed that Prussia should take some of the adjacent Rhine lands that had been part of the Forest Canton and that the

With no natural boundaries to assist it, and closely wedged in by three disputing neighbors, the Grand Duchy of Luxemburg has had a history of struggle to maintain its political unity, and has naturally become a "football in European diplomacy." Topographically it might be, and historically it has been, in turn a part of each of its surrounding neighbors, and its people have retained some of the most dominant characteristics of all the three countries

Netherland Nassaus should receive Luxemburg in place of their own German family territory. That is, it was agreed that eastern parts of the Forest Canton should be trimmed off, neatly, to Prussia's advantage, and that the King of the Netherlands should have a seat in the new German Diet which was to represent the German Confederation. Undoubtedly there was a distinct Prussian idea that the United Netherlands should come into the German Confederation and the presence of the Netherland King, as sovereign of Luxemburg, would be a good entering wedge for this desirable consummation. So, in 1815, Luxemburg was a Grand Duchy, her Grand Duke being the king of what is now Holland and Belgium. Luxemburg alone, of this kingdom, was linked with the German Confederation, yet was treated, administratively, no differently from the other Belgic provinces. It was represented proportionately, and was invariably rated as belonging to the Belgic group. When, thus, the revolution of 1830 broke out, the Luxemburgers sympathized with their Belgian brothers in a common effort to expel the Dutch, their volunteers rushed to Brussels, while those who stayed at home disarmed the Dutch emissaries at Ettelbruck. In the same

year the powers decided to separate Luxemburg from the newly constituted kingdom of Belgium, and to make it an entity under the control of Holland. Both Belgians and Luxemburgers protested with the utmost energy. The powers did not heed. William I of Holland, for reasons of his own, refused to sign the treaty. Luxemburg continued to be administered by Belgium, a happy union which lasted for eight years, which the inhabitants of both countries expected to last forever. But, of a sudden, in 1839, the King of Holland decided to accept the settlement which had been proposed eight years before. The Belgians and the Luxemburgers, both, were thrown into consternation, and the scenes that followed were among the most pathetic in the history of the Belgian House of Representatives. The only exception to the spirit was shown by the Luxemburgers in their capital city, where, as a result, from 1815 on, in accordance with the resolutions of the Congress of Vienna, a Prussian garrison held the city in subjection to the King Grand Duke. From recognition of Belgic independence to 1839 the Grand Duchy remained in alliance with the new Belgic state, altho the powers had ordained its division into two portions, one to go to Holland, taking the name and status of Grand Duchy, the other to Belgium. This was the beginning of the last phase of Luxemburg history. As a diminutive Grand Duchy

it took up this phase in 1839, according to the terms of the Treaty of London. Three years later the King Grand Duke forced it into the German Customs Union, a procedure greatly disliked by the people.

In spite of the fact that advantageous trade connections with Prussia followed the union, no warmer feeling of association with Prussia ever ensued. Yet, tho the culture in Luxemburg is French, the language of the portion

Press Illustrating

*Grand Duchess Marie Adelaide, the young ruler of Luxemburg, who voiced the protest of her people against the German invasion*

that remained Grand Ducal was Teutonic—which composite suggests, by the way, a striking character of Belgium itself. At last, in 1866, the long expected crash came in Germany, and Germany's dream of excluding Austria from the Confederation was realized. Prussia swallowed "churches and steeples, and all the good peoples"—not only Schleswig Holstein, but Hesse Cassel, Nassau, Hanover, Brunswick—and then paused to see what would happen next. Luxemburg slipped out of the broken Confederation and refused to join the North German Confederation, with the result, to make a long story short, that just when it seemed that Louis Napoleon was about to buy the Grand Duchy outright from the Netherland King, who cared little about his property, Bismarck inspired an obedient press in violent protest against allowing "an ancient German land to pass to French control." There was great flurry in Europe. There might have been war. But Prussia had not sufficiently recovered from her difficulty with Austria, and accordingly, when the powers met in London and talked over the question, Bismarck agreed that the Prussian garrison which had represented the old Confederation had no right to existence in the fortress of Luxemburg. The land was left unarmed, as the interested nations promised to hold it sacred. Bismarck, himself, remarked on January 25, 1871, at Versailles, just on the eve

of the surrender of Paris, that Prussia had not been strong enough to fight about Luxemburg in 1866. "Right," he said, "was not on Prussia's side any more than strength. I wanted to give it to Belgium, but I found no support." So the troops were disbanded, the teeth of the fortress were drawn, and Luxemburg was declared neutral.

During the war of 1870 the immunity pledged to Luxemburg was preserved. But out of that war the Grand Duchy emerged with another link laid on it by Prussia, for, under the pretext that the French Railroad Company, which had control of the Luxemburg connections, had broken faith, Germany succeeded in getting control of the system, which it solemnly promised on June 11, 1872, never to use for any military purpose in case of war—with what result we now know.

Only once before the Prussian invasion does William II, the ex-Kaiser, come into the story so swiftly traced here. That was in 1888, when shortly after he took the throne, he was still disposed to accept advice from Bismarck, he went to Duke Adolph, who had lost his claim on Nassau lands by siding with Austria against Prussia, and was, as a result, in exile. The Kaiser visited him during his summer sojourn on the Island of Mainau in Lake

Constance and assured him that he, the Kaiser, would have no objection to him, the Duke, becoming Grand Duke of Luxemburg if he was now properly disposed toward Prussia; Adolph was well disposed toward Hohenzollern interests thereafter. As a result, when, in 1890, King Wilhelm III died in Holland, Luxemburg entered upon a new phase of "independence." Instead of having a regent, she now had a sovereign of her own. Adolph left his new realm to his son William in 1905, but William died in 1912. He had no sons. The Luxemburg Parliament accordingly consented to recognize Marie Adelaide, his eldest daughter, as the heir. At the age of only eighteen, she was inaugurated as the Grand Duchess Regnant. Yet, it must be remembered, the Luxemburgers themselves have chosen neither her nor her kith or kin.

The striking lesson in this brief and rather casual résumé is, indeed, that at no time in the history of the little realm have the Luxemburgers themselves ever been consulted. It is no wonder that theirs is a conservative state, quite afraid of any effort at self-determination. It is no wonder that they must look upon the arrival of Pershing and the Americans with slow but grateful realization that a new order in Europe is at hand, and that, if it wish, Luxemburg may yet be a part of Belgium, with no less but rather a greater hatred of all that is Prussian.

# A TALK WITH ADMIRAL SIMS

BY HAMILTON HOLT

**V**ICE ADMIRAL SIMS, Commander of the American Fleet in European waters, is a tall, spare man with a kindly eye and a firm but humorous twitch about the mouth. His close cropped beard and seamed face make him look very much like our Civil War hero, General William Tecumseh Sherman. The admiral has his office at the American Naval Headquarters in Grosvenor Gardens, a few doors from the American Embassy. When I presented my letter of introduction from Secretary Daniels he received me sitting before his well ordered desk in a little back room with an English coal fire cheerily burning in the grate. In an instant I perceived that he would talk with the most agreeable, not to say astonishing, frankness. He is one of those men who apparently does not hesitate to say what he thinks, for what he thinks is evidently the acme of sense. He told me that the United States had at that moment thirty-seven destroyers operating at our base at Queenstown, twenty-eight at our base at Brest, and twenty at Gibraltar. These, of course, were in addition to the battleships attached to the North Fleet. I learned afterward that he is the one who deserves chief credit for the complete amalgamation of the American and the British navies. So closely indeed have the fleets of the two great English speaking nations worked together that the United States fleet in European waters has often drawn requisitions on the British commissary department in the same manner as upon our own supply. When, for instance, the admiral found that our men needed warmer clothing for service in the cold weather (for before our men came over to England they had been maneuvering in a warm climate) the British supplies were placed at our disposal and we had no trouble to obtain whatever we needed. This was all due to the mutual rationing system established by Admiral Sims and the British Admiralty. The admiral said there had been instances of collision in the dark between British and American destroyers and England and America thereupon held joint court-martials to determine where the culpability lay. Sometimes the senior presiding officer was a Britisher and sometimes an American. So highly do the British esteem our admiral that on one or two occasions he had flown the commander's pennant of the entire Allied fleet.

Everywhere I went in navy circles I found that Admiral Sims was regarded

with the greatest respect and admiration. Tho I had the great pleasure of meeting him several times and was once his guest at dinner, the interview in which he gave me most of the facts which I here relate took place on April 1, the day after I arrived in London. About the first thing the admiral said as I entered his room was, "Last April the German submarines were sinking 900,000 tons per month. We have reduced the submarine destruction now to 400,000 tons a month. We are solving the submarine problem." As it is generally understood that the admiral himself suggested the

when it is injured it has to come to the surface and can then be destroyed. If it goes to the bottom there are special instruments for detecting it there. A submarine cannot go below 200 feet without running the risk of being crushed by the pressure. It cannot remain still unless resting on the bottom and the movement of the propeller to keep it poised under water is sufficient to be heard by the detecting devices. The Germans, according to Admiral Sims, then had about 200 destroyers, but they never had more than ten or fifteen out at a time, since it took such a long time for the Germans to overhaul and repair their submarines after they came in from a voyage.

The admiral said that the average American destroyer has a greater radius than the British destroyer, but ours cannot go so fast. Our old destroyers can go about thirty miles an hour, but the newer ones make a speed of thirty-five. "Nations build boats," said the admiral, "according to their several needs. We build our ships to go across the ocean and to the West Indies. Consequently we must put distance ahead of speed. England builds for speed, since her chief peril is in the North Sea. Her boats go forty miles an hour. But we shall have 260 new destroyers of the finest

type this year and that spells the end of Germany's submarine menace. The new Ford destroyers, however, will be good only for the present war. They can go eighteen knots an hour, which is fast enough to catch a submarine, but they will not prove much good for maneuvering with a big fleet after the war is over."

"The great problem of bringing the convoys in," said the admiral, "arises when they separate to go to English and French ports. We have not now enough destroyers to split the fleets up and then protect every boat. When the boats return to the United States they have to run along the southern English and Irish coasts to the rendezvous and there the German submarines lie." The admiral assured me that the Allies knew every German boat that was out. They always go around England to get into the English Channel. The direct route is too dangerous for them, tho sometimes, under the protection of German destroyers when the British destroyers have retired along the Dover coast on account of foul weather, they attempt to go straight thru the Channel. But we have been able to get about one in every [Continued on page 310]

convoy system one can see that he spoke on this subject with authority. Admiral Sims then assured me that the best offensive weapon against a submarine was the depth bomb. When a destroyer detects a submarine it makes a dash for it and drops a depth bomb carrying 500 pounds of explosives, which goes off eighty feet below the surface and has a destructive radius of 150 yards. In addition to the depth bomb our destroyers and submarines were just being equipt with certain listening devices with which they could detect the German submarines under water. "Only last week," said the admiral, "a destroyer followed a submarine for six hours by this listening device, as a hound follows a fox, and then got it." Two months later I met on the way to Rome another American naval officer who assured me that an American submarine had since then followed a German submarine eighteen hours and caught it. These listening devices are American inventions and were all sent over by our board of inventions for experimental purposes. All Allied boats are now equipt with them. A submarine can only go a little while submerged. It can always be overtaken by a destroyer and

## THE SURRENDER OF GERMANY'S FLEET

One of the most spectacular episodes of the whole war was Germany's surrender, according to the armistice terms, of a large part of her fleet: ten battleships, six battle cruisers, eight light cruisers, fifty destroyers and all her submarines. The Allies' ships formed a lane and the surrendering ships passed thru and were taken command of by Allied officers

# CONFESSIONS OF A MOTION PICTURE PRESS AGENT

*This is the last of a series of three articles dealing with the inner side of the motion picture industry. The previous articles appeared in The Independent of August 24 and December 7*

IN annis domini 1915 and 1916 the favorite outdoor sport was picture making. Gentlemen of swollen wealth—or of no wealth at all, but blest with credit and assurance—hastened to southern California or other semi-tropic paradise and helped Art cut up capers. The general obsession was that “anybody could make a picture.” Why, certainly he can, just as anybody can write a dull book, or design a tame sketch, or compose a pointless play. The job is always experimental, for even the practised artificer in one kind may quite fail in another. I purpose in this article to tell of three attempts at pictorial greatness that may serve to illustrate the virtues and the limitations of the screen.

My friend the Author stood in the foremost ranks of America’s “best sellers.” One of his novels had been picturized with enormous success. The director of the production was a veritable wizard of the films. There came a rift between the two men which widened into a personal breach. “Go to!” said the Author. “The plot, characters, incidents, settings, all were mine. Of my next story, I shall be the director general!”

True to his word, the Author organized a stock company, bought land, built a studio, hired players, cameramen and technicians, and completed his picture operations during the California winter season. Then he came to New York and engaged a Broadway theater, entrusting me with the work of publicity—a congenial task, as I admired his talent and liked him personally. With a great fanfare of advertising and on the whole a favorable verdict from the press, we embarked on a Broadway run to tremendous opening receipts. Within a month the business dropt to practically nothing, and in six weeks we were obliged to close.

The causes of the failure were (1) an old story, (2) a poorly selected cast, (3) bad direction. Some time later the Wizard Director who used to be the Author’s partner came to bat with a rival and authorless production. He lasted three months and a half, then had to close. This work was characterized by no story, great acting and superb direction. The point is that each man needed the other, tho neither would admit it. When they broke apart, the

## III. RETROSPECT AND PROSPECT

creative impulse ceased to function. My next connection was a “low-brow” job in which my dealings were with a cunning but uneducated and almost illiterate type of showmanship. It consisted first in exploiting a well known vaudeville star in allegorical film spectacle and afterward in writing up an underworld drama. The first task would have appealed to a Phidias, and the second to a policeman. The lady was the frankest and the most innocent that I had ever met. Like most vaudevillians she was sedately and happily married, her husband being a sort of fidus Achates who fetched and carried with the utmost zeal. “Director slighted us horribly in the field photography,” he explained. “He paid Mimette no attention whatever—actually allowed her no personal stills in the nude! We fixed that,” he added naively, “by hiring our own ‘still’ artist, taking train down to the end of the Jersey coast, and posing her in ‘the altogether’ among the ocean sands and the pine woods.”

It occurred to me that such a Grecian nymph had best be represented in the advertising “copy” by reproductions of Aphrodite rising from the sea or disporting Eros and Psyche. When, however, I showed the Phidias and Praxiteles reproductions to the head of the company, he yelled: “Trash! Trash! Don’t you know any better than to bring me junk like that?” ’Twas evident the proprietor’s classical education had been neglected. Per contra, his ideals of female loveliness were founded on the Irish-American and Teutonic “Egyptian dancers” at Coney Island. Consequently all our advertising campaign centered around the heroine as an Egyptian princess to whom the *danse du ventre* was no mystery.

About this time the proprietor and the director of the show fell out over the question whether the director’s name should appear in three-foot characters on the billboard posters. The proprietor decided it should not, whereupon the two parted company, and it was understood that the director was to be barred from admission to the theater on the opening night of his own handiwork. The boss’ factotum even personally took the tickets at the door. The director, being an actor, knew how to fool ’em; he enjoyed the performance from an aisle seat in the third orchestra row, having smuggled himself inside in the guise of a physician with the aid of property whiskers borrowed from a wigmaker. He also caused the newspaper to print conspicuously the fact that he had made the picture.

The long, rambling spectacle illustrated the appalling ignorance that causes so many movie attempts to miss solid excellence. It was in fact compiled from a dozen persons’ hazy recollections of British pantomime, the contradictory mythologies of many nations being scrambled into it and almost every sort of scene or stunt being used. The effect of it was a “stag” burlesque show; but the boss, with his curious, topsy-turvy ideas, featured it as a “fairylid idyl for women and children.” I personally arranged short tours for the star to the more important cities where she appeared before large feminine audiences and told ’em how to be “healthy, happy and wise.” My efforts likewise succeeded in getting her face, figure and life-story into the magazines, and for a while she was the most talked of woman in America.

The burlesque spectacle lasted half a season, after which we did the underworld drama. The latter had a sociological squint, so we were busy rounding up authors, feature writers and social reform experts. The picture itself was a really creditable piece of work. It “got” the police and their quarries and the specialists who are trying to reform conditions, but nevertheless failed to arouse the public outside this class interest. One extraordinary idea of the boss was to attract attention by means of scathing indictments of distinguished public men for their alleged slighting of the wrongs exposed in the play. This was worked up in a series of “open letter” advertisements in which each statesman was publicly addrest. The cunning scheme would have proved sure-fire but for one untimely element: the country was on the

When the U-boats failed, attention was centered on Germany's pent-up warships, and the question was, "What is to be done with them?"

## GERMANY'S NAVAL DISGRACE

**A**FTER the battle of Jutland (August, 1916) the German fleet remained in its bases and in the Baltic Sea. Except two light cruisers which attacked a weak convoy in Scandinavian waters, no German warship larger than a destroyer has ventured 150 miles west of Heligoland. All of Germany's colonies, all of her great mercantile fleet were taken from her with practically no more resistance than if her navy did not exist. The unyielding grip of the overwhelmingly superior British fleet stationed—not as in old times immediately off the enemy's harbors but in its own ports three hundred miles distant—caused the fatal paralysis.

Up to the end the Germans maintained a false propaganda concerning this naval inertia. It was said that the sallying forth of the ships was merely delayed in order that they might be refitted with monster guns of such power and range that even the most formidable of the vessels of the Allies could not approach them; that plans of great novelty and ingenuity had been laid whereby the enemy would infallibly be decoyed into mine fields or nests of submarines; that new types of enormous projectiles were ready whereby poison gas in great quantities could be driven into the confined spaces of the vessels, with instant destruction of their crews. And as for submarines, they grew, on paper, to the size of large cruisers. All of which left no doubt in many minds that before long Germany meant to attempt a great naval offensive.

But time went by and it did not materialize. The few instances when submarines appeared off our coasts did not support the assertion that whole fleets of them were going to make navigation impossible on this side of the ocean. The threatened "corsair cruisers" which were to slip thru the beleaguering lines and ravage our shores never slipped. The great mine draggers to be towed by powerful warships to open safe channels thru the mine fields thru which the German navy could pass to cooperate with the army in the expected capture of the French channel ports, never dragged. On the contrary, to the British fleet were added the French dread-

BY PARK BENJAMIN

naughts and our own; and after that the propaganda weakened and a gloom settled over the German Admiralty, for the internal difficulties of the Kaiser's ships were beginning to leak out. The traditional loss of morale which always happens when fighting ships and sailors are confined in port for long periods of time was unmistakably apparent. Again and again the crews mutinied and killed their officers. The active operations on the Russian Baltic coast, which it was doubtless believed would give the men something better to think about, had no such effect, for conditions grew worse instead of better. But whether the capital vessels could go out or not, no question existed as to the ability of the submarines to escape unseen. Herein lay the naval salvation, and the demand to build more and more of them became well nigh frantic. The idle battleships which had cost scores of millions were stripped of metal fittings to provide material for U-boat construction. The more the submarines increased in number the more of them were sunk by the Allies. And the more the sinkings the more imperious became the desire of German sailors not to be drowned like trapped rats. Therefore they mutinied worse than ever, and were probably not at all sorry when Zeebrugge and Ostend, the nearest German submarine bases to England, were finally closed up. But this capture was a serious blow to the German naval offense, especially when added to the ever increasing efficiency of the Allied convoys and ubiquitous destroyers. In fact the submarine menace had so far failed as to become practically negligible. So the world's attention was once more centered upon the pent up warships in the German harbors, and again the question "What is going to be done with them?" came to the fore.

Meantime Germany had got hold of what was left of the Russian navy in the Baltic and the Black Sea. There were originally some good ships in it, especially four fine 28-knot battle cruisers—almost completed when the war began—which if still in existence would be a most welcome addition to

the German array. Then we were told that the emergence of the fleet merely awaited the military consolidation therein of the Russian ships in the Baltic.

Now, despite all the vast and varied tergiversations of the German press, very few people really believed that the German ships would not come out, and these mainly were of the opinion that in face of the overwhelming odds, should emergency arise, the vessels would all be blown up at their anchorages. If this war has demonstrated anything it is the great value of audacity in offense, and therefore the majority of critics argued that no small advantage would be gained by a sudden foray by the whole German fleet at a selected time when the circumstances of weather, etc., were most favorable. And in the great resulting mêlée a few fast ships might escape to range the oceans and before they were ultimately caught do enormous damage to commerce and undefended harbors. This is what Admiral Cervera expected to accomplish had he been fortunate enough to get one of his cruisers thru Commodore Schley's line at Santiago.

As to the time for the sallying forth of the German ships there was much debate. That they could not be compelled to come out or destroyed in their bases was regarded as settled. That the event would be timed in some way with the German land operations was also considered clear. When the great offensive of March 21, 1918, was finally checked, the period seemed to have arrived; and even when the fleet still remained motionless the belief prevailed that the naval operations would certainly begin as soon as Germany recognized her impending defeat. This, if for no other reason than it would enable the Potsdam gang to point to resistance up to exhaustion not only on the land but on the sea, before yielding to superior Allied forces.

Then came the armistice and with it, of course, the stern demand for the surrender of the best ships of the German navy and the internment of the others. Ten great dreadnaughts, five fast battle cruisers and an array of the most formidable of the smaller craft were on the [Continued on page 41]

# KEEPING THE NATION FIT

BY WALTER CAMP

**A**FTER a year devoted to continuous conference, discussion and argument, those who have made a life study of the health problems of the American nation are unanimous in the belief and the conclusion that national legislation is necessary to improve materially the physical condition of our citizens.

A wide variety of schemes for relief and improvement has been outlined more or less in detail and plans have been put forward varying from informal and voluntary medical inspection in the public schools, with incidental advice, and without definite and systematic supervision, to as rigorous and protracted and continuous military training as that which is required by the Continental nations who are now in the most destructive world war of all history.

In the debate which for a year has marked efforts of students of health to improve conditions, two facts have stood out clearly:

1. Two selective drafts, those of 1917 and of 1918, have revealed appalling conditions of unfitness, many draft boards being compelled to reject as high a percentage as one man in every five and some as many as one in three.

2. After a world war has raged more than four years and after America has been a principal in it more than a year and a half, no definite remedial action has been taken by this country.

Agreement, however, that legislative action is the only solution has been reached and no dissent is expected from the decision to make physical fitness action a feature of the Congressional program of the coming session.

Thruout the nation readiness to accept such a carefully outlined policy, once it is given legislative sanction, is evident, and has found expression in no uncertain terms. The writer met with a willing response to his plan for forming Senior Service Corps among men of mature years for the purpose of carrying out a continuous daily program to ensure general physical fitness.

From the Cabinet of President Wilson to the executive staffs of the large department stores, munition establishments, and organizations of professional men, the plan has been taken up and adopted. Among the department offices in Washington, on the roofs of New York, Philadelphia and other large city skyscrapers, and in school and municipal gymnasiums, there has been an eager seeking for physical betterment thru the formation of classes to take setting-up exercises and to frame a suitable policy which shall include sane recreation, diet and hygiene.

Thru the public schools physical fitness exercises have been introduced more generally since the opening of the present school year this fall than ever before in America, while the instruction of rational diet and hygiene methods has been made general in all grades.

A beginning has been made toward

Walter Camp, director of athletics

national physical improvement, but it is only a start, and constructive national legislation seems as necessary as it is inevitable to remedy any such condition as the two recent drafts have revealed.

Is it too radical to insist that the approaching legislation make it imperative that the following program be adopted nationally?

1. Compulsory physical examination, at least as early as the beginning of school age, possibly even earlier, aimed at the correction of physical defects.

2. Light physical exercises in every public school from the primary to the high school grade.

3. Compulsory recreational activity, amounting to light general exercise, during the morning and afternoon recess hours in the public schools, carefully supervised.

4. Compulsory physical drill in cantonments or camps during a part of the summer months, beginning with light but standardized general physical exercises and sports, designed to promote suppleness, coordination, and the general physical condition, followed with increasingly progressive sports and drill, and continuing not more than a fortnight for the boy of fourteen, but increasing in length and intensity annually and culminating in a program of rigorous recreational and general physical activity lasting well thru the summer months for the youth between eighteen and twenty-one.

One of the chief aids and most imperative needs in such a national campaign has been, it seems to me, a universal standardized setting-up, or physical fitness, drill.

This has been brought home forcibly to me on my visits to the various naval stations as Director of the Athletic Division of the Navy Commission on Training Camp Activities, as well as to other schools of training elsewhere. When the stations began filling with young men, upon America's entry into the world war, there was no real standardization of the physical exercises prescribed, and some that were being given by the class leaders in physical instruction were actually deleterious.

The first thing that I noticed was that each station, and in fact each leader, had a different view or a different method. I then began a study of these exercises and soon found a reason for this. The Swedish, so-called, exercises were the standard, but Swedish exercises were like the German language, capable of very extended variety. Some leaders were very strenuous and used the most strenuous types of the Swedish exercises, even to the extent of men lying flat on the ground and clapping the hands without dropping the body to the ground, getting the hands back in position to support the body once more. I noticed very speedily that where the more strenuous forms were used the men were pretty well "tuckered out" at the end of half an hour of this work, and certainly not in condition to perform any drills or do any strenuous athletic work with vim and snap. I also saw that when men were transferred from one station to another that on account of the lack of standardization it took them some days to master the work under a new leader who had different views. All this began to be interesting, but doubly so when I saw how many men were slacking the exercises. This I did not note at first, as the rhythm of a group is apt to deceive the casual observer. Then, however, I wondered how a man of 190 or 200 pounds could go thru certain of these exercises led by a non-commissioned officer of 138 pounds. I at once made a very startling discovery that none of these heavier men went thru the actual operation, but made motions corresponding in a way and hence slacked the work almost altogether.

Then I began the study of other men who undoubtedly could have done the work had they wished to do so and finally by putting the camera on these groups of men I found that even with the best of leaders the slacking was very marked. At this same time two commandants of districts, one an admiral, wrote me in commenting upon the development of the athletic work that they were going to throw out setting-up exercises altogether because "their men either slacked or else were not fit for work for some little time thereafter." Now when the commandants of districts who are endeavoring to fit these men for sea duty had reached this conclusion it seemed to me that it was high time for some one to make a study of these setting-up exercises and find out whether they were as worthless as these commandants believed or whether they could be put in a form that would be of use. It seemed worth while considering whether there was not some means of making use of a preparatory exercise directed toward the main object in hand, which was the making fit of these men for sea duty. The second consideration was standardization, for that seemed at once to be essential if we were going to have setting-up exercises. In other words, it was folly to transfer a thousand men from one station to another and have them learn a new manual. It was actually foolish to gather together men on board a ship, 100 from one station and 100 from another, and then have to begin all over again. Still more, it was absolutely essential that these setting-up exercises, being merely a preparation, should not be so strenuous or so overdone as to defeat the very object, and instead of making men ready for their daily duties, incapacitate them for an hour or so from thoro performance of those duties. Finally there is one point on which the athletic coach and the officer in the service agree most heartily, that is that it is bad business to teach men to slack. When a man gets an order he must perform the job and must not see how easily he can get by. These considera-

© Harris &amp; Ewing

*Secretaries Lane and McAdoo after drill*

tions led me to a study of the whole problem, and, as was natural, I began to take notice not only of the men in the performance of these setting-up exercises but of the latest books by scientific experts on this phase of our life; the fact that in the draft nearly a third of the men had been rejected seemed to have stimulated scientific investigation along these lines. In reading I then found, confessedly somewhat to my astonishment, that some of these points had struck not only physicians and surgeons but also those who have been engaged for many years as direct leaders and exponents of this so-called Swedish system.

The discovery of Bolin, after twenty-five years of experience in Swedish gymnastics, "that setting-up exercises were absolutely useless and unnecessary for the legs, arms or pectoral muscles," has been followed by other discoveries

which are being borne home to those who taught these or other cumbersome or violent programs. Several of these indicate that the real value of setting-up exercises comes thru the circulatory system, the breathing and the general carriage. They should not be accompanied or characterized by great effort. These efforts always fix the chest and this stops the pulmonary circulation. It is not necessary to have a long list of exercises for the purpose of set-up, and in fact they may be reduced to movements that may be performed in five to ten minutes. They should be largely stretching exercises, breathing exercises and those which strengthen the muscles of the neck, shoulders and back, for the purposes of attaining proper poise and carriage. The breathing exercises in this list are not carried to any extreme effort. The lungs are slowly filled and the breath is not held, but expiration follows and then there is a pause at the end just as is natural before the inspiration again begins.

With all these facts before us it seemed that we ought to be able to answer the commandant who was ready to throw out setting-up exercises altogether, to benefit by the experience of men like Bolin who had devoted a lifetime to this Swedish exercise and to give some plausible reasons, not only to the physical expert but to the man who had "to take the medicine," namely, the enlisted man, which should make him more willing to spend a short time in something that would really make him physically better for his work. The cardinal points could then be classified:

1. Setting-up exercises to be preparatory ought to increase vigor and vitality rather than to exhaust.

2. To occupy just as short a period of time as possible and yet accomplish the results of improved poise, respiration and endurance.

3. To be so standardized as to make it possible to interchange men without the necessity of learning a new manual.

4. To eliminate, as far as possible, the tendency to slack by making it more apparent, and by making it less tempting because of over-strenuousness.

# HOW TO MASTER EFFICIENCY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**S**UCCESS is a habit of doing everything right from the start. When we analyze a great man, we generally find his greatness a matter more of method than of man. Your secret of power is ten per cent what you do—ninety per cent how you do it.

The majority of men have acquired the fatal habit of studying a thing wrong, learning it wrong, doing it wrong. This ugly fact is nobody's fault in particular, but only a part of the scheme of evolution, which ordains that every man must work like hell to make his own heaven. You can be fairly sure that a method old enough to be inherited is old enough to be worn out. The science of Personal Efficiency may be put in seven words: Find the right method and follow it. The right method *has* to be found—it does not happen.

You must know the principle of a method before you can make intelligent application for it. A right method of study precedes a right method of work. Therefore you should first study how to study.

A wrong start is responsible for most of the failures in life. Thousands of college graduates in the big cities of the United States are holding poor jobs at starvation wages, or depending upon charity for support. Hundreds of thousands of workmen stay at the bottom of the ladder, drudging out lives of poverty and misery, while perhaps one man in a thousand climbs to the very top. To climb to the top, you have to make a ladder out of new methods. It is mostly a question of right or wrong start—or right or wrong study for the start.

The problems of hiring, training and managing employees were lately being discussed by a group of successful business men. A prominent manufacturer was one of the group. He said, "I would rather employ in my business the average boy of fifteen than the average man of twenty-five. The boy is worth more. He has less to unlearn. I can teach the boy in six months to do right whatever he has to do—then I can usually trust him to do it that way. But when a man has learned wrong methods of work, it takes years to break him of his bad habits, and even then he will go back to them unconsciously—I have no time to bother with such a man."

The speaker was asked to explain his position further in detail. He went on: "It is easier to learn to do a difficult job from the start in the right way than to learn to do an easy job in a different way from that to which you are accustomed. We have proved this repeatedly in the cases of young fellows who hated work, who had never done a real day's work in all their lives. We have given such men the motives, the methods and the means to tackle a hard job with the certainty of doing it well—and we have seen them plunge into their work like the center rush at a football game! But we have tried almost in vain to teach men who are industrious and conscientious but have *learned their job wrong*, the knack of doing work in a new way.

"Psychologists tell us that the greatest force in the world is habit. When you train your mind, muscles, nerves and emotions to follow regularly a certain course of action for a long time, you discover that the habit has become a second nature, almost impossible to change. Teaching a middle-

Mr. Purinton has made a reputation for himself as teacher, author and efficiency expert. His chief books are: "Efficient Living," "The Triumph of the Man Who Acts," "Efficiency and Life" and "Petain the Prepared"

aged man to do a job in a manner wholly new is about like teaching a bird to swim or a duck to fly. There is nothing so important to the man who expects to succeed as the habit of learning to do whatever he does in the *best way possible*. Such a habit is worth five thousand dollars to any man—whatever his work may be."

The opinion of the manufacturer is borne out by the experience of industrial engineers. The name of the illustrious Frederic Taylor, founder of scientific management, is hated even to this day by thousands of employees of big shops and factories. Why? Simply because Taylor evolved new methods for doing their work, and they could not or would not change from the old ones, even after being shown that the new ones were better for their health, finances, opportunities of promotion. Habit is more powerful than judgment—you may be convinced by the logic demonstration that a different method will produce better results, but you will be almost sure to cling to the old method unless absolutely forced to adopt the new.

The fatality of learning a thing wrong may be seen wherever men work or play or strive to a given end.

The violinist who learns wrong methods of bowing and fingering can hardly ever become a master performer till he learns his art over again.

The stenographer who learns an inferior method of shorthand is confused and hindered all her life in her work, no matter how good a method she studies later.

The physician who learns exclusively the false method of drug medication without regard to the physiological or psychological methods of Nature seldom reaches the top of his profession—tho he may be mentally convinced of the folly of the drug system after he has learned it.

The teacher who learns merely books

as preparation for his work never gets into the hearts of young people as he would have done if he had gone forth and studied life before trying to teach life. In all the trades and professions men are most handicapped by a wrong start.

You must not be so handicapped in your study of Personal Efficiency. You owe it to yourself to become a Master of Efficiency—not merely a student of the subject. And you cannot become a master of anything without knowing the how and why of it, from the ground up.

The first move toward mastery of a subject is to provide suitable *equipment* and *environment*. If you settle these two points in advance, you may render your study thereby as much as thirty per cent more effective and productive.

You need a supply drawer, box or shelf, containing materials and supplies to promote effective study. You probably recall that one of the first things you did as a boy, at the beginning of each school year, was to go to a stationery store and equip yourself with writing materials and other implements needed for the work of a student. For home study you require similar utensils.

Furthermore, you will render your study more powerful by observing the law of concentration which demands that a lesson once begun should be finished without interruption—the student must not break a delicate thread of thought by jumping up and running off to get a forgotten pencil,

or paper clip, or other tools of study. If you live near a good stationery store, you can buy your whole study outfit for a dollar or two, unless you wish to spend more. We name the list of items, with approximate minimum price of each, as follows:

- 2 or 3 medium-soft lead pencils..... 5 cents
- 1 colored pencil, green or blue.....10 cents
- 1 large scratch pad.....5 to 10 cents
- 1 dozen sheets foolscap writing paper... 5 cents
- 1 small box paper clips.....5 to 10 cents
- 1 small packet assorted rubber bands...10 cents
- 1 small tube library paste or bottle of mucilage .....5 to 10 cents
- 1 ink and pencil eraser..... 5 cents
- 1 ruler, 12 to 15 inches..... 5 cents
- 1 ball fine but strong twine.....10 cents
- 2 or 3 large manila or fiber envelopes, 10 to 15 cents
- 1 calendar memorandum pad.....15 cents
- 1 small pocket memorandum book...5 to 50 cents
- Pen and ink and blotter.....20 cents

If you are not accustomed to buying materials for literary work, a few explanations may be helpful. The ink and pencil eraser comes in one piece, ink eraser on one end, pencil on the other. Library paste is better than mucilage, and the tube form is superior to the bottle, as the tube keeps longer. Most stationery stores can furnish rubber bands in small packets of assorted sizes; but if your store does not handle the packet, you can select a few bands each from a half dozen sizes and purchase the assortment by weight. A good calendar memorandum pad is a pasteboard wall card 5 by 8 inches, having on the front fifty-two detachable sheets, every sheet holding memorandum space for the seven days of the current week, and the date of course being marked on the sheet.

The best pocket memorandum book is the loose-leaf kind. This looks better, lasts longer, is quicker, cleaner and more effective than the ordinary cheap notebook. The leaves when used are detachable, and filed away or destroyed, with a clean memorandum book always in your pocket. Several

makes are good; the one I use cost 29 cents, with 5 cents each for additional fillers containing forty extra sheets; size of book 2½ by 5 inches.

What do your pencils cost you? Good ones for everyday work may be had now for about one cent each. If you think you have to pay five or ten cents each for a satisfactory pencil, you are wasting money; you should learn who makes the satisfactory penny variety, then see that your local dealer supplies you with this brand.

See how many of these items of equipment you can obtain from the largest stationery store in your vicinity. Check items on list above, as you procure them. Don't spend more than a few hours in shopping—other more important things are to be done. But before you do the next thing, have all your supplies and materials placed together in your efficiency drawer, box or other permanent holder.

The next point after equipment is environment. Do you know that a man's surroundings may cause a variation of as much as forty per cent in the quality and quantity of his work? This has been shown by recent experiments in large factories, offices and stores.

You will probably find the best place for study an upstairs room away from the street, where you will be safe from noises and interruptions both outside and inside the house. A logical and a natural place for study is the library of your home; but quiet and seclusion are more important than a bookish atmosphere, and a library is no place for study when it is downstairs in the front of the house, open to intrusion at all hours of the day. If your library can be shut off and kept quiet from the rest of the house, arrange to do your studying there.

Your most effective base of operation is a flat top desk, with large and small drawers, and a lock and key. If you are without a flat top desk, you could probably secure one at little cost from a furniture dealer or the proprietor of a second hand store. Even less expensive, and almost as good, would be a plain kitchen table, well made with a smooth writing surface. You should get one for about three dollars from a carpenter shop or house furnishing store, and you can varnish the table yourself. I use an old-fashioned solid oak table, and prefer it to a flat top desk for study purposes. A study table should be 28 to 30 inches high, with a top measuring about 2 by 3 feet. The table should be heavy and solid, so as not to shake under pressure. Most of the small desks and tables manufactured for home use are unsteady on their legs, being crippled because some of their legs are shorter than others. Don't work on a wobbly table.

A hard chair is not a help to hard study. You must be physically at rest when you are mentally at high speed. If sitting on a board when you study makes you conscious of the board, have it cushioned. We sug-

gest that when your study table or desk is chosen and placed, you try in connection with it every chair in the house, and permanently borrow the most comfortable. It should not, however, be a rocking chair, as rocking chairs are the Devil's choice instruments for scattering nervous force and making people irritable.

The next task to consider is that of perfect light, both natural and artificial. Put your study table or desk near a window, so that the light comes directly from the back or over the left shoulder. (But try to avoid sitting in a draft, which would result if your study table were between two windows or between a window and a door.) Take the curtains from your study window or push them clear to one side; have the blind always raised clear to the top of the window; make sure that every possible square inch of light is available when you study.

As you will probably do most of your work by artificial light, this matter is even more important. You should have a drop or desk lamp, with a shade that protects your eyes from the blinding glare, while focusing the rays on your work. Never study by the light of an overhead ceiling lamp or of an unshaded lamp. In the opinion of oculists, bad lighting methods not only waste about thirty per cent of your nervous energy while you work in a poor light, but may also induce headache, fatigue, insomnia, dyspepsia, various nervous disorders. Whether your mode of illumination is gas, electricity or oil, you should be able to secure a well-shaded drop or desk lamp from your local dealer, or from a large manufacturing concern whose address he can give you. The only light you should allow in your study room is that of

45 degrees. This will deflect and distribute the current of air.

Keep in mind while you are working the following rules of right study.

Have a regular time, as well as a regular place, for study. When you fix the weekly study periods, jot them on your calendar for a couple of months ahead. The most favorable time is probably from 7:30 to 9:30 in the evening. (Certain exceptions will be noted in Lessons Two and Three.) Do not study every evening. Monday, Wednesday and Friday evenings are most desirable; but if you go to prayer-meeting Wednesday evening, or to lodge Friday evening, you can study Monday, Tuesday and Thursday evenings. Do not study when very tired, or less than thirty minutes after finishing a meal, or on Saturday evening, or Sunday. Try, however, to plan for a two-hour period three times a week. And make this period absolutely regular.

Focus on one course of study exclusively. Do not confuse your mind with extraneous fads and experiments. *Concentrate.*

Lay the most stress on *action*, without which both instruction and reflection are of small avail. Rules, principles and methods are mere empty words until you make a personal application of them—see how they work—feel the results in your life.

Be patient and persistent. You are setting out to achieve tremendously big things; to arrive at the top of your business or profession; to double or treble your income and your influence; to organize your life so that you are in command of your physical, mental and spiritual forces; to live ten or twenty years longer than the average man, doing better work and enjoying life more every year; to make new opportunities and find new possibilities in

a hundred new directions; to plan out, then work out, a finer destiny than your closest friends would now believe you capable of reaching. All this takes time. Don't look for miracles. Don't bank on immediate sensational results. *Persevere.* You are building for life. You can afford to be calm, to smile at impatience. The over-towering figures in America today were, almost without exception, trained for leadership in the school of hardship. Any man looking for easy and quick results should remember that the easiest and quickest thing on earth is failure.

Begin your study with the strongest resolve you know

how to make. If it is old-fashioned to speak and cherish a vow, then be old-fashioned. Connect your study with your mightiest motive as a mainspring. Ask yourself *why* you want to become a leader, *what* great things you will do when you are a leader, *how* you will grasp whatever you most desire. Aim clearly at the finest goal you can imagine. Go at your study with the spirit of a soldier and the strength of a conqueror. It isn't your knowledge that really puts you ahead, but your nerve back of your knowledge.

"The first move toward mastery of a subject is to provide suitable equipment and environment." This study contains most of the points that Mr. Purinton stresses as essential to successful work: a flat-top sturdy desk, a comfortable chair, light over the left shoulder, ample window space, a shaded lamp, good ventilation, a congenial atmosphere

a single drop or desk lamp, shaded perfectly.

Another point is ventilation. There is a direct connection between the breathing apparatus and the brain. You cannot think rapidly or clearly in a stuffy room. Several patent ventilating appliances are on the market, but really all you have to do is to keep a window in your study room regularly open a few inches at the top. If you feel a slight draft, you can nail a strip of tin or wood several inches wide on the top window sash, facing upward at an angle of

# NATIONAL EFFICIENCY SOCIETY

The Ratio of Achievement to Effort is the True Measure of Efficiency

## SOCIAL EFFICIENCY

BY HENRY HERBERT GODDARD

DIRECTOR OF THE OHIO BUREAU OF JUVENILE RESEARCH

IT has been said that man has not yet completely adjusted himself to the upright position and that many of his physical ills and diseases come from the crowding of the internal organs downward toward the end of a tubular cavity, whereas in the more primitive horizontal position those same organs were spread out evenly resting upon the soft abdominal walls. It is also true that man has adjusted himself as yet only imperfectly to living in large social groups, or, as it is sometimes somewhat pessimistically stated: "Man is only partly civilized."

The sociologist tells us that the evolution of society has been thru the family, the tribe, the clan, to the nation, and that the goal is a world society with equality and justice for all. As a matter of fact we have not yet attained to the position of justice for all, on equality our ideas are utterly confused and largely irrational. Because of this we exhibit a great lack of efficiency as a social group. We find many people doing things that mar the efficiency of the larger group.

How to deal with these people, and how to reduce all to a harmonious whole is a problem, the solution of which is not yet in sight. Even as an ideal we have not attained farther than "the greatest good to the greatest number" and the social order which contemplates the greatest good for every one is hardly conceived. A large part of our difficulty comes from our crude and primitive way of attacking the problem. We not only talk of fighting the various social evils but we actually try to bring about such reforms as we conceive are desirable, by fighting the various groups of people who commit the anti-social acts.

The rational procedure on the other hand, as might be shown by many analogies, would be to attempt to understand these anti-social groups and learn the causes which led to these actions and to discover some possible modification by which the energy now going to activities that do not promote the welfare of the whole, may be diverted thru more useful channels.

One of our great handicaps in the past has been our inability to appreciate the relative intelligence of human beings. We have recognized in a general way that there are idiots and geniuses and some grades of intelligence between the two. But having, in the past, no way of measuring intelligence with any exactness we have had no appreciation of the relative numbers in the various grades.

Barring the two extremes mentioned, we have thought that most of humanity may be grouped rather closely together in intelligence, and we have attributed the differences found in actual experience, not to a real

difference in intelligence but to differences in education and opportunity. It is now clear that this is a fundamental error that lies at the root of much of our difficulty in social adjustment.

The group that fails to adjust itself to the accepted social order is made up of people who have not learned, not because they *would not* learn, but, on the contrary, are people who *could not* learn—people whose brains are so defective, if not in structure, at least in function, that they are not able to think logically even in regard to the various affairs of life. There are mental dwarfs just as there are physical dwarfs. The most startling fact in the whole problem is not that there are such people, but that there is relatively such a large number of them.

As already intimated, we have long admitted that there are a few people who lack intelligence, but we have not realized that the number was great enough to account for a large part of our most troublesome social problems. That is a discovery of the twentieth century and altho it was suspected earlier and believed in, by a few, has become really demonstrated thru the World War.

Professor Terman has assumed that the average intelligence is about that of a sixteen year old youth. At the beginning of the war the United States Government put into operation a system of mental tests by

which every drafted soldier was carefully examined and a mental rating given. As the result of these tests it became evident

that Terman's estimate of sixteen years is considerably too high. How much does not concern us here.

If the average intelligence proves to be around *fourteen* years (as seems likely) this means that there are a large number of people who have an intelligence of thirteen, almost as many of twelve, less of eleven, ten, and so on down in a decreasing scale. On the other hand there are many of fifteen, sixteen, seventeen and on up to whatever the limit may be.

The significance of this lies in the fact that when we get down to an intelligence of twelve years and below, we get to a group of people who are not, as a rule, capable of managing their own affairs. Indeed twelve years is usually considered the upper limit of feeble-mindedness. Those of intelligence of from eight to twelve inclusive are called morons. Not all morons are in institutions for the feeble-minded and it is probable that not all of them need to be so cared for; but it is equally certain that persons of that degree of intelligence are *relatively inefficient* and only escape being a drag on society, or, even an actual menace, because of some fortunate condition. These conditions may be favorable environment or a peculiar temperament whereby they may fit into some niche in the social order and become of some little use.

To illustrate: a person with a mentality of ten and a phlegmatic temperament may be content with the simplest satisfaction of creature needs, food, clothing and recreation. The simple work that he can do, digging, hewing wood and drawing water produces enough to satisfy these needs, and lacking ambition he passes his life as a harmless drudge, contributing somewhat by his labor to the common weal. The same intelligence coupled with a sanguine or nervous temperament is unsatisfied with so simple a life; he must have more and better food, drink and excitement. He can not earn enough to satisfy these needs by any of the cruder forms of labor so he aspires to jobs that require a higher intelligence than he possesses. The result is his incompetency causes damage and loss and he loses his position. Then he steals or seeks to meet his wants by fraud, deception or other anti-social methods. He makes friends with people of low character who use his stupidity to secure the performance of acts too dangerous for them to attempt by themselves. George March was a dairyman of some intelligence but of low morale. Rowland Pennington was a harmless feeble-minded boy of seventeen. March was angry at the su- [Cont'd on page 49]

### GETTING RESULTS IN SOCIAL CONTROL

*The State of Ohio, already well equipt for the care and treatment of delinquency, has gone far ahead of other states in an attempt to prevent it. Recent legislatures have passed a law establishing the Bureau of Juvenile Research and have appropriated \$100,000 for buildings. These are now being erected. Local surveys and the collection of important data are under way. The law permits any one having the care and custody of a child who is giving trouble, to ask the bureau to study and examine the child and make recommendations. This affords relief to perplexed judges of Juvenile Courts as well as to those responsible for delinquents not brought before the courts.*

*The staff of the bureau at present consists of a director, psycho-clinician, two assistant psycho-clinicians, one physician, and one clerk. Up to October 1 one hundred and thirty cases had been examined, of which sixty-two were diagnosed as feeble-minded, thirty borderline, five diagnosis deferred, twenty-three normal, one psychopathic. Examinations at present are confined to psychological and physical, but when fully equipt cases are to be studied by the most thoro and extensive methods. Investigations may lead to new methods.*

*In the new buildings will be physiological and X-ray laboratories, and a laboratory for blood tests, also histological and neurological laboratories.*

*It is estimated that from four to five thousand children will pass under the examination of the bureau in a year. It is clear that the work undertaken is a long step toward social efficiency.*

Rural Motor Express Line trucks, loaded with fresh vegetables ready to start on long trips to the neighboring large cities

# CARRYING MORE GOODS BY MOTOR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**W**E are on the threshold of a new era in transportation in this country, an era in which the highways will return to their old time importance and rank with waterways and railroads. The advent and development of the latter largely reduced the highway and its limited means of transport, the horse drawn vehicle which had developed but little in centuries, to serving as feeders for the railroads and waterways. The modern motor truck, with its enviable record in meeting the various transport needs and emergencies of wartime, is the factor which will bring the highways to a far wider field of usefulness. In fact nowadays highway transportation is synonymous with motor transportation.

The term highways really includes both city streets and country roads, but as generally used it is the roadway between urban centers that is meant. In this article the term is used with the latter meaning.

Motorized highway transportation in this country is already established, but only in the sense that railroads were established in the days prior to the Civil War. In other words its real development is still to come, and as railroad growth was so greatly stimulated in the reconstruction period following the Civil War, so will the reconstruction period upon which we are now entering witness a tremendous extension of motor highway transportation. This development was bound to come, but it has been hastened many years because war conditions afforded motor transport an opportunity to demonstrate its worth in a sufficiently spectacular manner to attract wide public attention.

At this time motor transportation over the highways is following four well defined courses, each of which may be termed a movement on account of the organized support which is being given it by governmental and other agencies. The popular names by which these movements are known are intercity motor haulage, rural motor express, return loads with its companion store door delivery (the latter being largely a city street proposition) and the "farm to table" parcel post service. Inseparately interwoven with each as far as efficiency and real success is concerned, is the need for improved roadways, systematically developed thru main trunk lines and feeders, and not haphazard as has been the case in the past.

Intercity motor haulage has made the greatest and most natural growth to date of the four, and in point of tonnage promises to always be the leader. It involves the carrying of freight and express matter from

one city to another over distances of from twenty miles to three hundred miles. Fifty miles may be taken as the length of the average route at this time, but future development will extend this average to about one hundred miles. The highway between Cleveland and Akron, Ohio, a distance of forty miles, undoubtedly represents now the maximum development in intercity motor haulage, and is carrying each twenty-four hours an average of four thousand tons. The big tire manufacturing companies of Akron are mainly responsible for this high tonnage on this particular highway. The ninety-six mile highway between New York and Philadelphia handles less than one hundred tons daily, altho with equal development of the new method of transportation it should many times exceed the other. This intercity service via the highways is furnished principally by operating companies, which show a marked tendency toward rapid growth despite intense competitive methods. The next step will be coöperation and combination, and then we will have highway transportation systems comparable in size, tonnage handled, and mileage covered, with many second class railroads of the present time. Many of these companies are organized and operate according to standard railroad practise, running over regular routes on established schedules, and having freight solicitors, claim departments, etc.

The latest development in intercity motor haulage and in the entire field of highway transportation is the advent of the so-called big pneumatic tire which has been used in place of the standard solid rubber tires on motor trucks up to five tons' load capacity. It is the product of Akron tire makers, one of whom has been operating a private motor transportation service between that city and Boston, via Philadelphia and New York, for about a year, in which the various trucks used are equipt with these new tires. The distance of 740 miles each way is covered regularly at an average speed of fifteen miles an hour, the trucks traveling

day and night with two drivers, who take turns in sleeping, there being two bunks back of the driver's seat. It is claimed that on

these big pneumatics, which are made as large as 40 by 9 inches, a motor truck rides as comfortably as a Pullman railway coach; also that on the level speeds are attained ranging up to forty miles an hour (the trucks having special gearing and extra powerful motors). While these tires are more expensive than solids by a wide margin, it is claimed that the saving in wear and tear on the vehicle, in fuel, etc., will give a lower ton mile operating cost. It is also claimed that with them a motor truck readily negotiates deep snow and mud and generally has better traction under all conditions. Therefore their advent at least means double the prevailing speed in highway transportation. In sending thousands of its motor trucks from the point of their manufacture in the Middle West to the Atlantic seaboard over the highways, often carrying a "paying" load, the United States Army has also demonstrated the possibilities of long distance motor haulage.

Another development in the highway transportation field is the motor truck train, i. e., the motor truck hauling one or two loaded trailers in addition to its own load. Theoretically a motor truck has a draw bar pull equal to three times its load capacity, but in practise and under normal conditions it will readily haul a load equal to the one it carries. On hard roads where there are no excessive grades the use of trailers is entirely practical, and their use will increase the efficiency of operation and help reduce the ton mile cost to the shipper, which is essential if motor highway transportation is to develop widely. It is highly probable that many shippers will own trailers and send them over long distances, the hauling being done by several motor truck operating systems in turn, just as the railroads now handle privately owned freight cars.

Rural motor express is another movement in the highway transportation field which has wide opportunities for development. Its purpose is to open avenues of communication between rural districts, especially those with inadequate railroad facilities, and the cities. It will carry farm products into the cities, and in so doing encourage their increased production, and take back to the farms those commodities which farmers require. This movement began in a small way several years ago in different parts of the country and was slowly growing when war conditions called for a stimulating of food production and its prompt transport (Continued on page 499)

*Ask the Motor Efficiency Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is ready to give full and impartial information about any individual product*

# THE NEW BOOKS

## Heroes of Aviation

**N**EITHER artillery, small arms, nor any other form of war destructiveness has developed with the speed of aviation. Fiction and moving pictures have given us the romance of this new force but seldom has a more interesting tale of real fact been created than *Heroes of Aviation*, by Lawrence La Tourette Driggs.

Mr. Driggs, far from unknown in the literary field, is as much at home on the aviation field as Bill Hohenzollern wishes us to believe he is in Holland. He presents an introduction to his work which in itself is a word picture of aviation in absorbing epitome.

Then chronologically he relates the story of the American Lafayette Escadrille. It leads one to wonder why even an American would so willingly join and fight to join such an apparent suicide organization.

To all of the original group which included Kiffin Rockwell, Norman Prince, James McConnell, Victor Chapman, Bert Hall, Capt. William Thaw, and Major Lufbery, Mr. Driggs pays the tribute which even dare-devils deserve.

The work of French aviators is treated in one section, with most thrilling accounts of such men as George Guynemer and René Fonck.

The English with Albert Ball, the twenty-year-old English boy as their leading ace, the Italians, the Canadians, the Russians and even the Germans all come in to complete this story.

Inasmuch as no history craving American can later on absorb the whole allopathic dose of "America in the Great War," it may be well for us to suggest that he or she begin to bite it off in small chunks, especially when such a volume as this is waiting, and when the mastication can be done with such thoro satisfaction and enjoyment.

*Heroes of Aviation*, by Lawrence La Tourette Driggs. Little, Brown & Co. \$1.50.

## Our Admirable Betty

**A** romantic tale of the early eighteenth century treated in the approved Farnol fashion. It has less, perhaps, of that tang of by-roads and hedges which created so breezy an atmosphere for "The Broad Highway," yet possessing, nevertheless, a roistering, God-ha-mercy swing capable of carrying the reader back for a breathing space from the tense gravity of today to that blithe period when the gentlemen were all of leisure and ladies lived but to be wooed.

Lady Betty Carlyon is a winsome, if tantalizing, heroine, and Major D'Arcy man enough to dominate the worn peruke and shabby coat in which we meet him first. That the much-courted Elizabeth—"the toast adored, who is seen but to be worshiped," had the discernment to favor him above all her other suitors is so greatly to her credit that one can forgive her, as did the Major, many puzzling pranks. Once or twice, however, her behavior is so free, even for a self-confest hoyden, that it is a real relief to discover that after all it is her brother Charles who—but therein lies at least a portion of the tale.

One finds, moreover, in the story, a ghost, a proper villain, and humor enough to keep the pace merry, so

that it all makes very pleasant reading. Indeed the trusty Sergeant Tring might have been speaking of the tale itself when—"Glory be," he exclaims—"All I says is—Joy!"

*Our Admirable Betty*, by Jeffery Farnol. Little, Brown & Co. \$1.60.

## The Unpardonable Sin

**A**LL the horrors of war are piled into one girl's experience and described with almost unendurable intensity in *The Unpardonable Sin*, by Rupert Hughes. It is a story of Belgium in 1914, of the German occupation with all its brutality and filth and desecration. The descriptions are vividly detailed, their loathsomeness seems almost incredible to us three thousand miles away; but the facts on which the story is based can all be proved, not once but many times.

*The Unpardonable Sin* points with unescapable vigor one of the chief lessons of the war and fixes its moral by incidents too graphically real in their horror to ever be forgotten.

It is more than a lesson. It is a challenge to every decent human being to help crush out forever any possible recurrence of what Germany has done.

*The Unpardonable Sin*, by Rupert Hughes. Harper & Bros. \$1.50.

## Playing to \$32,000 a Night

**I**N the introduction of *The Greatest of These*, Laurette Taylor threatens to make this her first and only book. But it is so little, so natural and so delightful, that we hope she won't carry out the threat. If you have ever had the opportunity to talk with Miss Taylor informally off stage you will not need to be told that the book is full of the piquancy of Laurette Taylor conversation. Miss Taylor writes just as she talks.

*The Greatest of These* is a series of extracts from the actress' diary while tour-

ing the country with the all-star cast that presented Hartley Manners's play, "Out There," for the benefit of the Red Cross. Each page shows increasing enthusiasm for the big heartedness of the American people who paid fabulous sums for tickets and for autographed programs.

But among the most enjoyable parts of the diary are the glimpses of the eccentricities of the members of the company, and the personal incidents of the trip. Even if you're not interested in stage folk you'll enjoy reading about these. And if you are—well, then you'll read the book anyhow.

*The Greatest of These*, by Laurette Taylor. George H. Doran Co. \$1.50.

## In the Haunted House

**I**F we were a betting man, we wouldn't mind betting that any one who picks up this book and reads it straight thru—it is quick reading!—won't be able to put it down until he has turned the last page. Any reviewer is on honor not to tell the story, and any reader is on honor not to skip and look at the end before the author would have him. Then for an hour of oblivion and complete absence of any emotion save interest and curiosity:

I'd like to go to a house that is reputed haunted, and in circumstances that preclude all possibility of fraud, see the haunting spirits or hear them, for myself.

So they found a house at last, a party of them, and took it for a month. Then the fun began.

*The Room with the Tassels*, by Carolyn Wells. George H. Doran Co. \$1.40.

## Elizabeth's Campaign

**M**RS. HUMPHRY WARD'S new book will probably command a larger American than English public, for it is a war book of English life, providing as usual a certain observation of and sympathy with the outlook and ways of the English leisured class, and a complete detachment from the profounder currents moving in the English nation and thruout the whole world.

To Mrs. Ward this war was still another English war, and we doubt if she can see any but a purely national end to it.

*Elizabeth's Campaign*, by Mrs. Humphry Ward. Dodd, Mead & Co. \$1.50.

## Jamesie

**E**THEL SIDGWICK'S *Jamesie* is a very difficult novel to read. It is made up of letters, which are apt to make rather exacting reading in any case, and letters from so many people all at once that it takes real mental gymnastics to keep up with them. It is a little hard to forgive Miss Sidgwick for doing this. She writes such fascinating novels and it was so good to see another!

This is the first novel in which Miss Sidgwick has concerned herself with the war and thus it holds keen interest as revealing its effect on one of the finest of the English novelists. She has made it tell in her character study of every person in the large group with which she deals, and she has diverged from the common paths in using *Jamesie*, the child of her novel, as the central figure for the tragedy.

*Jamesie*, by Ethel Sidgwick. Small, Maynard & Co. \$1.50.

Press Illustrating

Lawrence La Tourette Driggs, aviator and author of "Heroes of Aviation"

## CONFESSIONS OF A MOTION PICTURE PRESS AGENT

(Continued from page 398)

brink of war and Americans recked little what their statesmen did or thought concerning any lesser issue. The dramatic picture lasted about as long as the spectacle.

It is often asked, Does extravagance still prevail in Filmland? Yes; but it has been reduced materially, and will be still further curtailed by the war. Perhaps half a dozen popular screen idols net a personal income of several hundred thousand dollars each per annum. It should be understood clearly that they "draw" this, i. e., each attracts a total patronage so enormous that the stars' salary is only a fair percentage of the intake. Indeed the compensation is scaled on this very basis: 65 per cent of the receipts of a picture goes to the public favorite who made it. Out of that 65 per cent he or she must defray all the production expense—an arrangement which obviously encourages economy. The other 35 per cent of the picture rentals from the cinema theaters, goes to the distributing company. These companies have shortened sail, and some of them are running at half-mast. The average cinema actor is not overpaid. Gentlemen of swollen wealth are no longer taking "fliers" in the films, there's so much else to spend money on in these parlous times; picture magnates have quit vying with each other as to "million-dollar spectacles"; the bidding up of stars from the theatrical world has stopped altogether.

Another query: Why don't the manufacturers make useful pictures? Simply because they're purveyors of commercialized amusement, no more called upon to produce educationals than fiction publishers are to issue textbooks. *The impulse toward useful pictures must come from the outside.* Educators must be won over to the cause of cinema instruction, and the eyes of philanthropists opened to the fact that film universities are exactly as important as book libraries or college professorships.

On the side of artistry, the fiction-picture has improved vastly thru the recognition of the scenario-writer. We no longer hear of the director "throwing away the scenario" and relying on his Caesar-like self to complete the story. It is found better and cheaper to hire able authors and advertise their collaboration than to steal ideas or to plagiarize unconsciously. Any kind of a first-class scenario gets at least \$500. Magazines and books are scrutinized for good stories by known authors, and the filming rights are bought for round sums. It is even beginning to dawn on the trade or the craft or whatever you like to call the motion picture industry, that "scenic productions" and other Persian apparatus have little to do with artistic excellence. Given a handful of players, an author's creativeness, and a director's skill, and you have the potentiality of a masterpiece.

I cannot believe that the present system of a dozen giant corporations—each centering in itself the functions of producing, exploiting and distributing—is the best for artistic development. The product is too apt to be of a machine-like character, and it seems to me that better results could be obtained with the production units kept separate and distinct. Two or three big sales agencies could furnish all the distribution necessary for the United States. The first three years of the war gave the United States an overwhelming lead over all the other nations in the international film mart. In the trade war that will follow the military struggle, economy and efficiency will be the watchwords.

### METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES BLACKWELL'S ISLAND, NEW YORK CITY

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## A LEAGUE OF CLASSES

From an Address to the Association of National Advertisers

BY B. C. FORBES

**B**EFORE very long I believe that there will be a job for every capable, willing worker in America, both men and women. Our deficiency of 2,000,000 laborers, caused by the cessation of immigration during the war, will not be immediately made up, for it appears certain that European governments will take steps to prevent any wholesale exodus of their robust citizens to this country or any other part of the New World. Men are needed there more than they are needed here. While, of course, the wholesale cancellation of war contracts will release one or two millions of workers—and we can expect cancellation of war contracts to be conducted with very great dispatch—several new and important demands upon our supply of labor have been born during the war.

For example, we are to have a new mercantile marine fleet of some 3000 vessels. These will employ on board at least 200,000 men of all grades from stokers and deck hands to officers and engineers. A far greater number of men will be required on land to attend to the operation of this vast fleet.

Then Mr. Schwab assures us that shipbuilding will continue to employ many thousands not only thruout 1919 but permanently. And Secretary Daniels plans to carry out his ambitious naval program just as if the war had been going on.

The millennium has not yet arrived. Present indications are that the United States Army will not be allowed to shrivel up to its insignificant pre-war dimensions.

Moreover, we have developed several new industries since the Kaiser dropt his hat to start the war. It is now universally admitted that our Liberty motor is the best aircraft engine yet devised and flying appeals so strongly to virile, courageous, dare-devil Americans that the building of flying machines and flying boats is likely to become one of our lusty infant industries.

Germany has lost more than her colonies and Alsace-Lorraine—and her honor—by the war. Her virtual monopoly of the dye industry and the chemical industry has been annulled. The inventive genius of America proved equal to the occasion. We have also declared our independence of Germany's supplies of potash. Even the toy industry has not been overlooked.

What of our foreign trade? Europe is as direly in need of our merchandise now as she was in need of our war materials during hostilities. Shelves are bared in virtually every part of the world. The United States must take the lead in replenishing.

No, a careful survey of the whole situation does not support the theory that we are to have Coxey's armies marching upon Washington from every part of the country to demand work. If need be, the Federal Government, state governments, municipalities and other public bodies, could start great schemes for public improvements.

On the whole, I expect the processes of readjustment to be carried out without any tremendous hardship either to employers or their workers. I feel confident that before the new year is very old, business from one end of this country to the other will be booming. The world will be clamoring for our goods as well as for our raw materials. I believe that 1919 will see an era of prosperity such as we have never witnessed.

But

There is a very big but.

The whole cataclysm of the last four years sprang from the struggle between

autocracy and democracy. America's part and the part of the Allies has been "to make the world safe for democracy." Well, we have succeeded in making the world too warm a place for autocracy.

But is there not now confronting us just as there is confronting Europe the problem of making democracy safe for the world?

Our great problem in America is not the reconstruction of our industrial plants. Our great problem is the readjustment of our human relations. What we in this country need as much as a League of Nations is a league of classes. We have not had that heretofore. There are increasing symptoms that we may not have it for yet a little while. Let us be entirely frank. The working classes of this country as well as the public in general feel that they have certain scores to pay off. Ten, fifteen and twenty years ago capital—it cannot be truthfully denied—was arrogant. It rode a high horse.

Now, I rather fear, the pendulum is about to swing too far in the other direction. It certainly *will* swing too far unless the business men of this country exercise a high order of statesmanship. Labor has begun to feel that it now has the power to do what it likes; labor, formerly the under dog, is beginning to feel that it can become the upper dog. It is beginning here and there to act high-handedly, to exercise absolutism. Labor aspires to climb to the perch vacated by capital.

We are facing a delicate and, it may well be, a dangerous situation. We can either fan the incipient flames of Bolshevism or we can contribute to bringing about sanity, democracy and peace.

Our task is to spread education, to inculcate sound doctrines into the mind of the track walker on the railroad, into the mind of the mechanic at the bench, into the mind of the man who drives the wagon and team, into the mind of the student at evening school or university; also into the mind of the employer, whether of a dozen workers or 10,000 workers.

The duty of each one of us now is to endeavor to bring about genuine democracy in business and in industry. Capital, if it has not already done so, must vacate its throne of absolutism. Labor must be made to see for itself that it cannot with profit to itself attempt to become arbitrary, arrogant, dictatorial, that the public will not stand for autocracy, or absolutism from any quarter. What we must strive to reach is a complete understanding between employers and employed. Those at the top must meet the rank and file half way. There must be no attempt, should workers become more plentiful than jobs, to "teach labor a lesson," by wholesale firing, by drastic cutting of wages or by other harsh, haughty methods. There is less danger from this source, however, than there is from the other because capital has pretty well learned its lesson. Labor, however, is just beginning to feel its strength. It has got the bit in its mouth during the war. Labor, indeed, has been having its own way entirely. This was all very well and perhaps necessary while everything was on the upgrade, when maximum production was essential no matter at what cost. But a recession in prices and in wages, to my mind, is inevitable. The readjustment will be impossibly difficult if the Bolshevik spirit gain ground.

Remember that nothing is ever settled until it is settled right

## CARRYING MORE GOODS BY MOTOR

(Continued from page 405)

to the cities. The Highways Transportation Committee of the Council of National Defense then undertook its promotion and largely delegated the work to a committee of the National Automobile Chamber of Commerce, which has handled the task in a big way and achieved excellent results. It enlisted at the start the coöperation of automobile dealers thruout the country and in a number of instances the latter have actually financed and operated rural motor express lines.

A distinct branch of rural motor express is the hauling of live stock to the slaughter houses. On a recent day 574 motor truck loads of live stock arrived at the Union Stock Yards at Indianapolis, Indiana. During the first six months of this year 92,708 hogs were hauled to the Omaha market by the same means.

The "farm to table" parcel post, described at length in the August 17 issue of The Independent, is a separate movement in this same field and one of great promise. The possibilities in connecting city and country by motor lines is shown by the following statement from an address by Fourth Assistant Postmaster General James I. Blakslee, at the recent Motor Transportation Conference in New York City: "The people of this city pride themselves on their exceptional railroad facilities. Yet our investigations show that a hundred different motor truck routes can be laid out between this city and adjoining rural sections, averaging 75 miles in length, all of which traverse districts not now reached by railroads."

## SOCIAL EFFICIENCY

(Continued from page 404)

perintendent of the form and wanted to kill him. He persuaded Pennington to help him, with the plan of putting all the blame onto Pennington and himself escaping. He miscalculated, however, and both were executed in Pennsylvania in 1916.

We are fighting a losing battle! Why? Evidently our tactics are wrong. We have wasted our energies attempting to reform people whose *nature* is such that they can not be reformed. We must reform our methods, and our reform of methods must be radical and based on *facts*. The great fact that must be made fundamental is that lack of sufficient intelligence to adapt themselves to their environment is the explanation of the anti-social conduct of men and women as a rule. If we would have an efficient social group we must first determine the intelligence level of all children. This can now be done with the highest degree of accuracy. The next thing is to determine the kind of training that is suited to each degree of intelligence. All those whose intelligence is too low to enable them even to adapt themselves to the necessary conventions of modern organization must be cared for in an artificially simplified environment and kept from reproducing their kind. Weak mindedness is always as *hereditary* as strong mindedness.

In conclusion, social efficiency requires that we (1) devote a minimum of our energies to the present adult anti-social groups, (2) ascertain the children now growing up who because of lack of intelligence would, if left to themselves, replenish the ranks of the anti-social; care for them so they can not become social problems, and (3) see to it that the future supply is largely cut off by preventing reproduction by those of weak intelligence.

# Say it with Flowers

Whose Birthday is in

1918 DECEMBER 1918						
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

This year your Christmas giving must be influenced by motives of patriotic conservation. Plants and flowers combine magnificence and beauty with appeal to the higher senses. They are more able conveyers of true sentiment than any man-made creations.

Plants and flowers are *nature's* product. To send them this year as Christmas gifts or New Year's remembrances is practical patriotism. It preserves, *even increases*, the Christmas spirit — it interferes with no government program — it aids your *thrift* efforts, since plants and flowers are comparatively modest in cost.

Visit your florist's shop. See for yourself the exquisite gift creations of the floral craft. You'll be amazed at what may be purchased at a trifling cost.

*Do you know that by the use of the Florists' Telegraph Delivery Service you can have your order delivered in any city anywhere in the United States or Canada in a few hours?*

# SAVE COAL

-but have heat

Detroit Residence of  
Thomas H. Newberry is  
Chamberlin equipped

**80% of your  
Coal is yet  
to be used**

**STILL TIME** this season to save 1-5th to 2-5th of the coal you burn if you equip NOW with Chamberlin and seal those  $\frac{1}{8}$  in. to 1-16th in. heat escapes around your windows.

Chamberlin repays its cost in 4 years—outlasts the building. Simplest, most weather-tight and trouble-free. Nearly twice as many places Chamberlin'd as all others combined prove it excels.

Guaranteed 10 years by world's largest, oldest, most experienced weatherstrip makers, backed with paid-up capital of a half-million and a quarter century reputation, Chamberlin can be installed ONLY by skilled mechanics from our direct factory branches.

## The Chamberlin'd Window

Keeps in heat, bars out cold, drafts, dust, soot, rain, snow, damp, deadens noise, prevents rattling and "rattling"—for the life of the building. There's nothing to wear out.

## Prominent Users of Chamberlin Strips include:

J. P. Morgan, Jr.  
Eliza Root  
Thos. A. Edison  
F. H. Gary  
Wm. G. McAdoo  
W. K. Vanderbilt  
Charles D. Gibson  
Chas. M. Schwab  
Chauncey M. Depew  
Harry P. Whitney  
—and hundreds of thousands of others

Such people will have none but the best. Hence their homes are Chamberlin'd.

# CHAMBERLIN METAL WEATHER STRIPS

# Spend the Winter at LAKELAND FLORIDA

Solve the high cost of living, escape worry over coal shortage, enjoy the delightful climate.

Where you may secure a life income by investing in a 10 acre grapefruit or orange grove, scientifically cared for by low cost co-operative methods.

A planted 10 acre grove costs \$4,950, payable 20 per cent down, balance in quarterly installments.

Many grove owners are now earning from \$500 to \$1,000 net a YEAR PER ACRE; names and addresses furnished on request.

Our illustrated booklet answers all questions. Write for a copy and read it. Then if you are in position to finance a grove, visit the property and spend a week at the Country Club as our guest.

**W. I. HALLAM & CO., 225 5th Ave., N. Y.**

**Send Your Name and We'll  
Send You a Lachnite**

**DON'T** send a penny. Just send your name and say, "Send me a Lachnite mounted in a solid gold ring on 10 days' free trial." We will send it prepaid right to your home. When it comes merely deposit \$1.75 with the postman and then wear the ring for 10 full days. If you, or if any of your friends can tell it from a diamond, send it back. But if you decide to buy it—send us \$2.00 a month until \$18.75 has been paid.

**Write Today** Send your name now. Tell us which of the solid gold rings illustrated above you wish ladies' or men's. Be sure to send finger size.

**Harold Lachman Co., 12 N. Michigan Av., Dept. 2480 Chicago**

# A TALK WITH ADMIRAL SIMS

(Continued from page 394)

five of the submarines that leave Germany and therefore recruiting for submarines has been now absolutely stopped in the Fatherland. The sailors have to be impressed.

The admiral thought the German submarines were ordered to fire on any convoy they could get near. Nevertheless he did not think they always obeyed such orders on account of the great risk. "As only one man looks thru the periscope," said he, "who knows whether the quarry has been seen or not?" The admiral did not care whether Germany was building submarines faster than we can sink them, because the certainty of bringing into European waters this year of our many new first class destroyers together with the destroyers that England and France are building was sufficient to insure the Allied supremacy on the sea.

I asked him why the Grand Fleet did not attack the Kiel Canal. He said it could get into the canal any time it wanted to by making a lane thru the mine fields, but this, he said, is not important for the present. Both England and Germany have boats perpetually laying mines and sweeping mines in front of the German coast.

The United States had lost only one destroyer at the time I saw Admiral Sims, and I believe this record still holds. Another was hit in the stern but managed to get to shore with no lives lost. The admiral told me when a submarine sinks very few lives except those in the conning tower are saved. In fact they do not try very hard to save anybody, because it is useless. I asked the admiral whether it was true that the Germans have the shore plotted out every ten miles and have submarines lying at the bottom so as to relay messages all along the coast. He did not think that this was the case. But he did say that Germany does not have more than five submarines operating at one time in any coast sector. After their twelve torpedoes are fired they have to go home, where they generally stay nine months for repairs.

The admiral, as Ambassador Page subsequently told me, did not believe in publicity for the navy when he first arrived in London. But he had evidently changed his mind by the time I saw him. For he had not only given permission to reputable correspondents to visit the American fleet, but he told me that I could take a trip on a destroyer at any time I desired, and before I left him he dictated a letter to Admiral Wilson in Brest giving me this permission. It is the one regret of my trip that I did not avail myself of this unique opportunity. But perhaps it is just as well after all, for there is no worse and more uncomfortable trip on the surface of the ocean that a man can take. As I am one of those unhappy persons whose diet usually consists of one grape on a voyage across the Atlantic I suspect that if I had essayed the trip on a destroyer I would probably have suffered the tortures of the damned and have been taken off on a stretcher when we finally returned to shore. Nevertheless I would have risked it had not my unexpected trip to Italy prevented.

I do not see how Secretary Daniels could have made a better selection for the commander of the American fleet in European waters than he has done in Admiral Sims. The United States Navy under his command has certainly done 100 per cent of what it is capable of. The admiral does not blow his own horn, but he has "delivered the goods." His work should be appropriately recognized by the American people.

# What's Coming?

## GERMANY'S NAVAL DISGRACE

(Continued from page 399)

list. So powerful a battle line has never yet gone into action. The fighting sailors of Germany had over and over again announced themselves eager for the fray. During the war and for years before, "Der Tag," when the British and German fleets should fight to a finish had been regularly toasted in every wardroom mess.

Would the ships be given up? Those who had steadfastly insisted that they would be destroyed in preference to surrender found new adherents. Those who knew the spirit of all the great sea fighters of the past, regardless of nationality, insisted that it lived in Hun sailors as well as in those of other nations and that the ships would go out with the ensigns of the Iron Cross at their mastheads, and go to the bottom with them still there. No matter who manned the vessels, if they were sailors, a battle was inevitable.

On November 21 the ships were told to turn their turrets so as to bring their guns pointing fore and aft and so not on the broadsides, and come out. They were ordered to go to the Firth of Forth. They obeyed, meekly. They arrived, to find the Allied fleet awaiting them. And, without a gesture of resistance, the German officers surrendered, meekly, amid the contemptuous silence of their brothers-in-arms. The German flags were hauled down. Only then was a mild protest ventured by the German Admiral, cut short by the curt reply that enemy flags could not be displayed in British harbors. And there in the Scottish waters now lie the disgraced ships awaiting their captors' disposition.

There is not a fighting seaman alive—other than a Hun—who will not insist from the bottom of his soul that those ships should have come out long ago and fought and fought until the North Sea closed over them. American ships, British ships, French ships, Italian ships all would have done it. Nothing in all naval history furnishes a precedent for this abject and ignominious surrender. Even Persians fought gallantly at Salamis, and the resistance of Mark Antony's vagrants, ass-drivers, reapers and boys afloat for the first time at Actium was magnificently desperate.

This is what happens to a navy without traditions, a machine-made navy itself a machine, a navy of yesterday, for it is less than half as old as our own, and of mushroom growth beside the "wooden walls of England" which for eight centuries have defined the "freedom of the seas," a navy with none of the inspiration which comes from the great names of Nelson, Suffren and Farragut.

"Indeed he (Themistocles) first ventured to tell them they should apply to the sea and then immediately assisted them in acquiring the empire of it.—Thucydides Lib. 1, cap. xciii.

"Pericles the son of Xanthippus came forward and gave the following counsel: . . . Of vast consequence indeed is the dominion of the sea; for consider had we been islanders who would have been less open to attack than ourselves?"—Ibid. Lib. 1, cap. cxliii.

More than a score of centuries later that counsel defeated the German navy.

There seems to be a new Ford joke: An officer went to a room where there were a lot of recruits, and asked: "Any one here who understands a Ford?" They all answered in chorus: "I do." Whereupon the officer said: "Well, go down to the cook house and help turn the crank of the ice cream freezer.—House's Monthly.

T. W. MOFFAT, Treasurer.

## UTAH COPPER COMPANY.

120 Broadway, New York, December 6, 1918.

The Executive and Finance Committee of Utah Copper Company have declared for the quarter ending December 31st, 1918, a dividend of two dollars and fifty cents (\$2.50) per share, payable December 31st, 1918, to stockholders of record at the close of business on December 16th, 1918.

The books of the transfer of the stock of the Company will remain open.

C. K. LIPMAN, Asst. Secretary.

## RAY CONSOLIDATED COPPER COMPANY.

25 Broad St., New York, December 6th, 1918.

The Executive Committee of the Ray Consolidated Copper Company has declared, for the quarter ending December 31st, 1918, a dividend of seventy-five cents per share, payable December 31st, 1918, to stockholders of record at the close of business on December 16th, 1918.

E. P. SHOVE, Treasurer.

## THE NEW YORK CENTRAL RAILROAD CO.

New York, December 11, 1918.

Conditioned on the approval of the Director General of Railroads being given, a Dividend of One Dollar and Twenty-five Cents (\$1.25) per share, on the Capital Stock of this Company has been declared payable February 1, 1919, at the office of the Treasurer, to stockholders of record at the close of business January 3, 1919.

For the purpose of the Annual Meeting of Stockholders of this Company, which will be held January 22, 1919, the stock transfer books will be closed at 3 P. M. January 3, 1919, and reopened at 10 A. M., January 23, 1919.

MILTON S. BARGER, Treasurer.

## UNITED FRUIT COMPANY

## DIVIDEND NO. 78

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on January 15, 1919, to stockholders of record at the close of business December 20, 1918.

JOHN W. DAMON, Treasurer.

## AMERICANIZATION

is one of the important features of present day effort and thought among business executives and students of economic and social conditions.

The November (1918) Number of  
**NATIONAL EFFICIENCY QUARTERLY**  
edited by Miss Frances A. Kellor, is devoted entirely to that subject.

Illustrated, \$1.00 a copy      Remit with order

**NATIONAL EFFICIENCY SOCIETY**  
119 WEST 140th ST.      NEW YORK

## HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

ENGLISH; LITERATURE AND  
COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

## I. Work for Young Students.

1. Imagine that you are a Czecho-Slovak boy with the Czecho-Slovak troops in Siberia. Write a letter to your cousin in Prague telling him what is happening to you and your people, and how you feel about it.
2. Give your class a clear explanation of the derivation of the word "Rumania."
3. Tell the story of Rumania's experience in the Great War. Use simple sentences only.
4. Tell the story of Browning's "Pied Piper of Hamelin."
5. Explain how Browning's "Pied Piper" accounts for the Germans in Transylvania.
6. Imagine that you have been appointed officially, to tell your class about the recent revelations concerning pro-German plots. Give a clear, straightforward, patriotic talk.
7. Explain, as if to a group of returned soldiers, what steps are being taken to provide work for our veterans.
8. Draw a map to show the position of the Baltic Provinces. Give an oral account of recent events in those lands.
9. Imagine that you have a brother with the American troops now in Germany. Write the letter that he might have written telling of his experiences.
10. Write an original short story in which you tell of the adventures of a boy, or a girl, during the recent events in Berlin.

## II. Work for More Advanced Students.

1. Sum up briefly the argument in "A League of Classes."
2. Write short paragraphs on the significance of any two cartoons in this issue of *The Independent*.
3. Write a composition on a subject suggested by one of the News Pictorial pages.
4. Sum up the main points in the article on "Social Efficiency."
5. Write an account of an imaginary submarine pursuit and capture.
6. Present a series of arguments in favor of increasing America's naval strength.
7. Which of the poems in "Poets of Today" do you like best? Give reasons for your choice.
8. Read aloud any one of the three poems in "Poets of Today," reading it in a way that will emphasize its thought.
9. Select what you consider the most vital editorial article. In a single sentence give the main thought of the article. Show how the writer supports his principal thought.
10. Give an oral description of the appearance of Admiral Sims.
11. Explain how the British and American navies cooperated.
12. Explain how the destroyers overcame the German submarines.
13. What characteristics make Admiral Sims an admiral of whom we may be proud?
14. Imagine that you are speaking before the graduating class at Annapolis. Contrast great events in the lives of Nelson and Farragut with the astonishing scene of Germany's naval disgrace.
15. Give a full explanation of the following sentence: "Nothing in all naval history furnishes a precedent for this abject and ignominious surrender."
16. Write an original short story in which you imagine romantic events centering around Marie Adelaide, Grand Duchess of Luxemburg.
17. Give a clear oral account of the history of Luxemburg.
18. In a single paragraph summarize the important points presented in "Keeping the Nation Fit."
19. Write a brief of "How to Master Efficiency."

HISTORY, CIVICS AND  
ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

I. Supremacy of the Sea—"A Talk with  
Admiral Sims," "Germany's Naval Dis-  
grace," "A Bigger Navy."

1. What part did the American navy play in winning the war? Does this offer any justification for the program of naval expansion proposed by Secretary Daniels?
2. In view of the Allied naval supremacy during the last year of the war, why did the Grand Fleet not attack the German navy in the Kiel Canal?
3. Explain the steady loss of morale from which the German navy suffered after the battle of Jutland.
4. "Nothing in naval history furnishes a precedent for this abject and ignominious surrender." If historical precedents are any criterion, what would the British or American navy have done if it had been placed in the same position as the German navy?
5. What is the present attitude of England toward its navy? Can this attitude be reconciled with President Wilson's demand for freedom of the seas?

II. Luxemburg, "A Plaything Among the  
Powers"—"A Land Without a Coun-  
try."

1. What is the significance of the title of this article?
2. By the aid of an encyclopedia, supplement the history of Luxemburg which is sketched by the author.
3. "The Grand Duchy might be called an experiment in international arbitration." Show how the history of the duchy is a sort of index to the diplomatic history of Europe for the past two centuries.
4. What lesson does the author draw from the diplomatic history of the duchy?

III. Europe in Revolution—"Kossuth's  
Prophecy," "Story of the Week."

1. "Europe in 1918 is like Europe in 1848." In what respects is this true? Wherein does the analogy fail?
2. What evidence is there in this week's issue to indicate that revolution is spreading? Is being stamped out?
3. "This reads like President Wilson's fourteen articles," etc. How many of the fourteen articles bear some resemblance to the statements made in Kossuth's speech?
4. "We recall this history now . . . to show the danger involved in the present situation." How does the history of the revolution of 1848 serve as a warning at the present time? What remedy should be applied if we wish to prevent a recurrence of the series of events which followed the revolution of '48?

IV. American Transportation Problems—  
"The Inland Waterways," "Carrying  
More Goods by Motor."

1. "In many instances the railroads . . . killed off competition by water." How was this accomplished? In what way can this competition be restored?
2. "We are on the threshold of a new era in transportation in this country," etc. What will be the characteristics of this new era?
3. Why was "railroad growth so greatly stimulated in the reconstruction period following the Civil War"? Why "will the reconstruction period upon which we are now entering witness a tremendous extension of motor transportation"?
4. What will be the economic effect of the new motor transportation upon American agriculture? American industrialism?

V. Production and Consumption of Wealth  
—"Getting Rich."

1. Give a brief account of the "Marxian philosophy" and of the "single taxers'" doctrine of rent.
2. ". . . labor and rent are not the only things that can be exploited." What does this sentence mean?
3. Give some examples of the "worthless indulgences" referred to in the editorial and discuss them from the point of view of the relation between necessities and luxuries.
4. What is the economic justification of the stock exchange? What method, if any, can you suggest for minimizing the evils referred to in the editorial?
5. "In an ideally just society there would be neither exploitation of labor nor monopolization of natural advantage." What measures must be taken to bring about the ideals?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. Entered at the New York Post Office as second-class matter March 28, 1918, under Act of March 3, 1879. Copyright, 1918, by The Independent. ## REMARKABLE REMARKS

**DOROTHY DIX**—Women take love harder than men do.

**CHAUNCEY M. DEPEW**—The calamity howler is again abroad in the land.

**OTTO H. KAHN**—Let us shun the descent into the valley we have left behind.

**DR. HARRY EMERSON FOSDICK**—The League of Nations will be no tea party.

**EX-CROWN PRINCE**—I pride myself on being a sportsman of the best English type.

**PREMIER KURT EISNER**—I don't want to be a statesman. I want to tell the truth.

**CHARLIE CHAPLIN**—All my pictures are built around the idea of getting one into trouble.

**SECRETARY DANIELS**—The day of isolation of the United States has passed for good and all.

**JOHN D. ROCKEFELLER, JR.**—In the religious world there is more need of a brotherly spirit.

**WALT MASON**—All Europe is strewn with dead men's bones because some chumps are reigning.

**REV. FRANK CRANE**—We have conquered Germany on the battle field. We must conquer her on the spiritual field.

**SECRETARY DANIELS**—The Monroe Doctrine will always abide as our pillar of cloud by day and our pillar of fire by night.

**PREMIER LLOYD GEORGE**—I wish to make it clear beyond all doubt that I stand for the abolition of conscript armies in all lands.

**CHARLES M. SCHWAB**—The aristocrat of the future will become so, not because of birth or wealth, but because he has done something for the good of his country.

**QUEEN MARY**—I earnestly trust that tho the thrill and glamour of war are over, the spirit of self-sacrifice and helpfulness it has kindled will not waver in the coming days.

**PREMIER CLEMENCEAU**—Many times have I felt life not worth living, but since young girls from Alsace-Lorraine in the exuberance of their joy kissed me saying "Savior," my journey of life is finished.

met one who claimed to know everything. Then the disgraceful person retorted, "Oh, that's so, isn't it? Well, I can tell you something you don't know, and it will interest you. My wife is your washerwoman, and I'm wearing one of your shirts," and that certainly added to the stock of the professor's information.—*London Opinion.*

On one trip the "Leviathan" made, a unit of negro soldiers was on board. One morning, shortly after first call, two of the negroes were standing wishing for excitement.

"Henry," said a comrade, "I wish a submarine would come along 'til this gun would talk to it."

Just then a floating object was discerned on the stern quarter. Without delay the gun went into action. After the soldiers had recovered their wits one said to the other:

"Henry, that's what I call service."—*New York Evening Sun.*

## THE NEW PLAYS

Florence Reed achieves some highly dramatic and emotional moments in *Roads of Destiny*, a play of fatalism, cleverly presented and well acted. (Republic Theater.)

*The Gondoliers* is one of the least known of the Gilbert and Sullivan operas, but is now peculiarly appropriate since in the "Kingdom of Barataria" all men are equal and kings have to do the dusting. (Park Theater.)

## POETS OF TODAY

Wilfrid Wilson Gibson, Private 381907 in the British army, is one of the half dozen young poets whose interpretation of the war has achieved greatness. These recent poems of his, "Kings" and "The Traitor," were published first in England in *The New Witness*. Many of his poems of battle have appeared first in *The Independent*.

### KINGS

He held a penny in his hand,  
And looked at it this way and that.  
"I'm big and red and round," he said,  
"While he is little, cold and flat."

"I've serfs and vassals, gold and land,  
The penny-king, he hasn't any;  
Yet when I'm dead and dust," he said,  
"He'll still be worth a penny."

### THE TRAITOR

"One moment till I've smoked this cigaret,"  
He said—his back against the barrack wall.  
With folded arms and still eyes strangely set,  
He puffed it slowly in the sight of all.

Their hands upon their rifle stocks, they saw  
The glowing tip and the gray smoke ascend;  
And as he flicked the ash away with awe  
They looked on him who once had been their friend.

His eyes gleamed dark above the cigaret  
Till absently he flung the stump aside,  
But if with fear, defiance or regret,  
They never knew who watched him as he died.

A young American poet, Roy Helton, has striven for "the human note" in everyday affairs in *Outcasts in Beulah Land*, published by Henry Holt & Co. "Glimpses" is perhaps the best poem in the book:

### GLIMPSES

Last night, as thru the crowd on Market Street  
A new-made soldier proudly swung along,  
Guiding that gray-eyed wonder called his girl,  
Whose face turned up to him in silent song,

I marked, above those gay young hearts atone,  
The unimportant beauty of the moon.

## DEMOCRACY MUST BE CIVILIZED

**W**HILE the Peace Conference tries to make the world safe for democracy and the teachers of two hemispheres try to make democracy safe for the world, democracy will do well to lift a finger in its own behalf.

Democracy is on trial. It will be on trial, if it lives that long, for generations to come. A reasonably successful democracy on a large scale is one of the newest things in the world. Its biggest experiment is the United States, a comparatively young nation. The downfall of the monarchs has been swift and spectacular, but when we remember that the greater part of mankind has been ruled by monarchs for more than four thousand years, we well may hesitate to prophesy that democracy is here to stay and that the monarchs will not come back. If democracy is to survive it must have "survival value" in the struggle for existence: and this means that it must be more than an ideal or a thing desirable.

To hold its own in the struggle for existence, democracy must be workable, and this means, first, that it must not be so much clumsier and so much more wasteful of energy than monarchy is that the world will get tired of its ineptitude and bungling; and second, that the citizens of the great democracies must be capable of running the democratic machinery.

Just now we Americans are taking a proper pride in the achievements of the people and the Government of the United States as participants in the European war. We have demonstrated our ability to get together and to create a gigantic enginery of organization and drive. What we do not yet know is the ratio of achievement to necessary cost. Our expenditures have been lavish beyond any known precedent, and when the day comes for analyzing them we should be prepared for a good deal of humiliation and, perhaps, condemnation. Mr. Lloyd George has called attention to the astonishingly small cost to Germany of the total output of German military preparation and military activity. So far as the data at present available enable us to judge, we anticipate that when the balance sheet is made up it will be found that the Entente Allies and the United States paid from two to five dollars for every unit of actual military achievement for which Germany paid a dollar. In a word, it is probable that the defeat of the Teutonic Powers cost anywhere from two to five times as much as it ought to have cost if all activities had been directed with an economy of plan and execution, comparable to that of Berlin.

We are not claiming that democracy cannot hope to succeed unless it is as efficient, dollar for dollar, as monarchy has been. The efficiency of individuals, man for man, may so far exceed the efficiency of individuals under monarchy

as greatly to outweigh the superior financial efficiency of monarchical government. Nevertheless, unless democracy can become efficient in the economic sense it cannot be regarded as securely established.

The other question, whether the citizens of the great democracies will prove themselves able to run the complex mechanism of a big democracy, is more serious. In the United States we have developed individual resourcefulness, initiative and responsibility; but it would be rash to say that our democratic political system has been the chief cause of the worthy achievement. We have had a new continent to explore and to exploit. To men of daring it has offered great opportunities. Practically the entire people have felt the touch of the spirit of adventure. We have had an abundance of cheap land, and for more than half of our history a majority of our people were land-owning farmers, depending upon themselves and not upon Government or even upon social institutions, for success. What assurance have we that we shall continue to be in like manner individually self-reliant and efficient when the majority of us are employees of the Government, or of municipalities, or of corporations, or are members of mass-governing profession or professorial guilds?

Again, as a people we have been on the whole a picked lot. We are all immigrants or descendants of immigrants, and until recently most of the men and women who came to these shores from Europe came under their own steam, so to speak, and for their own excellent reasons. They weren't sent; they weren't induced or brought. Now, however, we are beginning to show the normal composition of a long-established population. We have the usual percentages of failures and worse: defectives, the feeble-minded, paupers and criminals; and as yet we have devised no means of keeping these classes out of politics. We have devised no means either of giving due weight to intellectual and moral qualities in political leadership, legislation and civic life; and until that is done we can have no assurance that democracy will certainly prove more successful than monarchy has been in a world which no longer has any great continent of unexploited opportunity to select and stimulate such population elements as came to America from 1600 to 1860.

A democracy may be a civilized democracy, as the democracies of the United States, Canada, Great Britain, France and Switzerland on the whole have been; or it can be an uncivilized democracy as the democracy of Russia on the whole has been to date, as the democracy of Paris was in the days of the Commune, and as the democracies of New York City, Philadelphia and San Francisco often have been for years together. If democracy is to survive, it must succeed; and if it is to succeed, it must be civilized.

## COMMON SENSE IN DEMOBILIZATION

**A**RE we to have a common sense program of demobilization or shall the problem be taken in hand by the doctrinaires or by the red tape artists or, worse yet, be thrown as a bone to the Kilkenny cats of the industrial interests?

It is reported from Washington that the War Labor Policies Board requests the War Department to hold indefinitely in camp the enlisted men that have never been sent abroad. There are more than a million and a half of these in the various camps and cantonments, and the Labor Policies Board is said to fear the possibility of disturbing existing wage conditions thru an immediate release of soldiers, thereby creating a "surplus of labor."

There is no surplus of labor in the United States today or anywhere else in the civilized world, and, as might have been expected, the Department of Labor, which is thoroly informed on the subject, declares that its reports from the country at large show the seriousness of the actual labor shortage. No one will dispute the possibility of unemployment in certain centers where munitions workers are being discharged, but the problem which this state of facts presents is one of distribution and is not to be met by keeping a million and a half of men in idleness.

The obviously sensible thing to do is to ascertain what men in each camp and cantonment have jobs awaiting them or know how to get them and are clamoring for release. These men should be discharged at once. Men who do not know what to turn to, or whose plans are vague, should be held temporarily, while intelligent efforts are made to find opportunities for them.

These efforts cannot be made wisely or successfully by a central board, or commission, at Washington. They can be worked out only thru the coöperation of local agencies in every commonwealth. If we are correctly informed upon the views of the National Council of Defense and rightly understand its plans, it proposes that local councils or community centers, hundreds in number in each state, shall take this matter in hand, obtaining the coöperation of boards of trade, churches and influential citizens. This is the common sense procedure; and we anticipate that the pressure of public opinion, backed by the desire of families to get their boys home, will be adequate to bring something of the kind to pass.

## VIENNA AND PARIS

**A**T the Congress of Vienna that met a century ago after the fall of Napoleon, the outstanding personalities who parceled out the peoples of Europe among themselves were no less exalted dignitaries than Emperor Alexander of Russia, King Frederick William of Prussia, Count Metternich of Austria, Lord Castlereagh of England, and Prince Talleyrand of France.

At the forthcoming Paris Peace Conference to inaugurate a League of Free Nations on earth and thus to make the world safe for democracy the men who loom largest are the three plebeians, Petty Attorney Lloyd George, Editor Clemenceau and Professor Wilson!

## NO MAN'S LAND IS SOMEBODY'S

**I**N our issue of April 20 last we called attention to the fact that the only unappropriated and uninhabited territory of the world outside the Polar regions was Spitsbergen and that the Germans were after that. But as has happened before in Africa, Asia and the Pacific the British beat them to it. Last summer an expedition was sent out under Sir Ernest Shackleton, the Antarctic explorer, and the British flag was hoisted at Ebeltoft Harbor. A German wireless station was found here and destroyed.

The British have the best claim to the country both his-

torically and commercially. It was in fact annexed by Great Britain three hundred years ago under the name of "King James his Newland" and British companies have the largest holdings there. One syndicate, the Northern Exploration Company, has acquired some two thousand square miles of mineral land. There are said to be millions of tons of anthracite and bituminous coal in sight and easily accessible from the sea. The coal can be shoveled from the surface seams and run down to the shore by a cable line at cost of less than seventy-five cents a ton. Close by are mountains of iron ore, hematite of the richest sort, also available by open diggings. As may be seen from the map in the Story of the Week the islands are within 1200 miles of London, three or four days' voyage, and within 600 miles of the Murman coast, from which the Allied and American troops are now operating in Russia. During the war this was the only route out of reach of the U-boats and thousands of tons of coal were shipped from Spitsbergen to Norway and Sweden. Last winter the Scandinavian and Russian miners brought their families and stayed thru the dark half of the year, so now Spitsbergen has a permanent population and eight or ten natives.

## HISTORY REPEATING HERSELF

**W**E do not need to write new poems on the European situation. The old ones will do; for instance, Addison's on "The Campaign" of the Duke of Marlborough, written in 1704:

The British Chief, for mighty toils renown'd,  
Increased in titles, and with conquests crown'd,  
To Belgian coasts his tedious march renews  
And the long windings of the Rhine pursues,  
Clearing its borders from usurping foes  
And blest by rescued nations as he goes

## THE BREST MYSTERY

**B**REST was that "unknown port" to which a million or more of our boys were consigned and Brest was the source of the greatest hoax or the worst break or the strangest freak in the history of journalism. Which it was cannot yet be said, for the origin of the Brest despatch that set us all to celebrating peace prematurely has never been quite cleared up. There are several queer things about it. First the public learned on November 5 by official despatch from Berlin that the German Government had appointed a delegation to go to the front and receive from Foch the terms of the armistice. The names of the delegates were given: Rear Admiral von Hintze, the Kaiser's naval diplomatist and the Foreign Secretary; Admiral von Müller, chief of the Kaiser's naval cabinet since 1906; General von Winterfeld, former military attaché at Paris; and General E. G. W. T. von Gündell, military delegate to the second Hague Conference and chief of staff on the Chinese expedition of 1900; all well known men, just the sort the Kaiser would choose. They left for the front on the five o'clock train on November 6, according to the official despatch of the Berlin Government. They might have got there the next morning, spent several hours discussing the armistice and signed it in the afternoon. That in fact was what we heard from the United Press correspondent at Brest, who says he got it from Admiral Wilson, who says he got it from the American Embassy at Paris. So the shipyard men left their work at a loss to the Government of \$600,000 and the rest of us spent the evening blowing horns and waving flags at a loss to the country that cannot be computed.

Afterward we were told that it was all wrong; that a different delegation signed a different document on a different day. The armistice bears the signatures of Dr. Eaberger, Count von Salow and General von Winterfeld; two admirals and one general had disappeared and two civilians substituted. Only Winterfeld remained the same. The

armistice which President Wilson read to Congress November 11 was not that signed by these delegates. Eighteen of its thirty-five clauses were different. And it was signed on the 11th instead of on the 7th.

These are some of the things that puzzle the newspaper reader. Possibly a clue to them may be found in the fact—if it be a fact—that the Kaiser abdicated between these two dates.

## THE PORTUGUESE PROBLEM

THE trouble with a revolution is that once it is started it keeps on revolving. Kerensky and Ebert have discovered this, as did Mirabeau and Danton in their time. So, too, in Portugal. Since 1910, when King Manoel set sail in his yacht for British soil, the Portuguese republic has had seven presidents and innumerable changes of ministry. The monarchists have never ceased to intrigue for a restoration and at the other extreme syndicalists and anarchists have continued to create disturbances. At times these antipodal elements have conspired together, or at least played into each other's hands, in the effort to overthrow the Government. Between were the great body of republicans and democrats but split up into cliques and factions by personal rivalries and divergent aims. Toleration and respect for one another's rights—which are the pillars of a republic—are unknown in Portugal, and whichever party has been in power it has been accused—not without reason—of interfering with civil and religious liberty.

President Paes, who has just been assassinated, gained his power thru a bloody *coup d'état* on December 5, 1917. Like most of the republican leaders he was a professor in the secular university of Coimbra. He became Minister of Public Works under the republic and was serving as Minister to Germany when the war broke out. Altho Portugal from her ancient alliance with Great Britain was nominally among the Allies from the start and Portuguese troops were actually coöperating with the British, French and Belgians in fighting the Germans in Africa, yet Paes remained in Berlin until 1916, when Germany declared war against Portugal on account of the seizure of her ships. Then he returned and entered the army as a major of artillery. But he used his position to foment a conspiracy against President Machado, whose commission he held.

Machado was pronouncedly pro-Ally. As Prime Minister he had declared as early as September 7, 1914, that Portugal would fulfil her treaty obligations and support Great Britain. When he became President a year later he began preparations for active participation. He proposed to appropriate \$80,000,000 and raise an army of 150,000 men, not a poor contribution for a country inferior to Ohio in area, population and wealth.

But while President Machado with Premier Costa were on a visit of inspection to the French front, Major Paes took advantage of their absence to depose them. After three days of fighting in the Lisbon streets where some eighty persons were killed and four hundred wounded, Paes was put in power and an election held in the spring gave him a specious appearance of popular support by a large majority of the votes cast. The London *Times* in an editorial favorable to Paes described his following in these words:

Among his supporters are the Army, the Church, the numerous Republicans who were bitterly disaffected with the late régime, and the Monarchists. A revolution brought him to power last December, and it has been followed in the intervening six months by many arbitrary and "unconstitutional" measures. The President is practically a dictator, and the elections which returned the Congress he opened last week were held under a dictatorship.

The clericals had been alienated by the republican administration because of its harsh measures in disestablishing the Catholic Church and confiscating ecclesiastical property. Most of the clergy in Portugal, as in France, refused to conform to the separation law. President Paes conciliated the clerical element by relieving the Catholics of some of

their hardships and by resuming diplomatic relations with the Vatican.

Paes on his accession was suspected of being pro-German, but he repudiated the imputation and a contingent of Portuguese troops were put in charge of a sector near Arras. They have been criticized for giving way before the German onslaught in the spring but, as Haig explains, they "were called upon to withstand the assault of greatly superior forces."

The royalists remain unreconciled to the republic. The national song is still hissed in certain restaurants. On the occasion of the marriage of ex-King Manoel they tried to telegraph congratulations, but these were held up by the authorities. So also was the wedding present inscribed "From the City of Lisbon to Its King." The royalists, indignant at this interference, issued a protest, after the Portuguese custom, in the form of bombs.

The republicans have never liked it that Great Britain has granted hospitality to the exiled King and the anti-British feeling was increased, at the instigation of German agents, when the publication of the secret memorandum of Prince Lichnowsky disclosed that Great Britain was trying before the war to gain the good will of Germany by liberal concessions in the Portuguese possessions of Africa. Dom Manoel used his influence in support of the war party, but many of the monarchists were pro-German.

Such are some of the factors in the Portuguese problem. The assassination of the President will of course make matters worse. He was doubtless shot because he was considered reactionary, but the crime will, as usual, tend to strengthen the reactionary forces. Labor leaders and republicans are being arrested for complicity. Among them is Senhor Brito Camacho, leader of the Unionist Republicans, who in his paper *Lucia* has voiced the sentiments of the laboring classes that they had no concern in the war. It is not yet clear, however, what are the real forces behind this ill-advised manifestation of violent partizanship.

## WE WANT TO SEE

WE have sent to Europe our foremost citizen, the one American above all others the peoples of the Old World would most wish to welcome.

Why not an exchange of visits? Let England send us Premier Lloyd George, France Marshal Foch, Italy aviator-poet D'Annunzio, Belgium Cardinal Mercier, Greece Premier Venezelos and Japan "Grand-old-man" Okuma. They are the men of their respective countries that America would most delight to honor.

## OUR SEVENTIETH BIRTHDAY

ONCE in five years we take the privilege of talking about ourselves, not, we hope, with the garrulosity of old age or with the boastfulness of youth, but in order that the new friends of The Independent may know why its old friends have loved it. For any journal, unless it be one of these ephemerides which flash before us on the newsstand and vanish as quickly, has a life and character of its own. It has a consciousness of past achievements that supports it in the crises of the present. It forms an inseparable part of that national life with which it has grown up and helped in some degree to shape.

The Independent took its name from that group of brave Englishmen who in the seventeenth century revolted against the tyranny of church and state, and, driven out of their native land as criminals, sought freedom in New England. The system of government established by the Independents, or Congregationalists as they came to be called, was adopted by the States and by other nations, and their principles of civil and religious liberty have spread around the world.

The Independent has tried to live up to the ideal of the noble name that stood at the head of its pages. It has never

been the organ of any sect, party, society, publishing house or commercial interest. It has always expressed its opinion with freedom—sometimes even with violence—on the burning questions of the day. It has been an active combatant in the hottest conflicts in politics, religion, business, literature, science and art. It has thrived on the championship of unpopular causes. And the freedom of speech that it has claimed for itself it has accorded to others. It has opened its own columns to its strongest opponents and endeavored to present both sides of all controverted questions to the consideration of its readers. The Independent has always welcomed new forms of art, new forms of poetry, new forms of spelling, and it has always attacked anachronisms, superstitions, meaningless survivals in church, state, society and language.

The Independent was born in 1848, the great year of liberation, when thrones were shaking and kings were fleeing and peoples rising as never before since 1793 and never afterward till now. It espoused from the start the most abhorred movement of the day, abolitionism. The dominant forces in state, church, society and finance conspired to crush or silence this new and aggressive enemy of entrenched privilege, but it persisted, and probably there was not a number of the first 770 weeks when slavery was not attacked in some way. After the formal emancipation of the negro there was—and unfortunately still is—need to fight for his equal civil, political and industrial rights.

As a natural sequence The Independent has championed other oppressed nationalities the world over: Greeks, Armenians, Indians, Hungarians, Jews, Finns, and many others. It has always advocated the expansion of American territory and the expansion of American ideals. Nothing therefore could please us better than the prospect of world organization and reconstruction on American principles and system. The present editor of The Independent was one of the founders of the League to Enforce Peace and the League of Free Nations, and he has neglected no opportunity to advocate these ideas by pen and voice.

The Independent having been founded for the purpose of obtaining just and equal treatment for all persons irrespective of race, sex, religion or wealth, and for seventy years it labored unceasingly for the abolition of those restrictions and discrimination that law and custom have imposed upon the weaker sex: 1. Educational. When The Independent was started there was scarcely a college open to women. Now most of the colleges and universities admit them. 2. Professional. The fierce and intolerant opposition against the admission of women to medicine, law, ministry, teaching, engineering, and other professions and occupations can hardly be realized by the present generation. Now practically all avenues are open and women are daily proving their competency in new kinds of employment. 3. Equal pay. The right to equal recompense for equal services would seem naturally to follow, but is not yet fully acknowledged. 4. Property rights. The existence of women as independent personalities is now recognized by the law, and in most of the states the sexes have been virtually placed upon an equal basis. 5. Marital rights. The Independent has always regarded marriage as an equal partnership, and has urged that women ought not to be penalized for marrying by the forfeiture of the rights of property or occupation. This view, once so heretical, is coming to prevail. 6. Electoral rights. The right to vote has always seemed to The Independent a logical deduction of democracy. This fight is now virtually won, for women have now the ballot in the British Empire, Russia, Germany and Scandinavia, and in the greater part of the United States. 7. The right to be womanly. While The Independent has favored the admission of women to the educational, political and vocational privileges formerly monopolized by men, it has always opposed the idea that women embracing these opportunities should necessarily imitate men in dress, manners, opin-

ions, or morals. Women should be allowed to do things in their own way. A certain mannishness is excusable in the pioneers who had to force their way thru closed doors, but this unpleasant phase of the feminist movement is fortunately a passing one.

The Independent has been a leader in the movement for church federation and other measures to secure greater amity and coöperation between denominations. But it has never favored the obliteration of denominational differences by compulsory uniformity. The same principle should be applied here as to political reconstruction where we would have many diverse nations joined in one world federation.

One respect in which the old Independent departed from the custom of the literary and religious journals of its time was in devoting considerable space to the industrial side of life. It established standing departments of Finance, Commerce, and Insurance when such subjects were regarded as too sordid to be discussed in polite periodicals. This tendency has in recent years led The Independent to become the exponent of the efficiency movement in business and in various plans for the economy of time, money and energy by individuals. Naturally also the labor movement at home and abroad has come to receive an increasing amount of attention in our columns. We stand for the coöperative development of business up to and only up to the point where it involves the selfish exploitation and oppression of business rivals, of wage workers, or of the consuming public. We shall labor for the democracy of industry, thru which the workers shall come more and more into ownership of the tools with which they produce, and capital and labor shall become more and more partners in industry rather than rivals for a disproportionate share of the products of industry.

Every institution, says Emerson, is but the lengthened shadow of a great man. We cannot close a historical sketch, however brief, without reference to the three grand old men to whom The Independent owes its existence, influence and prosperity. The first was Henry C. Bowen, the founder and for fifty-two years the publisher and proprietor of The Independent. The second was Dr. William Hayes Ward, who for forty-eight years was on its editorial staff, for the greater part of that time its editor-in-chief. The third was William B. Howland, who as publisher effected in the brief period of 1913-1917 a radical reconstruction of The Independent and greatly extended the radius of its influence.

In 1917 The Independent found a fitting mate in *Harper's Weekly*, nine years its junior, and the married magazines have been received with greater favor than either when it was single. *Harper's Weekly* in 1857 boldly proclaimed itself "A Journal of Civilization" and worthily lived up to its title. It was the first American weekly to illustrate current events with full page and double page woodcuts, involving toil and expense hard for us now to imagine, and its pictorial history of the Civil War sells at a high premium. The volumes of The Independent for the last four years give, thru the newer photographic processes, a more accurate and complete record of the Great War.

So tracing the curve of The Independent's progress in the past, the course of its trajectory in the future may be drawn with some confidence. But we prefer to leave such forecasting to the reader, for it might seem presumptuous to do it ourselves. We will only express the confidence that The Independent may continue to deserve the name which has been given it by those who know it best of "The Forward Looking Weekly." The victorious ending of the Great War opens out a period of world-wide reconstruction and internal reorganization in which the principles that The Independent has stood for will find an opportunity for application such as we had hardly hoped to see. It is to this task that we dedicate our efforts and invite the coöperation of our readers in this, the First Year of the Great Peace.

# THE STORY OF THE WEEK

**The President in Paris** The "George Washington," bringing the President and his party with the corps of consulting experts to the Paris conference, steamed into the harbor of Brest on December 13. The vessel was preceded by the battleships "Pennsylvania," the flagship of Admiral Mayo, and "Wyoming," the flagship of Vice-Admiral Sims, and was escorted by the battleships "Arkansas," "Florida," "Utah," "Nevada," "Texas," "New York" and "Arizona." As the President landed at 3:15 p. m. he was greeted by Stephen Pichon, the French Foreign Minister, and Georges Leygues, Minister of Marine, and the local municipal authorities. He then took train for Paris, where he arrived at ten the next morning.

In all the long history of Paris no visiting sovereign or national hero has received such a welcome as was accorded to President Wilson on his arrival December 14. Two million people assembled to see him pass thru the streets, and all classes manifested equal enthusiasm. As *Le Temps*, the governmental organ, puts it:

In the eyes of the immense crowds welcoming him President Wilson represents two invincible forces, the material force which permitted the war to be won and also the force which will sanctify peace.

The Paris boulevards are lined with German cannon, but these were hidden under heaps of humanity. The great statue of Strasbourg in the Place de la Concorde, which ever since 1871 had been draped in mourning, was now covered with people, and on top of the head stood a man waving an American flag. The carriage containing Mrs. Wilson and Mme. Poincaré was filled with flowers thrown by the spectators.

At a state luncheon given by President Poincaré at the Elysée Palace and attended by two hundred guests Mr. Wilson had an opportunity of meeting the leading men of France. The following day, being Sunday, he attended the American Presbyterian Church in the morning and the American Episcopal Church in the afternoon. He also visited the Picpus Cemetery to place a wreath upon the tomb of Lafayette. On Monday he was received by the Préfet of the Seine and the president of the Municipal Council, who presented him with the grand gold medal of the city of Paris and conferred upon him the municipal citizenship. Mrs. Wilson was given a diamond brooch in the form of a dove.

Such official functions have been, however, reduced to a minimum, and the President is devoting most of his time to personal conferences with Premier Clemenceau and other French officials and with the representatives of the Allied Powers and minor nationalities. In these he has made a very fa-

## THE GREAT WAR

**December 12**—Armistice extended. French occupy Odessa in place of Germans.

**December 13**—President Wilson arrives at Brest. Political strikes in Germany.

**December 14**—President Paes of Portugal assassinated. President Wilson reaches Paris. First British parliamentary elections since 1910.

**December 15**—President Mannerheim of Finland leaves England for Helsingfors. American troops cross Rhine and occupy semicircle of fifteen miles radius from Coblenz.

**December 16**—President Wilson made a citizen of Paris. German Congress of Soviet refuses admission to Liebknecht.

**December 17**—"Leviathan" (formerly "Vaterland") brings 8870 soldiers from France. Jugoslavs protest against Italian occupation of Fiume.

**December 18**—American warship joins British fleet in Baltic. Rumanian troops enter Hungary.

avorable impression by his frankness and thoro comprehension of the European standpoint.

## The President's Speeches

The first utterances of President Wilson were awaited with intense eagerness not unmixt with apprehension, for it had been rumored in certain quarters that he would not fully sympathize with the French in their desire to exact reparation from Germany. But the President removed this apprehension by laying special emphasis upon the ruin of the war in his toast at the luncheon given by

President Poincaré, and at his reception by the municipal authorities at the Hotel de Ville. In response to the toast of M. Poincaré he said in part:

From the first, the thought of the people of the United States turned toward something more than the mere winning of this war. It turned to the establishment of eternal principles of right and justice. It realized that merely to win the war was not enough; that it must be won in such a way and the question raised by it settled in such a way as to insure the future peace of the world and lay the foundations for the freedom and happiness of its many peoples and nations.

Never before has war worn so terrible a visage or exhibited more grossly the debasing influence of illicit ambitions. I am sure that I shall look upon the ruin wrought by the armies of the Central Empires with the same repulsion and deep indignation that they stir in the hearts of the men of France and Belgium, and I appreciate, as you do, sir, the necessity of such action in the final settlement of the issues of the war as will not only rebuke such acts of terror and spoliation, but make men everywhere aware that they cannot be ventured upon without the certainty of just punishment.

I know with what ardor and enthusiasm the soldiers and sailors of the United States have given the best that was in them to this war of redemption. They have expressed the true spirit of America. They believe their ideals to be acceptable to free peoples everywhere, and are rejoiced to have played the part they have played in giving reality to those ideals in coöperation with the armies of the Allies. We are proud of the part they have played, and we are happy that they should have been associated with such comrades in a common cause.

It is with peculiar feeling, Mr. President, that I find myself in France joining with you in rejoicing over the victory that has been won. The ties that bind France and the United States are peculiarly close. I do not know in what other comradeship we could have fought with more zest or enthusiasm. It will daily be a matter of pleasure with me to be brought into consultation with the statesmen of France and her allies in concerting the measures by which we may secure permanence for these happy relations of friendship and coöperation, and secure for the world at large such safety and freedom in its life as can be secured only by the constant association and coöperation of friends.

In his address to a delegation of French Socialists he said:

It is not possible to secure the happiness and prosperity of the world, to establish an enduring peace, unless the repetition of such wrongs is rendered impossible. This has indeed been a peoples' war. It has been waged against absolutism and militarism, and these enemies of liberty must from this time forth be shut out from the possibility of working their cruel will upon mankind.

In my judgment, it is not sufficient to establish this principle. It is necessary that it should be supported by a coöperation of the nations which shall be based upon fixed and definite covenants, and which shall be made certain of effective action thru the instrumentality of a League of Nations. I believe this to be the conviction of all thoughtful and liberal men.

**Armistice Extended** The armistice with Germany that was signed on November 11 was to last for thirty days with the option of being extended. At the end of that period the armistice was continued to Janu-

BRITAIN'S LATEST ACQUISITION

In September the British flag was raised over the Spitsbergen islands, a territory larger than Maryland and rich in coal, iron and other minerals. The Russian claims to Spitsbergen were assigned to Germany by the treaty of Brest-Litovsk and the Germans tried to get access to it thru Finland to the Varanger Fjord or Katerina Harbor, but they were frustrated by the landing of Allied and American troops on the Mureman coast. The strategic significance of Spitsbergen is obvious from the map. Its commercial importance is discussed in our editorial columns.

THE PARTITION OF AUSTRIA-HUNGARY

In this map the heavy black lines are the old boundaries of Austria and Hungary. The dotted lines show the proposed division into new nations. The Serbs wish to include the Montenegrins and those of their race to the northwest to form Yugoslavia. The Italians dispute with them the Adriatic coast. The Bohemians of Austria have joined with the Slovaks of Hungary to form Czechoslovakia. The Poles are fighting with the Ruthenians over Austrian Galicia. Rumania has annexed that part of Hungary chiefly inhabited by Rumanians. There is only left the lands inhabited by the Germans and Magyars.

ary 17 at 5 a. m. The Allies insisted upon the following additional safeguard:

The Supreme Command of the Allies reserves the right, should it consider this advisable and in order to obtain fresh guarantees, to occupy the neutral zone on the right bank of the Rhine north of the Cologne bridgehead and as far as the Dutch frontier. Notice of this occupation will be given six days previously.

If the Allied forces take advantage of this new privilege and occupy the ten kilometer strip east of the Rhine from Cologne to the Dutch frontier, it will put them in possession of the important coal and iron centers of Düsseldorf, Duisberg and Mulheim, and bring them within six miles of the great Krupp steel works at Essen.

The proposed extension of the area of occupation seems to have been instigated by the manufacturers of the Düsseldorf district, who are said to have held a meeting at Dortmund and voted to ask the Allies to extend their control over the industrial district on the right bank of the Rhine until order was restored. The leader of the movement was August Thyssen, the "Iron King of Germany," and he with six other captains of industry have been arrested in consequence by the Socialist Council of Mulheim-am-Ruhr and sent to Berlin.

#### Bolshevism in Germany

The Russian Bolsheviks differ from revolutionaries in general in being abundantly supplied with funds. Lenin and Trotzky do not draw high salaries, but they are multimillionaires as regards spending money. By becoming the supreme power in Russia they not only took over the Government funds, hundreds of millions of dollars in gold, but they have also seized jewels

and treasures of incalculable value in the palaces and churches all over the country. The banks of Russia have been commandeered, and what is more, their printing presses are turning out paper currency in unlimited amounts.

The possession of so much capital explains in large part the surprising stability and power of the Bolshevik regime. It further explains the extent of the propaganda which they are carrying on abroad. Their object, as they have always plainly declared, is to promote a world-wide revolution of their own sort. With this aim they have maintained agencies in Switzerland and Sweden and circulated their literature surreptitiously in all countries. It is even suspected that some of their money has reached America. The Swiss Government has finally closed up the Bolshevik headquarters in Geneva and expelled its representatives.

Shortly before the German revolution the Imperial Government discovered that Joffe, the Russian Ambassador at Berlin, was using his office as a center of Bolshevik propaganda, altho such activities are expressly prohibited by the Brest-Litovsk treaty, of which he was one of the signatories. Joffe was expelled from Germany, but he came back when the German revolution broke out and resumed business at the old stand. But the Socialist Government was as anxious to prevent the spread of Bolshevism as the Imperial Government, so Joffe was again sent back. But in taking the train for Russia one of his secretaries overlooked a package containing twenty-one receipted bills for arms and ammunition to the amount of \$27,250 for the Spartacus party headed by Liebknecht. This, as Joffe frankly

declares, is a very small part of what he has so spent. It is said to amount to a million dollars in gold. The Berlin soviet sent an invitation to Joffe to return, but the Ebert Government stopped him at the frontier and compelled the soviet to rescind its invitation.

Besides the arms purchased by the Spartacides the Bolshevik funds the Spartacus revolutionists have secured others by raiding the munition factories of Berlin. The return of the soldiers to the capital has strengthened the Socialists of the Ebert and Scheidemann faction who are now in power. The Spartacides are highly indignant that Hindenburg and the army generally support the Government of their opponents. Their organ, *Die rote Fahne* (Red Flag), demands the punishment of Hindenburg,

that sentimental mass murderer, that man who is responsible for hundreds of thousands of German families losing their loved ones, that man but for whom the war would long have been over, that man who changed Belgium from a flourishing country to a heap of ruins, and who for four years ordered his troops to murder, burn and destroy while he gradually reduced the homeland to starvation.

The Red Flag is equally denunciatory of President Wilson for his alleged intention to make the admission of food into Germany conditional on the maintenance of order and a democratic government. It says:

This is treachery against the revolution. Any attempt to send food to Germany must be opposed as a capitalistic effort to beat Bolshevik aims.

Where elections have been held the Socialists of the Government party have appeared in majority, so Liebknecht's followers have resorted to strikes as the only way to prevent the holding of a constituent assembly.

When the Central Congress of Delegates from the Soldiers' and Work-

men's Councils (soviets) of Germany convened in the Prussian Diet chamber at Berlin on December 16 there were very few representatives of the Spartacus group. They made an effort to have Dr. Karl Liebknecht and Rosa Luxemburg, the dominant figures in the Spartacus movement, invited to address the congress, but this resolution was voted down five to one. Liebknecht later appeared with seven thousand of his followers from the Berlin factories. He was not admitted to the chamber, but got into the building and made a speech from an upper window.

**The British Elections** The result of the parliamentary elections will not be known for two weeks, because all the soldier and proxy votes must be in before the poll is counted. It is regarded as certain that the coalition cabinet of Lloyd George will be confirmed by a considerable majority in the next parliament, but apart from that all is guesswork owing to the fact that some six million women and two million men were voting for the first time. In 107 precincts there was no contest. For the remaining 599 seats there were 1497 candidates. Of these 358 ran as Coalition Conservatives and 113 as Coalition Liberals. Of those opposed to the present Coalition 271 were Asquith Liberals, 39 Conservatives, and 376 Laborites and various other factions.

In Ireland, it seems, the Sinn Fein swept the country outside Ulster. The Nationalists lost seats that they felt sure of. Even John Dillon, leader of the party, was defeated in East Mayo. All of the Sinn Fein representatives will refuse to take the seats to which they have been elected, but will set up an unauthorized parliament of their own and appeal to the Peace Conference to recognize Ireland as an independent republic.

The parliamentary franchise was granted to women over thirty who had the right to vote in local elections thru owning or leasing real estate or being married to a voter so qualified. The

women generally availed themselves of their new privileges. In fact in many places more women than men cast votes on election day, owing to the absence of men in army or other government service. In some districts in the poorer quarter of London there were ten women voters to every man.

**The New Poland** There seems to be something in national heredity. Poland is no sooner resurrected than it finds itself, like the old Commonwealth, at war with all its neighbors and torn by internal dissensions. The first act of the new government is to call for the mobilization of an army of 1,500,000 men. These will be needed if Poland is to secure by her own efforts all the lands to which she lays claim. The Poles have occupied the Kholm district, which the Ukrainians claim on the ground of nationality and which was assigned to them by the Brest-Litovsk treaty. They have taken possession of the whole of Austrian Galicia, altho the Ukrainians predominate in the eastern half. After the capture of Lemberg, the capital of Galicia, the Jewish ghetto was sacked and 1500 of the Jews and Ukrainians put in prison by the Poles. Posen in German Poland has been occupied, and the Baltic port of Danzig in West Prussia is also claimed, altho only about 5 per cent of its population is Polish. On the south the Polish claims come into conflict with the Czechs, on the east with the Russians, and on the north with the Letts and Lithuanians.

No country has suffered more than Poland in the war, for the Russian and the German and Austrian armies swept back and forth over the land for three years, each devastating it as it retired. The Belgians and Serbs could get outside aid, but the Poles could not. Their sufferings are not yet over, for the Bolsheviks are ravaging the eastern border as the German forces are evacuating the country. The Jews complain that the Yiddish newspapers and schools which the Germans allowed them to start have been suppressed and that the Poles are boycotting the Jews and murdering them. The Poles, on the

other hand, claim that the Jews are pro-German or pro-Russian or internationalists. Both the Poles and the Jews have appealed to the Allies and America to send a commission to investigate the alleged pogroms, and this has been agreed to.

The Provisional President of Poland is Josef Pilsudski, who, like his father before him, has devoted his life to the cause of Polish freedom. He was sent to Siberia before he was twenty for being implicated in an attempt to assassinate the Czar. On his return from exile he set up a clandestine press and smuggled in books from England. He was caught and imprisoned, but got out by feigning insanity. When Russia engaged in war with Japan Pilsudski went by way of the United States to get Japan to aid a Polish insurrection. At the outbreak of the present war he organized a Polish legion, which fought Russia in the Austrian army. But after peace was made with Russia he came into conflict with the German authorities in Poland and was imprisoned. He now occupies the magnificent apartments which the German Governor abandoned a month before. The German minister to Poland, Count Kessler, has been driven out of Warsaw.

**Assassination of Dr. Sidonio Paes, Portuguese President** Dr. Sidonio Paes, President of the Portuguese Republic, was shot in the railroad station of Lisbon at midnight December 14. As the President was waiting to take the train to Oporto a young man named Jeetne approached and fired three shots from his revolver. Dr. Paes fell into the arms of the ministers with whom he had been talking and died at the hospital to which he was hurried. The assassin was lynched by the crowd on the spot.

The act is alleged to be the outcome of a conspiracy on the part of radical republicans in which the League of Republican Youths and the labor unions are implicated. Many prominent men have been arrested on suspicion, among them Dr. Brito Camacho, leader of the Unionists, and Magalhaes Lima, leader of the Republican party.

## GERMANY'S FAMOUS "HAM AND TURNIPS" NOTE

When the town of Niederlahnstein issued this municipal note in 1917 it created a sensation in Germany by its alleged affront to the Imperial Government, and the Kaiser personally ordered it to be suppressed. An inscription over the picture of the ham read: "Tender longings and sweet hopes"; over the turnips was printed: "This is how we live in 1917"

#### OUT OF GERMAN PRISON CAMPS

American, British and French prisoners of war who were released from German prison camps and left to get back to Allied territory as best they could are shown here at the Gare du Nord in Paris, where they are being fed and taken care of

Dr. Paes was formerly professor of mathematics in the University of Coimbra and was Minister to Berlin at the outbreak of the war. He returned to Portugal in 1916, becoming a major of artillery, and in December of that year came into power thru a revolution.

**Iceland Independent** The Law of Confederation which went into effect on December 1 made a definite separation of the government of Iceland from that of Denmark. In 1280 Iceland and Norway were joined to Denmark, but Norway broke away from Denmark to join Sweden in 1814. The people of Iceland have long been restive under Danish rule, and in 1874 secured self-government. The new act declares that "Denmark and Iceland are free and sovereign states united by a common king."

The foreign affairs of Iceland will remain in the hands of Denmark. The citizens of each country will enjoy equal rights and privileges in the other, but be exempt from military service except to the home government. Denmark will discontinue the annual contribution of \$15,000. Iceland is about the size of Virginia, but its population is only 85,000.

#### The South American Crisis

The dispute between Peru and Chile, which caused the breaking off of diplomatic relations between the two countries a month ago, is still smouldering in spite of efforts made by the United States and by Argentina to bring it to a settlement by mediation. The trouble goes back to the Peruvian-Chilean war of 1879-1884, which spelled disaster for Peru and prosperity for Chile, and it is necessary to review the events then to understand the present situation.

Between Chile and Peru lies the desert waste of Atacama and Tarapaca, a rainless country which was thought useless until the last half of the nineteenth century, when it was discovered to be a treasure house of nitrate of soda. The Chileans were the first of the South Americans to realize its enormous value, and to begin the business of mining and exporting it.

Before the war of 1879-1884 the province of Tarapaca belonged to Peru, and the provinces of Arica and Tacna to Bolivia. All three are in the heart of the rich nitrate lands. For a consideration of \$10,000 the Bolivian Government granted to Chile certain concessions which enabled the Chilean companies to mine the nitrate in Arica and Tacna. Peru, meantime, began mining the nitrate in her own province of Tarapaca. But Chile had the lead and her success caused Peru and Bolivia to protect their interests by a defensive treaty and a tax on Chilean

exports of nitrate at the ports of Tacna and Arica. Chile protested and seized the Bolivian port of Antofagasta. Then Bolivia declared war in March, 1879, and a month later Peru joined her.

After four years Chile was victorious and dictated the Treaty of Ancon, which took outright the province of Tarapaca and for a ten-year occupation the provinces of Arica and Tacna. Thus Bolivia lost her seaports and Peru her nitrate. The Treaty of Ancon promised a popular vote to decide the ownership of Arica and Tacna at the end of the ten years, but Peru and Chile have never been able to agree as to the conditions of the vote. If every one is included in the vote the provinces will probably go to Peru; if only the educated classes are allowed to participate, Chile is likely to keep them.

President Wilson has pointed out to the governments of Chile and Peru

the duty which they owe to the rest of the world and to mankind in general, to take immediate steps to restrain popular agitation and to reestablish their peaceful relations.

It is rather generally suggested that German intrigue has been instrumental in causing the outbreak just now when a threatening war in South America would particularly embarrass the United States' participation in the Peace Conference. Chile has maintained an entirely neutral position thruout the war, while Peru definitely sided with the Allied cause after the United States became a belligerent.

**Who Is Going to Run the Railroads** Director - General McAdoo focussed the scattering discussions as to who shall run the railroads by an appeal to Congress on December 11 for a five-year period of government control—

to take the question out of politics, to give composure to railroad officers and employees, to admit of the preparation and carrying out of a comprehensive program of im-

The North American Review's War Weekly

WELL, HE KEPT US OUT OF WAR

provements of the railroads and their terminal facilities, to put back of the railroads the credit of the United States, and to offer the necessary opportunity under proper conditions to test the value of unified control.

The only alternative to this proposal, in the judgment of the Director-General, is an immediate return of the roads to private ownership under the old conditions of legal entanglement and confusing competition, since there is "neither time nor opportunity for remedial legislation now," and

it is impossible and hopeless for the Government to attempt the operation of the railroads for twenty-one months after peace under the present law. To attempt to continue Federal control under the inadequate provisions of the present Federal control act and for the very brief period it authorizes, would be to multiply our difficulties and invite failure.

The point that Mr. McAdoo stressed chiefly in his appeal was the value of a five-year period of government control of the railroads as an experiment in public ownership.

The American people have a right to this test. It is to their interest that it should be done. In my opinion, it is the only practicable and reasonable method of determining the right solution of this grave economic problem.

Congress, for the most part, seems unwilling to impale itself on either horn of the dilemma Mr. McAdoo suggests. Senator Johnson, of California, for instance, wants permanent control of the railroads taken by the Government at once. Senator Penrose, at the other extreme, thinks that anything would be better than the present "mismanagement." Democratic Leader Martin has definitely stated his opposition to Mr. McAdoo's plan and advised that the railroads be returned to their owners "after necessary legislation has been enacted."

It is interesting that the chief pressure upon Congress from the people is

brought by the shippers, who believe that with the railroads under private control they can force a reduction in freight rates of the 15 per cent increase put on by Mr. McAdoo to compensate for wage increases. Railroad employees, on the other hand, are generally in favor of government control, which would tend to keep up their present scale of wages.

Aside from discussion of Mr. McAdoo's proposal there is much criticism of his statement that

The President has given me permission to say that this conclusion accords with his own view of the matter.

President Wilson in his recent speech to Congress emphasized the fact that he himself had come to no conclusion on the future disposition of the railroads.

#### Shipping Released from War

Ships with aggregate carrying capacity of 800,000 tons have been designated to be turned over by the army quartermaster department to the Shipping Board for return to trade routes. Their release is an important factor in the readjustment that we are making for foreign trade under peacetime conditions. In New York alone more than 170,000 tons of export freight are tied up at the docks for lack of shipping facilities.

#### Aviation in Civil Life

With thousands of aero-planes and aviators released from military service many plans are being made to transfer them to the everyday usages of civilian life. The air mail service, first of all, is to be much extended. It has been for some months established between Washington and New York, Philadelphia and New York, and was recently begun between Chicago and New York. The United States Weather Bureau is publishing aerial weather

#### CHIEF OF OUR AIR MAIL SERVICE

Lieutenant J. Clark Edgerton, one of the original fliers in the air mail service, has been appointed chief of the postal flying operations, to succeed Captain Benjamin Lipsner. The air mail is under Postmaster General Burleson's jurisdiction

forecasts for all the territory between New York and Chicago.

It is expected that the first extension of the air service will be from New England to the Far South, and after that the coast-to-coast route may be opened. Not less than fifty aerial mail lines, with the employment of at least one thousand military aviators, will probably be incorporated in our postal service in the near future.

Captain Benjamin B. Lipsner, superintendent of the air mail service, sent his resignation to Postmaster General Burleson on December 6 with a protest against Second Assistant Postmaster General Praeger's announcement of plans for altering the service. He opposes particularly the plan to build special mail-carrying planes instead of utilizing military planes already built and the appointment of "novices in charge of important branches of the air mail service." Captain Lipsner also points to the fact that in a single month the few airplanes now in use made a total of 11,000 air miles with a perfectly clean record.

The Postmaster General accepted Captain Lipsner's resignation and appointed Lieutenant J. Clark Edgerton to succeed him. The specific protest which led to Captain Lipsner's resignation was met, however, by the House of Representatives, which added an amendment to the annual post office appropriation bill, requiring the Postmaster General to use army aviators for mail airplanes, instead of organizing a separate postal flying corps, and to accept for immediate use two hundred army airplanes to be transferred to the postal service by the War Department.

New York has introduced an Aviation Section into the city's Police Department for special duty in case of conflagration, riot and police operations on the bay and rivers where birds-eye observation is important.

#### ALL CARRIED OVER LONDON IN ONE AEROPLANE

These forty passengers, the largest number ever carried in one plane, flew over London recently in a Handley Page airplane, piloted by Clifford B. Prodger. Mr. Handley Page is the fourth man from the right in the second row; at the left is Mr. Prodger, the pilot

## Tangled Wires

Postmaster General Burleson, whose office now has come to include the directorship of all means of communication by mail, telephone, telegraph or cable, has kept his critics busy lately. His seizure of the cables brought a storm of protests, increased by later announcements of the consolidation of the Western Union and the Commercial Cable companies and of the Postal Telegraph and Western Union telegraph systems. The Postal Telegraph and the Commercial Cable companies, both under the direction of Clarence H. Mackay, objected that they were being unfairly discriminated against in favor of the Western Union. In the case of the Postal Telegraph the disagreement resulted in Mr. Burleson's discharging from Federal service Edward Reynolds, vice-president and general manager, and A. B. Richards, superintendent of the company's Pacific Coast division. The president of the Western Union, Newcomb Carlton, was appointed by Mr. Burleson as director of the combined cables, after George G. Ward, vice-president and general manager of the Commercial Cable, had refused to accept the position on the Postmaster General's terms. Mr. Ward, Clarence H. Mackay, president of the Postal Telegraph and Commercial Cables, and William W. Cook, counsel for the companies, were discharged forthwith from any connection with the operation or control of the combined cables. The Commercial Cable Company has brought suit on the ground that Postmaster General Burleson's seizure of the cables constitutes a violation of international law, since he is thus taking under his supervision the cable traffic of Canada, Australia and the British Isles.

The real difficulty behind the various disagreements seems to center in the Postmaster General's desire to bring the telegraph, cables and telephone under permanent government control. Chairman Moon, of the House Post Office Committee, introduced on December 13 a bill previously approved by President Wilson empowering Postmaster General Burleson to continue government control of the

telegraph, telephone and cable systems after the peace treaty is signed. Arguments for this measure are advanced by Theodore N. Vail, president of the American Telephone and Telegraph Company and now adviser to the Postmaster General, on the ground that it will save wasteful competition and consequently lower rates.

Postmaster General Burleson has made public his own reasons for asking permanent government control of the systems of communication so that they may be operated "solely with a view to serving the public, and not making profits or guaranteeing returns on the investment." He argues nevertheless that they can be made to pay for themselves in twenty-five years by the economy of management effected and by the accumulation of the difference between the 7 or 8 per cent which these corporations expected to earn on their capital and the 4½ per cent asked by the Government. A cut in the rates for telephone service, announced by Mr. Burleson to become effective on January 21, provides a reduction of one-half of the day rate for service between 8.30 and 12 p. m. and one-fourth the day rate between midnight and 4.30 a. m. A station-to-station sys-

tem is established whereby the connection is made and the toll charged whether the particular person desired at the other end of wire replies or not. This rate for distances up to twenty-four miles is five cents for six miles; for longer distances, five cents for eight miles. The distance is to be computed by air line.

## The Embattled Farmers

A winter wheat crop larger by 80,000,000 bushels than any previous yield is expected this year as a result of the Government's appeal to the farmers for food to help win the war. A record acreage of over 49,000,000 was planted and even the weather achieved a record condition of 100 per cent perfect for eight important states. If similar conditions prevail thru the spring, 1919's wheat crop will go well over the billion bushel mark set in 1915. The increased wheat acreage this year, which in Illinois reached 225 per cent of the previous acreage, was stimulated by the Government's promise that the wheat should bring a guaranteed price of \$2.20 a bushel.

It is not only in wheat production that the fighting strength of American farms proved a worthy complement to the military valor of our troops. With man power greatly reduced, fertilizer scarce, new equipment almost unobtainable, the farmers of this country harvested 9,658,000 tons more of fifteen staple crops in 1918 than in 1914; in other words they increased our cultivated acreage for staple crops by more than twice the cultivated acreage of England, Scotland, Ireland and Wales.

It seems probable that for a considerable time the world will need food-stuffs from the United States and that it will be necessary for us to maintain increased production of grain and also of live stock. The Food Administration's request of a 15 per cent increase in pork production was met this year. The Department of Agriculture has achieved notable results in fighting animal diseases: 67,000 square miles in the southern states were freed from cattle-fever ticks; losses from hog cholera were reduced one-half.

Paul Thompson  
SOUVENIR!

Nearly every returning American soldier has a "souvenir" to remember Jerry by. This boy on the "Leviathan" has put on the helmet that a German "gave" him and is shouting his greeting to the home folk on the pier below.

## THE "LEVIATHAN" BRINGING BACK 9000 SOLDIERS AND SAILORS

When the biggest ship afloat, the German "Vaterland," was taken over by our Government, refitted, rechristened the "Leviathan" and put to carrying American troops across to defeat Germany, the U-boats made a special fight to sink her. But she defeated five distinct attacks and transported 150,000 men to France. Now she has made her first trip back to New York with homecoming troops. This photograph shows her fast outside her moorings at Hoboken.

# BEHIND THE BRITISH FLEET

BY HAMILTON HOLT

*This article concludes the series that Mr. Holt has written for The Independent every week since his trip to the battlefield and to the Allies' capitals. The story of his experiences over there includes a visit to the Seicheprey front just three weeks after our troops won their first victory there, a shot fired at the Germans from an American trench, a talk with the King of Italy and with the President of France, luncheon with General Pershing and many other incidents of interest and importance*

© Underwood & Underwood

*The Grand Fleet of England in the Firth of Forth*

IN my last week's article I described my several interviews with Admiral Sims, Commander of the American Fleet in European waters. This week I purpose to give some of my impressions of a five days' trip to the North, where the British Ministry of Information had arranged for Judge Wadhams and myself to see the Grand Fleet at the Firth of Forth, the Vickers munition factories at Sheffield and the Beardmore shipyards on the Clyde. Lieutenant Robertson of the British Army was assigned to us as guide and escort, and a right jolly traveling companion he turned out to be. He had been shell shocked at the front when a bursting shrapnel buried him under a ton of earth. He said the shock caused him partially to lose his memory for a few months, but now he had entirely recovered. I met many men in England who had suffered similarly. The malady is very common and takes all sorts of forms. I met, for instance, one young playwright, a contributor of *Punch*, who would cry like a baby when he became tired. His mind was not affected in the least and he could write his humorous quips as well as before the war. Another splendid fellow working in the British Ministry of information, with whom I came in frequent contact, would tremble and shake as tho he had the St. Vitus dance. Shell shock seems

to be an entirely new phenomenon, very much like a severe form of nervous prostration. Time and cheerful surroundings will generally cure it.

Our first stop after leaving London was Sheffield. There we spent the entire day in going thru the great Vickers munition plant, where the largest cannon in the world are made. The Vickers Company has been in business from the beginning of the eighteenth century. It was originally a private firm, the principal partner, Mr. George Naylor, being the grandfather of the late Colonel T. D. Vickers and of the present chairman, Mr. Albert Vickers. A generation ago the concern was turned into a limited liability company with a capital of £155,000, which has since been increased to over £9,000,000. Now the plant at Sheffield, to say nothing of the subsidiary plants situated in other parts of the kingdom, comprises over eighty acres and employs over 100,000 workmen. We saw guns being manufactured of all calibers, from small caliber anti aircraft artillery to the monsters used for battleships and land forts. Besides the manufacturing of guns Vickers produces armor engines, railway locomotives, railway carriages, drop stampings for motor cars, transport wagons, aeroplane engines, high

grade steel tubes for aeroplane parts, and carbon and alloy steels for cutting tools, and rolled steel bars. In the subsidiary plants are manufactured shrapnel, naval and merchant ships, marine engines, gun mountings, projectiles, airships, machine guns, cartridge cases and fuses, powder and ammunition motor cars and transport wagons. Mr. Ford's theory of specializing on one standard product and manufacturing it in quantity at the lowest cost is evidently not yet followed by British manufacturers. In England the Vickers methods everywhere seem to prevail. Each concern manufactures as many different products as it can and lays the emphasis on quality rather than on quantity.

This was especially the case at the great Beardmore shipbuilding plant on the Clyde. Not only does the Beardmore Company manufacture giant liners, battleships, freight ships, aeroplane ships, destroyers and submarines, but it turns out large numbers of dirigibles, aeroplanes, marine mines and artillery. Superficially the Vickers and Beardmore plants look very much alike to the casual visitor. Everywhere were to be seen giant blast furnaces, great machine shops, long casting rooms and assembly shops, and everywhere swarms

of working men with oily hands and grimy faces were hammering and fashioning and shoveling in the dingy light of the dark interiors. I saw thousands of English girls and women at work in their brown khaki trousers. Some of them were pouring molten metal into molds, others astride of iron bars were hammering rivets and still others were wheeling barrows or dirt and sand from one side of the yard to the other. All the small, low motor trucks that carried material from one part of the shop to another were operated by women. They all looked healthy and cheerful, but I could not help wondering whether they could stand such heavy work over a long period of time. The wages in these shops seemed to be high—certainly they were higher than the workers of England had ever received before. The employers told me, however, that they did not fare so well as in peace times, for their extra profits had to go back to the English Government in the form of excess profit taxes. The men at the head of these English concerns seemed older than the men in the United States conducting similar enterprises. I hardly talked to any one high in authority who was under sixty years of age. England is still an old man's country. A young Britisher has to emigrate to the colonies if he expects to rise to the top before middle age.

At the Beardmore factory I was especially interested in the rooms where the great dirigible balloons were being manufactured. In this division of the plant only women were employed. I was told that in the long established industries where men have done all the work women are not admitted by the trade unions, but that when a new trade is started, like the making of dirigibles, the trade unions make no objections if women are employed. In that case, however, they are unionized as soon as possible. I was privileged to walk thru some rooms where visitors are usually not admitted. I saw women cutting out the silken covers for the balloons. In one room they were pasting over the silk the lining of the inside of the stomachs of oxen. The atmosphere of the room was permeated with a sort of "dopy" smell which I was told is very dangerous to the health of the women workers if they do not frequently go out in the open air. Consequently every hour the women are sent out on a balcony for a quarter of an hour's rest.

I had always been desirous to see the interior of a submarine. As there was one of the largest and latest types of the craft tied to the dock we asked permission to visit it. When Lieu-

tenant Robertson vouched that Judge Wadhams and myself would not if we could, and probably could not if we would, make any improper use of what we saw, we were permitted to enter the mechanical shark. First we walked over a plank from the dock to the curved deck. On the top, just big enough for one thin man to slide thru, was an open hole. With some difficulty I dropt down about six feet and found myself in the entrails of the beast. The sur-

roundings were anything but inviting. In fact, I should about as lief have been Jonah in the whale's belly as to be a sailor in one of those under-sea boats. There was hardly a square foot in the entire length of the ship where it was possible to stand up straight. We had to crouch almost double as we walked. The entire inside of the carcass was lined with a veritable network of twisted pipes and wires. I could hardly move in any direction without running my head or arms or feet into machinery. Several times I had to crawl over live torpedoes and electric wires to go from one compartment to another. Some of the berths for the crew were actually on top of the large torpedoes and even the small periscope room used as the officers' quarters was hardly as commodious as an ordinary engineer's room in the bottom of a third class tugboat. The temperature near the engines was suffocating and the gaseous fumes and the odor of oil, grease and stagnant air that pervaded the entire ship was sickening. The smallest kitchenette would have been a palatial refectory compared with the submarine's galley. Imagine living for months in the bowels of such a monster without fresh air and without the power to stand up straight, and all the time overshadowed by the ever present possibility of a hideous death. No wonder that the Germans could get no more volunteers to man their submarines. And no wonder that the relief from the hell of submarine life caused most all the sailors that manned them to commit the wildest excesses when they were on shore.

Our next experi-

Photographs from Press Illustrating

English women riveters at work in the great shipbuilding plants on the Clyde

ence on this trip was our visit to the Grand Fleet. At Edinburgh Lieutenant Robertson, Judge Wadhams and myself were met by an officer of the Royal Navy who was to take us by train to a great blue bay where the fleet was riding at anchor. Having arrived at a little station on the banks of the Firth of Forth we walked down to the wharf and there, proudly riding the broad bosom of the expanse before us, was the Grand Fleet of England—the fleet that has undoubtedly saved civilization from the dominion of the Hun. There it was spread out before us—a thousand ships it almost seemed—from the great super-dreadnaughts and the powerful armed cruisers down to those sturdy little fox terrier destroyers that I came to love and admire so much on the voyage over. Darting in and out and all about were hundreds of tiny harbor craft, all flying the Union Jack. A gasoline launch was waiting for us and we stepped aboard. As we raced thru the center lane made by the lines of ships it was fine to see smoke rising from every stack and to realize that it was only necessary to weigh anchor for the whole fleet to be off for the battle. Down at

ers, giant dirigibles were always on the lookout for the forthcoming foe. I was proud to see the Stars and Stripes floating from the sterns of five battleships in this goodly company. The American Navy is now part and parcel of the British Navy, and to see our dreadnaughts shoulder to shoulder with their English brothers is but one of the many concrete evidences that from this time henceforth the English speaking nations are one in the defense of right.

We were first taken on board the "Neptune," where I was at once ushered into the presence of the captain and his officers. Such downright hospitality as these Britishers showed us I have seldom if ever received in my life. The jolly English tars took us to their hearts at once. Of course we were shown all over the ship and everything from top to bottom was explained to us. All the woodwork had been cleared away, the decks were stripped for action, and the one thing on earth or sea that our new found friends seemed to want more than aught else was a chance to get another crack at the Germans. The captain assured me that the American officers in command were

splendid fellows, and said that the English Navy had learned some things from the American Navy, as he believed that we had learned some things from them. At all events everything that each nation knew was at the disposal of the other. A delicious luncheon was served us—by all means the best meal I had in Great Britain—and after several toasts were drunk to the (Continued on page 428)

#### MARSHAL FOCH DICTATING THE SURRENDER

*In his special car Marshal Foch met the German envoys at Rethondes and read to them the Allies' conditions of peace. From left to right are Captain von Salow, General Winterfeldt, Herr Mathias Erzberger and Count von Oberndorff, representing Germany; Admiral Wemyss of Great Britain, Marshal Foch, an American representative probably General Rhodes, and General Weygand*

**B**UT—Master Hugh—the Master Hugh you kept things from—will never come back. . . . I mean that anyhow this Hugh will never come back. Another one may. But I shall have been outside and it will all be different.”

It was thus that Mr. Britling's boy said what we all know to be true. The boys who will come back from France, Belgium, Germany, Italy, Siberia—boys we used to hide things from—will not be the same boys who sailed from Hoboken and Newport News and San Francisco. Just how they will have been changed, we cannot yet tell. They must first return and stand among us, talk with us, try to fit themselves back into our social scheme, before we can begin to feel the difference.

But certain weather vanes have already shown how the wind is beginning to blow. Any one who has seen and even for a few weeks lived among our fellows overseas realizes that they have crashed thru a good many of the old barriers set up for them by traditional conventions. The free life in the open has given their natural spontaneity a chance to develop. They sing and play and joke and fling themselves generally over the landscape a great deal more than they ever could under the old conditions at home. This kind of thing means not only healthier bodies, but also healthier minds—minds full of sunlight in place of the darkness and cobwebs of the old days. Those who went out boys-afraid-of-themselves have, thru their experiences and associations with every sort of youth, lost most of their fear and gained a courage that will be permanent. The rougher element have come into contact with the more refined and better educated individuals, usually to their mutual advantage.

When this new vigor, courage and mental hunger sweep in upon us, we shall need to meet it on our toes. We ought not to let ourselves forget that the burden of readjustment will fall upon us, not upon the boys who come back. If we are wise we will welcome it and the responsibility that goes with it, because I have an idea that we shall be immensely stimulated by the experience.

What about the religion these fellows will bring back with them, for instance? From what I know of them, religion meant very little in their lives before they entered the army. They were Catholics, Protestants, Orthodox Jews, Presbyterians, Unitarians, etc., chiefly because their fathers and mothers were one or the other. Religion meant to most of them little more than church and charity, neither of which had any great appeal for their youth.

We have just recently seen, in the United War Work Campaign, the first united effort on such a large scale ever made by Jews, Catholics and Protestants, working together for a single object which was bigger than any single sect or group of sects. Perhaps we feel a bit of a thrill at this, if we are liberals, and are inclined to pat ourselves on the back and smile virtuous

smiles. But who was responsible for this united effort—the President or the Y. M. C. A., or the K. of C., or the Jewish Welfare Board? Not at all. The A. E. F. was responsible. Those boys over there like Jewish chocolate and Catholic chocolate and Methodist chocolate equally well. Any letter paper will do for a home letter. George M. Cohan's latest song sung by George himself has just as much swing on a K. of C. phonograph as upon a "Y" or a J. W. B. phonograph. The wounded soldier who needs a drink, or a lift, or even last rites, doesn't ask the ministering chaplain whether he preaches Christianity or Judaism. The religion of war—a religion of unselfishness, sympathy, help, brotherhood—is the kind of religion that *means* something. It is there when it is needed, and it needs no tags.

That is the real reason why there was only one campaign in November instead of seven.

Religion that has been tagged and covered with a thin coating of sugar in the form of a movie show or a vaudeville entertainment has been consistently repudiated by the A. E. F. I attended a performance like that in France early last summer: a good vaudeville show had just ended when a religious director leaped onto the stage before the boys could get out and started a prayer and praise meeting, apparently on the assumption that if religion wasn't stuffed down the boys' throats they wouldn't swallow it at all. It was a cheat, pure and simple, and of course the whole audience saw thru it. They were too courteous to get up and leave in a body, but they said some pretty hard things about it afterward. They declared that they hated to see religion cheapened like that. The religious director's psychology was all wrong. The average soldier is perfectly willing to attend a real religious meeting organized by what he calls an "honest-to-God-chaplain," but he refuses to be hoaxed into a prayer meeting when he expected something entirely different.

When our fellows come back, what kind of religion will we have to offer them here? Will it be the kind that really answers a need, offered by "honest-to-God-chaplains"? Or will they have to take religion into their own hands and make it genuine? These are questions which our churches must answer or risk being displaced by something bigger than themselves.

Until the signing of the armistice, most of our overseas forces had little

TRAINING CAMP ACTIVITIES

are bringing home new ideas, new vigor and new vision"

on for the promotion of social  
only departments and organ-  
institutions in Europe

tics have become intensified due to their contact with foreign peoples and that, as a result of their isolation from America and in their role of representatives of America, they have expressed certain obvious American national traits, he is right. But when he continues by saying, as a comfortable corollary, that "their adventuring into the European war furnace has not changed their American character. They can now go back to their various activities at home without being restless or discontented in their old tasks," I fail to share his pessimism. I hope rather that many of them will be both restless and discontented when they contemplate the return to their old tasks, and that some of their old tasks, and the conditions surrounding them may undergo some mighty changes at their hands.

And this is not at all the same as hoping that they will come home Bolsheviks. There is a difference between adopting even so loosely woven a political doctrine as bolshevism and deriving a stimulus from its expression. Uncle Sam is too good a business man to refuse contributions of new thought, and he is also too skilful a refiner not to be able to separate the gold from the dross.

The same correspondent concludes his analysis as follows: "I shall miss my guess if, on returning home, they do not constitute a permanent and potent influence for maintaining the American tradition of freedom from entangling alliances." This sounds again like reactionism, unless the writer means by entangling alliances only that sort defined by President Wilson as "special arrangements or understandings with particular nations." If he means that our soldiers will constitute a potent influence against the assumption by America of her "full share of responsibility for the maintenance of common covenants and understandings upon which peace must henceforth rest," then I believe they would be the first to repudiate his accusation.

Complacency with regard to the future political ideas of American citizen soldiers is a dangerous thing. There are many outworn traditions hiding in the deep and dark dugouts of our national thought which will be forced to cry "Kamerad" when these boys come back. Let us hope that some of the compensation for their heroic efforts, for the lives lost and for the billions spent will be measured in a healthy political and social revitalization.

One unhandsome thread of our social

fabric has already been singled out for drawing. Prostitution has for ages been considered a necessary adjunct of social and military life. Venereal disease, which is its natural corollary, and a greater menace to health and happiness than probably any other factor except poverty, has been endured as the inevitable price of social maladjustment. The war has provided the motive as well as the occasion for an epoch-making demonstration that these theories are pure fallacies, and our army has had the largest share in it. Prostitution has been repressed in the areas surrounding training camps in this country by vigorous law enforcement, and in France by military order. Venereal disease has been prevented by medical measures, education and the prevention of sex contacts. Military officials of both our own and foreign countries have been convinced of the soundness of these policies and our own army has given splendid evidence of its agreement.

But the work has been only begun. The repressive work was begun wrong-end-to because of military necessity—that is, instead of starting with social causes, which would have been much too slow a process, it was necessary to start with the police. But its results have proved that repression is possible and that prostitution, instead of being an integral factor of social and military life, is merely a parasitical growth.

From now on one of America's most definite responsibilities is to carry on this work. In the first place, will the soldier who returns to find flourishing in his own home town the very things he has been taught to avoid and abhor not be justified in branding the citizens of that town as both hypocrites and slackers? Could we face them when they begin to realize that all the work done during the war had been aborted merely because the fighting had stopped? Finally, can we of this generation keep faith with our children if we do not carry this work on for their protection?

America has pointed the way to the world in this matter. Patriotism, pride, social necessity and humanity demand that we make good.

There are of course many other large problems incident to the return and readjustment of our soldiers, but these three are enough to illustrate my point. America has of necessity during the past year and a half borrowed some of the methods of autocracy in order to fight and conquer autocracy. These methods and the trend of thought they have produced have tended to crystallize and solidify temporarily our national intentions. But if we are to remain a democracy and develop as a democracy, we must return to a condition of intellectual and social flexibility, and at no time again, perhaps for generations, will open-mindedness and receptivity have such value for us as during this period of readjustment when nearly four million of our finest youth are returning, both from the training camps here and from the battle front abroad, bringing new ideas, new vigor and new vision.

# THE LITTLE CHRIST

BY HARRIET FAIRCHILD BLODGETT

The little Christ is coming down  
Across the fields of snow;  
The pine trees greet Him where they stand,  
The willows bend to kiss His hand,  
The mountain laurel is ablush  
In hidden nooks; the wind, ahush  
And tiptoe, lest the violets wake  
Before their time for His sweet sake;  
The stars, down dropping, form a crown  
Upon the waiting hills below—  
The little Christ is coming down  
Across the fields of snow.

The little Christ is coming down  
Across the city streets;  
The wind blows coldly from the north,  
His dimpled hands are stretching forth,  
And no one knows—and no one cares,  
The priests are busy with their prayers,  
The jostling crowd hastes on apace,  
And no one sees the pleading face,  
None hears the cry as thru the town  
He wanders with His small cold feet—  
The little Christ is coming down  
Across the city street.

The little Christ is coming down  
Where Flanders' fields are red.  
The cannons roar, the bugles blare,  
The sabers flash His coming there,  
And, as the banners wave and toss,  
They shape themselves into a Cross.

While thru the whirling flakes of snow  
The little Christ stoops low, stoops low,  
He makes of laurel leaves a crown  
To grace the dying and the dead—  
The little Christ is coming down  
Where Flanders' fields are red.

The little Christ is coming down  
Across the burning sands.  
As lilies, fair and cool and sweet,  
The footprints of His dimpled feet,  
As violets of Paradise  
The loving pity of His eyes—  
And all the souls He calls by name  
Go flashing upward as a flame,  
Beyond the shadows, murk and brown,  
While on the battlefield He stands—  
The little Christ is coming down  
Across the burning sands.

The little Christ is coming down  
To greet His Own tonight.  
Not as a hero with a sword,  
Not as a thorn-crowned Prince and Lord,  
But just a Little Child He comes,  
(Hark to the sobbing of the drums!  
And all the reeking air astir  
With scent of frankincense and myrrh!)  
While, tenderly, He kisseth down  
The lids on eyes too dim for light.  
The little Christ is coming down  
To greet His Own tonight.

## THE FAILURE OF THE FOURTH ESTATE

**T**HE press of the United States, thru no fault of its one thousand Washington correspondents, is falling down.

The Constitution of the United States provided that "Congress shall make no law abridging freedom of speech or of the press," but it did not provide for the safety and security of the press, against acts by agencies, of the Government and of private or public organizations, other than Congress. It said, by implication, what is patent upon the least consideration, that the integrity and freedom of the means of communicating intelligence, so that the people of this nation can exercise their will and conscience intelligently, is essential to the welfare of the nation; it did not, could not, a century ago, set up thoroughgoing means to the maintenance of the integrity and freedom of the press. But it is becoming more and more imperative that some such means be employed. The proof lies in many national defeats, two of which are sufficient to demonstrate, past doubt, that we shall do well to look closely at a menace which may thwart national expression in this country as fatefully as it did in Germany. These two are the coal closure and the aircraft crisis, neither of which disasters, in its relation to the public thru the press, is, generally, in the least understood.

There was no real scarcity of coal,

BY DONALD WILHELM

as was pointed out first by this magazine, when the coal closure came as a rending shock to the nation last year. There was no scarcity of coal, but there was an arrant and criminal and unpatriotic scarcity of light on the conditions of the railroads charged with the responsibility of transporting that coal. This scarcity of light was due directly to press agents used as a kind of camouflage corps by a small group of railroad executives who were making a desperate fight to keep the railroads from being taken over by the Government. Conditions on the roads got worse and worse; the very elements conspired against them; until, at last, too late to avert the costly coal closure, the Garfield order came and more than 150 ships whose cargoes were imperatively needed by the Allies were freed. Then the President stepped in, forced action, got the roads taken over. He was able intelligently to do that, not because, in those fateful hours when he should have had the utmost coöperation from the press, the press informed him that the roads must be taken over, but in spite of the failure of the press to do any such thing.

The press agents who, unwittingly, no doubt, thwarted the will of the nation in the case of the coal closure,

tho used much by corporations and individuals outside Government control, got their start in the Government itself. The earliest considerable press agency of which there is any record available was that established by Gifford Pinchot, in the Roosevelt Administration, to carry out the work of forest conservation. Mr. Pinchot was a pioneer Dollar-a-Year man who had learned, somehow—perhaps from Colonel Roosevelt—the tremendous power of publicity, with the result that he established a publicity bureau which, when perfected, proved to be an exemplar. The organization chart and charter of that bureau, which the writer studied, amply demonstrated how perfect a machine it was, one achieving such good results that other Departments and Bureaus followed suit, establishing bureaus of publicity, some of which, like that of the Department of Agriculture, were really desirable. In many cases "special agents" were designated, or the press agent was an "assistant," or an accountant, or a clerk. Congress did not give general cognizance to any such program in its appropriations. Perhaps Congressmen and Senators would have felt, in a test, sympathetic, because nearly every one of them relies, at least to some extent, upon the advice and guidance of a favored news- [Continued on page 448]

THE perspective that divides a child from its father is very long. Intimacy is possible, but mutual understanding is difficult until the child passes beyond the imaginative stage, that elusive period which each one forgets after it has been left behind. When the two become chums, that is, have like pleasures, like ideals, like mental stimulants, then there is no mathematics in their love, and the question of the greater or less age or dignity or importance has disappeared before a beautiful camaraderie.

About the first memory of my father was his lying beside me on the floor, patiently repeating over and over again, verse by verse, Gray's "Elegy," until I could lisp it to the end. I was then three years old.

His theory was that a small child could as easily be trained to noble poetry as to baby doggerel, without tiring or injuring the growing brain. So on my seventh birthday, according to the Ward tradition, my father took me in his arms before he went to the office, and said:

"My little son. Seven is a sacred number. This is your seventh birthday. I am going to make you a present. It is this. When I come home tonight, I want you to repeat to me the whole Hebrew alphabet. Here is the grammar, and I know you will not make a mistake."

In this way I began to study Hebrew, a language almost perfect in its regal simplicity, and, in a short time, it proved not more difficult than the complex mother tongue.

My father was what might be called a Spartan Puritan. Blessed with a primitive constitution, ignorant of headaches, hardly ever suffering pain, ancestral in his simple tastes, it took him many years to understand that his son could be differently constituted from him. While he was teaching in Ripon College, I remember toddling along with him to his classes and back. Those were moments of animal joy to the lonely child of four or five—running, jumping, playing tricks, throwing snowballs, and cutting up like a kitten. He played, too. He was never on his dignity with his boy, except when he punished. On one occasion I slipped and fell, and finding I could not rise, began to howl miserably. My father, who could not abide a cryer or a coward, spoke sharply:

"Stop crying! Get right up or I'll whip you!" Again the child tried to move, but failed. He could only squirm a little out of his tracks; but one leg refused obedience. Just as my father was about to make his threat good, his myopic eyes caught sight of a red pool beneath my left leg. He snatched me up in his arms and ran like a deer to the house, laid me on the sofa, and with the tenderness of a modern nurse, bound up the jagged wound on the knee cap, that a sharp stone had made as I fell. In his own life he practised his favorite motto, to "endure hardness as a good soldier of Jesus Christ." But when it came to his boy's suffering, the apostle-physician could not have been gentler than he.

# MY FATHER

BY HERBERT D. WARD

*In this Seventieth Anniversary Number of The Independent it is our privilege to publish the sketch of Dr. William Hayes Ward written by his son. Dr. Ward molded the editorial policies of The Independent for nearly fifty years, from 1868 when he became Associate Editor until his death on August 23, 1916. Ten years ago, in our Sixtieth Anniversary Number, he wrote: "Nothing is so near my heart as that The Independent shall always remain true to the Kingdom of Christ whatever banner his loving followers may carry; that it may be more than hospitable to new truth, and that it may seek to bring the Church into closer bonds of union; that it may always defend the wronged and the helpless of whatever race, that it may assert the widest fellowship of humanity, and that it may ever, in the matters of national progress as well as of all righteousness, forget the traditions behind and build new service on the eternal foundations of faith, hope and love, which are also those of liberty, fraternity and equality." That is the creed we still follow*

*William Hayes Ward*

From experience I know that every strong character who has any children at all, should have at least two or three. The first to practise on, the rest to train according to his experience and their temperaments. My father was born a scholar, he was trained to erudition. From his father he inherited a certain madness for early education. It did not occur to him until later that the early home training, the moral example of a Christian family, are more necessary than a dozen languages. He wanted me to have the advantages he lacked, the natural induction into French and German. As a child of my age at the time, he had a scholarly father, a prayerful and a tender mother, four adoring brothers and sisters, a Christian and ecclesiastical home with all the Hebrew he wanted thrown in—but alas, no French or German. In his Oriental studies he missed these languages terribly, and overcame this lack only after years of studious difficulty. Naturally he argued: "I have begotten a son who will be a scholar and an Orientalist like myself. He shall not be handicapped. I will pump languages into him which he will absorb as easily as a babe does milk." So a little past my seventh year he sent me over to a Moravian School in the Black Forest alone. That was my

German. Then after a few years to another school in Switzerland. That was my French. And the dear father, the near chum, the playfellow and mind-comrade grew dimmer and dimmer, and was almost lost to memory. So was home, family, his country, and protecting love became a vanished dream.

For our minds, our bodies, our constitutions, our ideals, our ambitions were as different as if we had never been related, and it was only several years after my return to my father's house, when mutual confidence was difficult to resume, when misunderstandings were frequent, and boyish distrust was predominant, that he discovered that he had fathered a different breed from a Spartan Puritan, and that scholarly erudition was very liable to die out in the family with him. Then his whole treatment underwent a change. When he began to expect less, he began to love more, and in the summer of my sixteenth year the bond of fellowship was riveted anew between us, that strengthened as time flew on, and was never broken, not even by death itself.

At that time, in 1877, the four of us—my father, my two aunts and myself, were living in the Stone House on Abington Avenue, Newark, New Jersey. My father had built this rather pretentious house and occupied it as his first own home. My mother was always too great an invalid to assume any care whatever over home, husband or child, and had died while I was in school in Germany. So the boy of sixteen had no mother's oversight, and after school was over had nothing but his daily chores, meals, and bedtime to curb his impetuous nature. Father came home about dinner-time, tired, and often not before midnight, leaving a little after eight

each morning. His editorial duties on the New York Independent kept him chained to desk and train routine. His missionary and religious committees, ever increasing in numbers and importance, took all the rest of his time. His only chance to pursue his Oriental studies, to achieve and write his monumental work on Babylonian Seals and Cylinders, to write his innumerable scholarly essays for general publications and societies, was to steal the time out of his sleep between five and seven in the morning. I do not ever remember of waking up early that I did not see the light burning at his desk in the bedroom. During these quiet hours he became the Dean of Babylonian scholars in this country. It was then he acquired his French, his German, his Syriac, his Arabic, made exhaustive Hebrew translations, and forged a reputation for accurate scholarship that made him the honored president of the American Oriental Society.

The boy had little understanding of these matters. He loved to play, and so he joined "The Clan." This aggregation of boy dynamite was composed of about ten members of the same ages living within a mile of the Stone House. We were in every innocent mischief conceivable, and the pace was rapidly getting faster. We even got so far

as to play pool and call for an occasional sherry flip. Then we knew we were men of the world. We often played cards, having parties in each others' houses, when the families were out. I remember organizing a raid with them on our own grapes and eating them in my attic bedroom with trembling gusto.

It was a fine lot of boys, just drifting undirected. One evening late the majority of the clan were up in my room playing poker with lump sugar for chips. Sugar was cheaper than celluloid then. My father was not expected home until midnight, and the party would be all over long before then. But as a blind in case of accident, we had a chessboard loaded with men, ready to concentrate on, when the stairs creaked.

One of the lads at the table was especially belligerent when he lost his host's sugar. In the midst of a scene and noise that would not be allowed in a respectable zoo, the door opened and in walked the master of the house. We were paralyzed. Cards were religiously taboo under his roof. He stayed and chatted pleasantly, with no reference to the unholy sport. One by one the boys shivered and grew pale and limp. They slunk down stairs and disappeared. I expected nothing less than a good whipping. I had often gotten it before. But this time punishment was not meted out. The offense must have been too serious even for that. After the dinner was over the next evening, and we were sitting around the big table as usual, my father spoke up.

"Berty, I want you to go up in the attic and bring down my old botany can."

Wondering, I went. It was a battered, dingy old can, and very heavy. I had already been taught how to press flowers, keep my own herbarium and analyze wild-flowers. The summer before I had analyzed and prest over a hundred varieties, but had never used the botany can. My father was sitting alone at the cleared dining-room table with a big brown covered book, into which he was diligently peering. He never wasted a moment's time. I was pretty well frightened and kept still. It was watchful waiting.

"Open the can," he ordered, "and take out what you find there, very carefully, and spread on the table."

Wondering, I opened the slide, thrust my fist in, and encountered a hard substance wrapt in old newspapers. Then another, and another. Soon each was uncovered, and there was spread upon the oak table a glittering array of crystals. Here a huge amethyst encrusted with drusy quartz. By its side a beautiful specimen of blue copper ore; a transparent crystal of quartz and other specimens wonderful to the eyes of the ignorant child. This was my first lesson in mineralogy, and the book was Dana's comprehensive work, which thumbed and marked and torn and battered—is now an honored member of my library today. In a few evenings the "clan" met and formed the first Mineralogical Club of Newark, and was immediately, under the guidance of my wise father, transformed from a gang of irresponsible boys into an ardent group of collectors. That summer we combed Bergen Hill for zeolites, the sandstone quarry for petrifications, and tramped as far as Paterson with our kits, as eager a lot of enthusiasts as you ever saw. The situation that was growing serious was saved by a wise direction of waste exuberance, and the poolroom knew us no more. Cards were henceforth taboo without any one's forbidding their use. A greater interest had taken their place.

This was the beginning of my father's converting all his vacations into mineral trips with his only son. This lasted until after my college days. Pennsylvania, New

*Photograph of Dr. Ward taken in the nineties, at the time of his mineralogical trips*

Jersey, New York State, and Nova Scotia even to Cape Blomidon, were subject to the many mineralogical adventures of the happy couple. There were many incidents of interest and of drama in these wonderful trips. For never a boy had a more congenial, an easier, a more companionable mentor and chum than I in these trips. One incident stands out in my memory that illustrates that great man's simplicity of nature as well as his inherent reverence.

In the northern part of New York State on a hot July evening a disreputable looking couple might have been seen tramping thru a small village. It was seven o'clock; they had walked fifteen miles already, and were hot and hungry. They had five miles farther to go before they could reach a hotel. Each carried a battered bag that was surprisingly heavy. Burglar's tools and mineral kits look alike under canvas covers. With reluctance the storekeeper sold them a loaf of bread and a huckleberry pie, and scowled as they ate sitting on his worn steps. Then they started shambling along.

At that moment a church bell dominated the still air.

"That's a Congregational Church," asserted the elder. "I recognize the tone of that bell."

"Nonsense. They are all Catholics or Presbyterians here," the boy replied.

"We haven't been inside of a Congregational Church for a month, and we are tired. Let's go and see. You can sit outside if you want to."

Sure enough, it was a Congregational prayer meeting night, and we entered and slunk in to the back seat. The congregation consisted of the leader, one man and thirty women beside the tramps. Heads were turned, skirts rustled, noses lifted in our direction. After waiting for those whom they never expected to come, the meeting opened with a hymn.

"Sing!" commanded my father, "as you never did before." The boy's tenor easily dominated the little meeting to the disgust of the leader, who sang a cracked alto. A tramp sing songs of the sanctuary! The supprest excitement due to this invasion of sacred territory grew. The leader opened the subject, which, appropriately enough, was the total depravity of man. He illustrated this aptly from the fall of Adam, and sank down. The remaining man of respectability took it up and carried it to the present day, putting especial emphasis on hoboism, which in summer time were evidently a curse to this God-fearing commun-

ity. Then he quit, and after another hymn there was an ominous silence. If no woman spoke, the meeting would die a natural death.

But at this critical point a sister arose, evidently the pastor's wife, a woman confident in her powers, and used to publicity. She prayed for those who lost in Adam had stumbled into the sanctuary. She reviewed their lurid past, their drunken wanderings, their probable crimes. She asked forgiveness for their enormous offenses. She discarded all pride in her own unassailable position, and called upon the tattered strangers to confess their sins while the spirit moved them. The leader appropriately ordered "The Ninety and Nine" to be sung while the sparse congregation turned again and stared at us as if we were men of Borneo.

"I'm going to speak," whispered my father, "and then let's run for it when I'm thru."

The hymn of repentance stopped. The tramp arose. His gray hair was tousled, his beard scraggly. He had on a flannel shirt, not too clean, and a long linen duster stained with a month's hard travel. But he arose, tall, with a kind of irresistible dignity that calmed an audience aghast over the prospect of a too harrowing confession of sin. The man began quietly in his usual conversational tones. His voice was melodious and his words marvelously chosen. He began by telling them that he had been a Congregationalist for seven generations, and he himself a member of the church for forty years. He told them of the mercies of God, of the beauty of a life of holiness. His tones grew deeper, more commanding when he spoke of the sacrifice and true humility that marks the man of God. He rebuked them for their ecclesiastical self-sufficiency and summoned them for their narrow, gossiping lives. He eulogized them for their support of a poor church. He evoked the blessing of God upon their homes, their labors and families, and called upon them to pray with their hearts rather than their lips.

With one accord the people bowed their heads. For neither they, nor the mischievous lad ever heard such a speech or had listened to such a prayer. Hearts beat wildly within bosoms as if Pentecost were at hand. In the hush that followed, the two strangers disappeared from the church. Their suspicious mineral bags went with them. When the last outpost of the village had been left behind, in the darkling of the summer night, the boy timidly took his father's hand. The Spartan was affectionate but not over demonstrative. The boy was both. He was very much moved.

"Father," he said, "I never heard you talk and pray so wonderfully. I didn't think you could."

The man, known to all the Congregationalists of the country and to the scholars of the world, answered:

"I had to. I couldn't help it with such a narrow little audience. It was an inspiration. Now," he smiled a little sinfully, "they'll have something to wonder about."

After that I always understood the eloquence of Christ in the face of bigotry, opposition, misunderstanding and hatred.

I could write reams about the delightful adventures my big brother and I had on these mineral trips, how we were almost trapped to death in Pennsylvania, drowned in Nova Scotia, imprisoned in New York State, robbed and almost murdered in an iron mine, and how my father disappeared in a blast in a zinc mine in New Jersey. Those are blessed memories of a perfect camaraderie, etched on the retina of my heart. Every day was a joy, for we were pursuing a hobby under the ideal conditions of love, health, simplicity, hard work.

and besides, for my part, I had added an unconscious infiltration of knowledge and the philosophy of life that was invaluable. For as we tramped, without my knowing it my father taught me; and when we dug our specimens, it was with an enthusiasm that wore us each night to a dreamless sleep. Blest is the son who can ride so healthful a hobby in the full company of his father!

Unconscious education! Much of it was very conscious and somewhat humiliating. This strange duckling of a son to the near-sighted man of midnight oil and sunrise light must have been quite a prayerful problem. But one thing was preëminently taught and even whipped in. Duty must be done. He was a stern practitioner of this precept. One of my household duties was to draw for the meals the fresh water at the well. One summer evening I accepted a supper invitation to a neighbor's house and forgot all about the sparkling well water. There were two attractive girls in the family, of about my age, before whom I wished to stand well, besides the boys, one of whom was my intimate friend. While at supper the doorbell rang, and the boy of the house opened the front door. There stood my father.

"Is my son here?" he asked grimly. I went out. "You forgot to draw the water. Go right home and do it!"

"But, father! What's the difference. Won't you do it for me this time?"

Then the lady of the house came out and added her gracious pleading for her careless guest. But my father shook his head. "My boy must do his duty, and after that he can come back and have a good time."

Ashamed, too humiliated to cry, hating my father, I ran the three blocks home and drew the cold water from the cold well. But that draught of water has never been forgotten. The shame, the humiliation, the temporary anger with the Puritan parent soon were wiped off the slate of youth. They were only smooches. But the stern lesson of duty to be done when it should be has survived forty years.

In my father's library were many books. I stood in awe before the huge Hebrew and Assyrian tomes, in awe of the books, but not of the languages. For very often I was called upon to translate inverted German and cryptic French. Why do commentators use such blind words for erudite subjects? It must be to camouflage their real ignorance. On the most abstruse subjects my father always thought clearly and wrote simply. He was never ashamed to acknowledge the limitations of this knowledge, altho he was known as the "office encyclopedia"; nevertheless, he always insisted that every man's goal should be omniscience. Browsing on Plutarch; dipping into the old English dramatists and Shakespeare; made to read Milton and know Lycidas by heart; trained into the heavily balanced sentences of the early essayists, and nodding myself to sleep over Lamb, Hazlitt and Bacon. I was nevertheless eager for a lighter and more lurid goal.

Almost the most conspicuous object in our sitting room was a huge armed rocking chair, heavily upholstered

and very soft. Where the back and seat met there was a deep place into which I often thrust my hand to discover stray treasures, and in which I often hid articles safer to me to be unseen. In this patriarchal chair my father rested at night. Often as a child he had taken me in his arms and rocked me in that chair, and whispered to me curious things. In it I used to curl and read, and therein sometimes hide exciting literature. And in that chair my father always sat while conducting morning prayers. And what strange and moving prayers! My father and one aunt translated from the Hebrew. Another aunt from the German; and by paternal direction, I used the French, the Latin, the Greek, the Hebrew Bibles as my studies progressed. Prayers were a spiritual training in languages, and we had many discussions regarding the different interpretations, always settled by my father's possession of the Hebrew Old Testament, or mine of the Greek New.

On this occasion, when my father had finished his prayer, he arose to his feet with a most lurid sheet in his hand. It was some boys' cheap weekly, and I think there was madly riding in it at the time one of Jack Harkaway's gripping serials. The outside page had an appropriate picture in which murder was a minor matter. Spreading this interloper out in his hand so that its vulgar indecencies could easily be seen, he glared at his younger sister.

"Hetta, I am surprized at your hiding such a thing as this!"

"But William!" most indignantly, "I never saw it before."

Turning to the elder sister:

"Susan, confess!"

"I wouldn't touch it with the tongs."

In the meanwhile the son was squirming in his chair. Then the editor turned to his aged stepmother, a woman of God, if there

ever was one, who walked the narrow path of unexperimental rectitude.

"Mother!" his voice was raised accusingly. "Then it is you who has brought *this* literature into my house."

The old lady had little imagination and no sense of humor. With great dignity she arose from her chair.

"William! How dare you insult your mother in this fashion?" She swept from the room.

Then my father's gaze turned slowly to me. He crumpled the offending sheets in his hands and threw them into the open fire. His face relaxed and lit with a proud smile.

"I don't have to ask you!" he said, "for I know that *my* son *could* not read anything so vile as this."

That was the last vulgar periodical the lad bought or read. For months his ears rang with that gentle, cutting rebuke. That episode did as much to stimulate me to good reading as the example of the ever studious family itself.

Once a week, at least, my father brought out from the office a big bag full of new books that had been reviewed. Most of these I read. There is nothing better than such indiscriminate reading—travel, biography, science, literature, art—even religion—for giving a growing child an eclectic passion for all kinds of knowledge. I was rapidly becoming educated, but didn't *know* anything.

At the end of his seventeenth year the boy was graduated from a private school and an oration was imposed upon him. It was a boys' school, and instead of white tulle and blue ribbons, we had clean shirts and preposterous bouquets. Mine was a wonderful confection of huge white peonies with blue forget-me-nots. But the oration was the thing, and I made up my mind to dazzle the whole outfit completely. Naturally the whole family was interested in their boy's first public appearance. When the time was growing short and the choice of subjects could no longer be put off, my father took a hand in the game.

"What are you going to orate about, my son?" he asked, after dinner. When he said "my son," I always pricked up my ears. Like a rising author I hemmed and hawed and looked conscious. After insisting upon his knowing, I finally, with ill-concealed pride, gave him the subject of my choice—"The Effect of Phidias Upon the Art of the World!" One of the recent adventures into the family was a fat volume upon Greek art in the time of Pericles. This had been duly devoured. My father assumed his favorite gesture of intense concentration. He poked his thick lenses closer to his myopic eyes with his forefinger and fixed me with an admiring gaze.

"Splendid. Wonderful!" he said. "What do you know about it?"

"I read so and so and so and so"—my voice grew less confident.

"That's fine, but what do you know?"

"As much as anybody else," I flared.

"Very true, possibly more. But have you read—" he named a dozen standard volumes of which my new book was a popular gleam of sheet lightning. "Have you stud-

Dr. and Mrs. Ward and their only son, the author of this article

## NOW READY

Two books that every church officer should own

### A Manual for Ruling Elders and Other Church Officers

Revised Edition, including the Acts of General Assembly 1918

BY

WILLIAM HENRY ROBERTS, D.D., LL.D.

The Stated Clerk of the General Assembly

Cloth, 489 pages

\$1.25 net, postpaid

Containing the Laws and usages of the Presbyterian Church in the U. S. A. in relation to Ruling Elders and other Church Officers, Church Sessions, Churches and Congregations, with Introductory Matter, Notes, Suggestions and Appendix.

### Constitution of the Presbyterian Church

Edition of 1918

Cloth, 560 pages

75 cents net, postpaid

CONTAINING THE

Confession of Faith

Larger and Shorter Catechisms

Form of Government

Book of Discipline

Directory for Worship of God

Ratified and adopted by the Synod of New York and Philadelphia in 1788 and amended up to and including the year 1918.

ALSO INCLUDING

The General Rules for Judicatories and the Acts of the General Assembly.

### The Presbyterian Board of Publication (The Westminster Press)

Headquarters; PHILADELPHIA, Witherspoon Building  
New York, 156 Fifth Ave. Nashville, 711 Church St.  
Chicago, 125 N. Wabash Ave. St. Louis, 411 N. Tenth St.  
Cincinnati, 420 Elm St. San Francisco, 278 Post St.  
Pittsburgh, Granite Bldg., Sixth Ave. and Wood St.

### When the Boys Come Home

Every organization and school should display a new SERVICE Flag or Banner in their honor. Prices below include large star with one, two or three numerals.

#### Bunting Flags

3x5 ft., \$7.00  
4x6 ft., 9.00  
5x8 ft., 11.00  
6x10 ft., 13.00  
8x12 ft., 18.00  
10x15 ft., 24.00

Small gold stars, to represent casualties, 10c each—sewed on.

#### Silk Banners

1½x2 ft., \$7.50  
2 x3 ft., 12.50  
2½x4 ft., 15.00  
3 x5 ft., 20.00  
4 x6 ft., 30.00

ied these? Have you collected them? Have you purged the true from the false? Have you digested them as well as skimmed?"

I had nothing to say.

"Do you want your oration to be nothing but a series of cribbed ideas put into your own language, if you are honest that far?"

I had nothing to say.

"Does it occur to you that your subject, to do it even scant justice, might mean a life's study?"

I had nothing to say. I was sweating.

"Now what do you know?"

In despair I raked my mind. For a boy I had read voluminously, but I knew nothing thoroly. This and that flashed before me. But no use. I knew that before his pitiless logic my pretensions would be smashed.

"Don't you know anything?" Then a great light flashed upon me.

"Yes!" I burst forth. "I do know something. I know how to take care of a furnace."

"Then why don't you write about it?" came the quick ripost.

That was a triumphant oration. It was my first real lesson in writing and speaking. Only thru the thoro knowledge of his subject can the highest, clearest expression be obtained. Blind writing—blind speaking, is blind thinking. That simple, basic prerequisite condition of literary and forensic success was my father's chief asset of power. He never attempted to write of or speak of anything he did not know and know thoroly. And as he was a voluminous writer and a frequent speaker, he had to study all of the time. As I grow old and older, that lesson looms large and larger in my mortal life.

It was most natural that my father should have sent me to take the senior year at the Andover Academy. Twenty years before he had spent studious months in the theological part of the institution, under Professors Park, Shedd, and other stars in the theological firmament. He held much to educational tradition as he did to sound heredity.

It was also to be expected that my father should instill into me the love for Amherst College. It was his father's Alma Mater. He had been graduated there in '56. His youngest brother died there at the end of his senior year after a most brilliant college career. His other brother was graduated there also with high honors. Amherst was a family institution, and my father was later one of its trustees. So the old college on the beautiful hill took the young lad in. On that bright autumn day, the first act on bringing me to town was to lead me to the top of the college chapel tower and show me that sumptuous panorama of lovely New England scenery. I never could discover whether he loved Hebrew or nature more; whether he delighted more in the flower and the fern than in the cuneiform characters or the Hittite hieroglyphs. His time was about evenly divided between them. But in his son's heart he began early to instill a deep love of God's trees and flowers and minerals. For eight years after entering Andover I was only home vacations, and after that only for brief, infrequent visits. These vacations were always illuminated by some task set. In each summer we had at least one mineral trip until my marriage. One of these tasks was in the form of a bet. While my father had absolutely no sense of music or tune, he had a trained and enthusiastic knowledge of rhythm. The world has lost a work on prosody that he planned, but could not execute. But he trained me by the hour in Latin and Greek scansion. It was great fun to take Virgil and scan those rolling lines with orotund declamation.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

W. A. WILBE COMPANY

156 Madison Street, Boston, Mass.  
Head-Office Building, Chicago

"Why don't they translate Virgil into English in hexameter verse?" I exclaimed one hot July morning.

"Why don't you do it?" he countered.

So he wagered me a mineral trip to Nova Scotia that I could not translate the first six books of Virgil in six weeks in vernacular hexameter. It might have been a clever device to keep his son out of mischief, but the feat was accomplished on time, and the bet was duly paid in wonderful apophyllites and analcites from the overhanging cliffs of Blomidon.

It is interesting how a college course tends to wipe out the superiority of the father in the conceited eyes of the son. But this loss is replaced by the big brother, especially if father and son are members of the same college fraternity. But when the bills are to be settled, it is the father, not the big brother, who pays them.

My father always descended upon me in college without the slightest warning. He never knew when he was to be called East, and telegrams were alien to his training and pocketbook. On one such occasion my room was filled with boys and blinding with smoke. He blew in like a gale of wind, sniffed the tobacco, made a wry face, and after the introductions, rather ostentatiously opened the window. The boys faded away and I was left alone with him, fingering a proud sophomore pipe, with all the courage I could summon. I wanted to play the independent man, but the job was hard before ascetic austerity I knew my father possessed. In matters of self-indulgence he was an ascetic. He never indulged himself in anything except books. His traveling bag had always more books than toilet articles. From his childhood up he had never eaten butter, or drunken tea or coffee. He never touched intoxicating liquors of any kind. He never allowed them or cards in the house, and he had never smoked but once in his life—in 1856, during class-day exercises.

I remember with how great dignity he answered Dean Farrar, of England, when he visited our house, and asked for whiskey or beer in the natural English fashion. The erudite prelate was quite abashed for a few moments, for having made an anti-puritanical demand. But that next morning I caught my father blacking the Archdeacon's boots, which the visitor had left outside of his door as if it were a large country house or a hotel. That was father.

"My son," he began, when the room was cleared. I threw my pipe carelessly one side. "I am a poor man, in debt, and giving up much to pay for your education. I can afford to scrimp for that—but I cannot afford to go without so that you can smoke. When you earn your own tobacco I shall have nothing to say. Until then I expect you to do the fair thing."

He didn't scold or threaten, as some fathers might. As he always did, he appealed to reason. We shook hands on it. If possible, I loved him the more for treating me like an intelligent being. Nor did I smoke again until I began to earn my living ten days after graduation.

It is probable that our family represents one of the oldest and the longest series of clergymen in direct line in this country. So it was most natural that my father should plead with me that the line be not unbroken. The study of Hebrew laid a strong foundation for this career, that did not strongly appeal to me. I wanted to be a surgeon or a teacher. Finally, after much argument we compromised. I agreed to study theology on condition that after the three years' special course was over I could do as I pleased. It was during that time that I wrote the Sunday school lessons and Biblical Research columns for The Independent, thus relieving my father of so

# How Scientists Clean Their Teeth

*All Statements Approved by High Dental Authorities*

**The facts stated here have been widely known for some years among dentists and scientific men. But they were not presented to the public until proved beyond dispute.**

People who know—by the hundreds of thousands—are changing their teeth-cleaning methods. And these are the reasons:

The old methods proved inadequate. The best-brushed teeth too often discolored and decayed. Despite the wide use of the tooth brush, statistics show that tooth troubles have constantly increased.

Science found the reason in a slimy film. You can feel it with your tongue. It is constantly forming, and it clings. It gets into crevices, hardens and stays.

That film is the cause of most tooth troubles, and the old methods could not end it.

That film-coat absorbs stains, and the

teeth seem discolored. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Also of many other serious diseases.

It is therefore best to brush teeth in ways which can end the film.

Four years ago a way was found to combat that film efficiently. It has now been proved by thousands of tests. Today it is embodied in a dentifrice called Pepsodent, and we ask you to test it yourself.

## Make This One-Week Test

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

This is not as simple as it seems. Pepsin must be activated, and the usual method is an acid, harmful to the teeth. So pepsin long seemed barred.

It is now made possible, because science found a harmless, activating method. Five governments have already granted patents. That method is employed in Pepsodent.

Many teeth-cleaning methods, widely proclaimed, have later been found inefficient. So Pepsodent was submitted to repeated clinical tests, under able authorities, before this announcement.

Today it is proved beyond question. And the object now is to bring it quickly into universal use.

The method is to offer all a One-Week tube for test. Send the Free

coupon for it. Use it like any tooth paste, and watch results.

Note how clean the teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

Let Pepsodent thus prove itself by a One-Week Test. See its unique results, know the reason for them. After that, you will not be content to return to old methods of teeth-cleaning.

Cut out the coupon now.

## METROPOLITAN HOSPITAL TRAINING SCHOOL FOR NURSES

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a two and one-half years course of training. Each pupil nurse receives an allowance of from \$10 to \$15 a month in addition to maintenance and uniforms.

Minimum age 18 years. Requirements, at least one year of high school or equivalent. Classes are formed each month.

Blackwell's Island is an historic spot. It is removed from the rush and noise of the city, yet so near New York as to be part of it. The palatial nurses' home, with its extensive and attractive grounds, is an ideal place to live in.

As a war measure, the course has been reduced from three years to two years and six months. Every young woman who enters a training school for nursing to-day renders a patriotic service by releasing a pair of trained hands for service "Over There."

For Information write to MISS AGNES S. WARD, Superintendent

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

**LOCATION:** 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

**WORK:** Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

**ATHLETICS:** Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

U. S. DEPT. OF LABOR

much extra work. The first was drudgery. The last was fun, for no one knew but my father that a theologian was writing the scholarly and critical department that was supposed to be edited by a scholar of high degree. This fact amused and pleased my father immensely. At times he was quite proud. He was more so when, during the first two years, I compiled a novel Hebrew grammar.

After two years in Union Seminary I went, under his advice, to Andover for my last year. This was repeating his life. To him, at that time, the ministry, especially the missionary ministry, was the highest expression of human value. Teaching came next; and after that his own editorial profession. He was born into the ministry; taught science; was a home missionary, and finally landed in the editorial chair, of what was then a religious weekly. Under Henry C. Bowen, the New York Independent was religious. Under my father's editorship, it was a national religious institution.

It was in Andover that I met my first wife, Elizabeth Stuart Phelps. This fact shattered all my father's hopes for his future for me. Gone was the ministry. Gone was teaching. For I could not take a woman of national reputation as a writer—the most fascinating conversationalist—the most brilliant mind I had ever known—seventeen years older than myself, and immature her in some little country village. At least I thought I couldn't. My father accepted the defeat of all his life's hopes for his only son, and the dynastic knowledge that his family would come to an end with me, with a spirit of sweetness and generosity that could not be surpassed.

Indeed, that tolerance of the other person's opinion was one of his fine characteristics. Abrupt in speech, seemingly beligerent in argument, sure of his own position, he was nevertheless courteously sympathetic, if not yielding to the other side. Possibly that marked trait made him such a judicious and impartial presiding officer. I think that I know of only one instance when he lacked tact in a public position. That was during the Beecher-Tilton trial. There his indignation carried his tongue with it.

When I first knew my father, he seemed to the ignorant child narrow and somewhat intolerant in religious matters and observances. I remember, as a boy, getting a good whipping for playing croquet on a Sunday. But that was part of my rigid bringing up as a Puritan. As he grew older, he increased in religious and theological breadth. How could he help it? No student of Ur of the Chaldees could be different. No expert on ferns could be different. No one, to whom omniscience was a creed, could be different. One morning he utterly surprised me by saying that the Red Sox were at the top of the American League. He had never seen a baseball game in his life, nor a sporting contest of any variety, but he was just as much interested in scientific brawn as he was in scientific clarity. Backgammon was his favorite game, but chess he taught me as a lad, and he always regretted that he was too near-sighted to play billiards. Any game, based on science fascinated him. He was a spiritual sport.

His great book, "What I Believe and Why," written at the age of eighty, illustrates a profound mind, balanced by exact science and governed by trained reason. In missionary matters, in church matters, he was a practical idealist. But when he sat down to write, whether an editorial, a sermon, a lecture, or an Oriental monograph, he was the exact scientist, the unerring scholar, with reason as a guide and interpreter. It was natural that he should deplore heresy trials. For after all theology is man's conception of the deity, and not

God's illumination of himself. So theology, like chemistry, is reborn every generation, and the heretic of one is apt to become the spiritual leader of the next.

I have not space to enlarge on my father's breadth of erudition. I use the term breadth, not depth. All knowledge was his meat and drink. And as he was as modest and unpretentious as he was learned, he made an ideal companion. I even liked to hear him preach, which is the highest tribute a son can pay his father. Once in Woodstock, he picked a lily on the way to church, and analyzing it before his audience, he preached the simplest and the best sermon I ever heard. There might have been fifty persons present. One interested soul was his opportunity.

It was a horse, born in the eclipse, that anteposed his end. A year before he died he was thrown out of a wagon, and fell upon his spine. It was only his clean constitution that permitted him to survive as long as he did, paralyzed, but mentally as crystal as ever until within two days of his death. When he left Newark with his family of two sisters, his only regret was that he had not rounded out a full fifty years as editor of *The Independent*, his long service there, making him, with the exception of Mr. Alden, of *Harper's Magazine*, the oldest editor in point of uninterrupted work in New York. But South Berwick was an ideal place in which to end a busy life, and the old family mansion, the best spot to garden and to write. There, surrounded by his great Babylonian, theological and sociological library, he ended life in the way he would have chosen.

My father had an obsession that was born with him, lived with him, and pursued him until his last conscious moments—his love for Milton. As a boy, he made me learn *Lycidas* by heart, the greatest poem in the English language, he alleged. Gradually he amassed a Miltonian library with many first and rare editions and glossaries. Milton's essay on "Education" was his standard in that department. Every Christmas he read after morning prayers the "Hymn of the Nativity." I can hear him intone it now. He knew almost all of "Paradise Lost" by heart, and could repeat "L'Allegro" and "Il Penseroso" and other poems with never ceasing delight. He was the only critic I ever knew who could explain all the cryptic allusions in "Lycidas."

During the last days I read to him regularly, and it was always Milton. It was my delight to play a little game with him. Purposely I would misread a word or substitute another. Many times I read those divine passages in the four great poems, and never once did he fail to stop, question my accuracy or correct my carefully planned mistakes. He was never at fault as to the true reading of his favorite poet.

Never a murmur, never an impatience, tender toward his loving sisters, thoughtful of his nurse, with a smile and a feeble pressure of his hand to his son. A gentleman of God—a scholar of Christ—an editor, who made true religion his lamp—an erudite who linked his knowledge to humanity—the active friend of the negro, the Indian, the soul in darkness and of all expect men, the assembler of churches and creed—the lover of his home and the best father in all the world.

At eight o'clock on the evening of August 23 the nurse called us. My two aunts and myself stood above his bed. His breath was coming softer and slower. "The Lord Is My Shepherd," we repeated, watching our dying loved one. "And I shall dwell in the House of the Lord forever": with that benediction, the soul of William Hayes Ward passed out of the body into the keeping of Christ, whose disciple he had always been.

## McCutcheon's January Linen and White Goods Sale

From January 2d to 31st

Reg. Trade Mark

**I**N some respects this is the most important Linen and White Goods Sale we have ever held.

By concentrating on the task of watching the Linen markets of the world during the four critical years just past, and knowing when and where to buy, we are this January in a position to offer our Patrons a large range of Household Linens of regular McCutcheon Quality at prices as low as, and in some cases lower than, they were a year ago, and this notwithstanding the marked increase in cost during the past year.

Mainly the prices on these goods are below even present-day wholesale prices.

In our judgment Linen prices cannot change much for the better for two years, and we therefore strongly urge our patrons to purchase, during this January sale, such Linens as they need or are likely to need for themselves or for gift purposes during the coming year.

In imported Lingerie, now so difficult to obtain, we are able to offer an especially fine selection of the choicest French, Madeira and Philippine handwork at prices which are remarkably reasonable. We are also showing a beautiful line of lingerie of domestic manufacture.

We are very proud of the collection of Children's Garments which we are offering for our January Sale. Our Children's Department is steadily growing in favor with those who are seeking Children's Wear of reliable quality and approved style.

*A copy of our January Linen and White Goods  
Sale Catalogue will be mailed on request.*

# THE WAR IS OVER—NOW FOR BUSINESS!

**N**EVER in our economic history have we faced the problems which we now have to solve and which are the

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

BY LUIGI CRISCUOLO

gium will be in an altogether different situation. Italy became a great industrial nation during the war and demon-

strated her ability to produce vast amounts of munitions when she was given sufficient raw material. Belgium was important industrially but it will take her some time to restore her plants. The other countries will require millions of dollars of manufactured products. All of these countries have debts which can be reduced by taxation but they also have external credits which can only be reduced by the export of gold or goods. At this writing, credits granted by the United States to her allies amount to \$8,220,340,702, interest upon which at four per cent amounts to nearly \$329,000,000 yearly. As we have been dealing so much in billions these figures may not mean much to the layman, but to me they are actually staggering.

We were not prepared for this war. In some ways we will find ourselves not prepared for peace. Peace will not result in economic success unless our foremost men, leaders in statesmanship, finance, industry and economics, are ready to cast aside the traditions which have narrowed many of them down to a localized form of activity, and look at commerce as an international and not as a national problem. That we were not a nation unto ourselves became evident when, with all the efforts which were made to keep us out of the war, we finally had to get in it. For, while we had to consider the humanitarian element we also began to feel the economic effects of the war in Europe.

There are many problems to be solved which are now being studied carefully by the Government as well as by large banking institutions, chambers of commerce, commercial firms and societies for the advancement of economic thought. The parties interested directly in the result of these studies are represented by: Capital, Labor and the Public.

This is not merely a problem as between capital and labor, capital on one hand wondering whether it should continue manufacturing, and labor trying to figure out whether it should demand more pay and shorter hours or better working conditions. It is a problem in which the public in general is vitally interested and is not afraid to have it known. This public is beginning to feel that neither capital nor labor should be permitted to commit acts of aggression or tyranny which might affect the well-being of millions of individuals, just as the people of the world are trying to prevent any group of autocrats from sending them to the battlefields to be massacred because of some small pretext, without their consent.

Capital and labor serve a most worthy and useful purpose in the general scheme of industrial development, and under the present system neither could succeed without the other. The capitalists have not all of the wealth, they merely control it. The wealth of the country is in railroads, factories, mines, farms, public utilities, etc., and these properties are owned by millions of individuals either thru ownership of securities, direct ownership of real estate, thru deposits in savings banks or by ownership of insurance policies. There was a time when capital was openly autocratic and adopted an attitude of total indifference to public opinion whether labor was concerned or the general public. This has changed with the times because capital realized that unless a people are happy they bring about social unrest and revolutions in which property either becomes entirely unproductive or is confiscated or totally destroyed. Conditions in Russia are a potent example.

In the face of war and destruction capital realizes that individual wealth and comfort are entirely dispensed with. The war has been a great leveller, a destroyer

of social precedence, and it is hoped that it will create a more harmonious feeling between the useful capitalist and his industrial manager on one hand and the worker and the general public on the other.

It was only thru intelligent and unselfish coöperation that this country accomplished such great industrial and financial feats which contributed so much toward victory. Why should not the same sort of spirit continue to exist now that we have before us the problem of bringing our in-

*There's going to be enough for everybody*

*Darling in New York Tribune*

*Unless somebody tries to grab more than his share, and spills it all*

dustries back to a peace basis, and now that we shall be obliged to compete with European labor and commerce? It is not to be denied that with the decline in the urgent demand for war material there will result a downward trend in commodity prices. And, in consequence, there will be a downward trend in the wages of war workers who have commanded twice the amount of wages they received in normal times. This is obvious, but it is hoped that the decline in commodity prices and wages will be orderly and that wages will not decline first, or social unrest will be a certain result.

How this readjustment can be made with as little possible disturbance to the financial and industrial world is the problem of the day. Production should be kept up because European nations are not in as flourishing condition as we are and will experience difficulty and delay in financing their requirements. Countries like France and England with highly developed industries will experience the necessity of a transition from female to male labor without great difficulty. Their financial problems will be stupendous, but both countries have led the world in finance before the war and there is no doubt that England will remember this and use every effort to retain her financial supremacy. However, this need not prevent American bankers from assuming a position of financial leadership provided they are capable and they receive the support of the Government. We have the resources, but have we the experience and ability to finance the world?

Italy, Greece, Rumania, Serbia and Bel-

gium will be in an altogether different situation. Italy became a great industrial nation during the war and demon-

strated her ability to produce vast amounts of munitions when she was given sufficient raw material. Belgium was important industrially but it will take her some time to restore her plants. The other countries will require millions of dollars of manufactured products. All of these countries have debts which can be reduced by taxation but they also have external credits which can only be reduced by the export of gold or goods. At this writing, credits granted by the United States to her allies amount to \$8,220,340,702, interest upon which at four per cent amounts to nearly \$329,000,000 yearly. As we have been dealing so much in billions these figures may not mean much to the layman, but to me they are actually staggering.

European nations will make superhuman efforts to produce and produce so as to pay their external debts and the interest upon the same. What they will do with their internal debt, no one can surmise now, but it may be that taxation will gradually reduce that. At any rate every man, woman and child will be utilized in the production of goods for export.

We have practically no foreign debt to liquidate but we have an internal debt exceeding seventeen billions, with the prospect of another loan next spring in the amount of five billions. Aside from this, a recent statement sets forth that direct Federal taxation for next year will be at the rate of over fifty dollars a year for every person in the country! This is no small figure when it is considered that before the war we had no idea that income taxes would reach such magnitude. For us, this means that we should keep on producing corn, wheat, potatoes, steel, copper, farm implements, etc.

The slogan "business as usual" was used during the war. Prominent bankers claimed that people should be thrifty and buy only necessities while other voices were heard to the effect that even luxuries should be purchased because such purchases kept money in circulation and provided employment for many thousands of people. But, the argument was advanced that if instead of producing luxuries the workers could produce munitions, the war would end sooner. Now, if our manufacturers go on producing luxuries and European peoples keep on the same road, will we buy such products from Europe or will Europe buy them from us? It seems to me that the best we can expect Europe to buy of us is raw material, farm implements, machinery, etc., so that her industries can produce goods to be exported here to liquidate her debt to us. Perhaps we can afford to buy luxuries but Europe cannot. So there is no little problem for us to solve, and I believe that we must continue producing essential products for home consumption and export and practise thrift as we were advised to during the war.

Excessive production will not only result in the lowering of the cost of living but it will reduce wages to the level of normal times. The cost of production lowered, there will be additional incentive for private capital to expand its scope and create a demand for goods at low prices, which will result in keeping labor occupied. After all, if the wage adjustment downward be drastic to comply with economic needs, the law of supply and demand will soon put labor and commodity prices on a plane of equality. The immediate problem

is to see that no derangement is caused either by unreasonable capitalists or labor leaders. Only intelligent Government supervision can succeed in doing this.

The transition from war to peace with respect to capital, labor and reconstruction could take place, of course, by means of a radical readjustment. We could have wholesale discharges of laboring men, followed by labor troubles, strikes, a business depression. But this would result in economic loss not only to capitalists and laboring men but to the general public. I doubt that we are going to find much sympathy in an enlightened country for Bolshevik ideals, and the Government can well afford to take an interest in the problems without being accused of being paternalistic.

The transition from war to peace will result in a continued demand for capital for reconstruction purposes as well as for the ordinary current needs of industry. With the war ended, it is to be doubted that the public will respond generously to any appeal for subscriptions to 4½ per cent Government bonds. There is no sensible argument as to why any one should buy 4½ or 4½ per cent bonds, which are not tax free, when sound corporation bonds are selling at prices returning from 5½ to 7½ per cent.

Only patriotism has prompted the American public to purchase new issues of Liberty Bonds when the old issues were selling at a discount. While the Government has recognized this fact in the past and has thus been able to keep down the interest rate, it must now recognize the fact that the war is over and that municipal bonds which are absolutely tax-free can be purchased at prices to yield at high as 4½ per cent and better. It seems to me that this is an argument for an interest rate of at least 4½ per cent for the next Government loan.

In view of the great demand for capital which is bound to ensue in the next six months, I cannot foresee any appreciable advance in bond prices. With current corporation financing being done on as high as a 7½ per cent basis there does not seem to be much of an argument for an advance in bond prices until the successful solution of the reconstruction problem can be safely discounted. The best purchases for permanent investment are long term railroad bonds of the large systems which at present prices yield in the neighborhood of six per cent. old issues of industrial bonds, preferred stocks issued before the war began. Bonds of public utility companies doing business in large cities should be purchased particularly as the public is beginning to realize that the five cent fare cannot stay at the present high cost of material and wages. Even with a drop in wages and commodity prices, the five cent fare is out of proportion to the service rendered.

The course of railroad stocks will depend very largely upon how much money the Government will actually require the railroads to spend upon their properties and whether the companies can sell securities to provide for these improvements. This is not a time to be pessimistic but it is assuredly a time for our statesmen and industrial leaders to be concerned about the economic future of the country. With the change drifting to the Republican side at Washington there is some likelihood of the abolition of radical legislation. If the Government control of railroads and wire systems should be terminated in the next year, there is no doubt that the North will come into its own again and that business men can expect prosperous times tempered with more consideration of labor by capital as an outcome of the war.

## BEHIND THE BRITISH FLEET

(Continued from page 426)

good days coming we said goodby, stepped into our launch and then visited the "Queen Elizabeth," one of the largest and most powerful superdreadnaughts in the world, the very boat that gained undying fame at Gallipoli and the battle of Jutland. We could see the proud scars where she had been hit by German shells. We then said goodby to our hosts and as we wound our way to the dock thru the maze of battle-ships I realized again how safe the seas are under Britannia's naval rule.

## THE FAILURE OF THE FOURTH ESTATE

(Continued from page 432)

paperman, as, indeed, the White House relies upon them all when it wishes to ascertain the opinion of the country on any act or appointment about to be made, by putting out intimations and watching results. The Government and its many agencies thus lopped off—and this is the important point—a certain area that rightfully belonged to the reporters.

Many private corporations took heed. It was natural for them to do so, in the first place because, as their units became larger and larger, the work of publicity had to be centralized and controlled by one agency. And it was natural, in the second place, as a means of self defense in the days when muckraking was the order of the day and in the ensuing days when the Sherman Anti-Trust Law was trying to halt organizations that were or might be, for want of other legislation, about to run amuck. Hence we had another area of the reporters' field lopped off and more of them called to serve special interests. This tendency has been steadily going on, in some instances with the result that one publicity agent has been able to centralize the publicity of many corporations, in one organization of his own.

With this background in mind one can understand better the facts now about to be given for the first time about aircraft propaganda and aircraft blundering and delay.

In June, 1917, it will be remembered, there came the cry for aeroplanes. Aeroplanes, thousands of them! "It may be, in solemn truth," it was said in an article in this magazine, "that the war will have to be won in the air." This same article quoted, accurately, one of the members of the Aircraft Board, as saying:

We can get under way at once. If there is one thing we Americans stand for, it is quantity. For Americans, when the designing and engineering work is done, output is easy. And this output will be swift and sure. We can get out forty thousand engines, twenty thousand planes, before spring. Give us the money and we can get that many by spring and increase the output steadily, but we can't do that if we don't start till months from now. We must start now. . . . But we haven't the money!

The Aircraft Board did not have the money. Sentiment had to be made for getting it. So the country was appealed to, thru the Fourth Estate. In short order, so readily did the spectacle of the American "Eagle" winning the war appeal to American imagination, Congressmen and Senators were fighting to have the honor of introducing bills that were no doubt as much favored universally as any bills in the history of Congress. In short order the appropriation bills providing the unprecedented sum of \$640,000,000 were passed, and others followed.

The point to be noted here is that the Fourth Estate made this appeal when it

had been formally appealed to. It aroused with almost automatic surety the imagination of the entire country, in the space of a very few weeks. How the Fourth Estate was thus united does not much matter. The simple point is that about sixty of the foremost magazine and newspaper publishers of the United States were told, by technical and executive men from the foreign missions and from the Aircraft Board, that the program was practicable, that they had a chance and a duty to do their bit, that, indeed, they, alone, could achieve the miracle. "Winning the war," they were told, "is up to you."

Forthwith the Fourth Estate did its bit. It accepted, as patriotic men would do, the presumption that if the appropriation were provided, victory would follow. It established that presumption thruout the land. That presumption existed continuously—until the whole aircraft problem seemed to crash to earth like a house of cards and investigations and readjustments had to follow—all of which meant such delay that American aviators, in quantity, with planes in plenty, lost their chance "to win the war."

There has never been such a clean-cut incontrovertible exhibition of the power of the Fourth Estate. It did in a trice an unheard-of thing that would have won, or hastened the winning of the war, if others concerned did their part as it did its part.

"Then," the question at once arises, "why was it that the Fourth Estate permitted the failure of the aircraft program?"

The answer is that the Fourth Estate met, whenever, wherever, it turned to inspect that program, the damning German and undemocratic sign, *Verboten*.

The reporters of the Committee on Public Information were little better off than the other one thousand reporters working in one way or another with the press in Washington. It was patent that with a wartime program as vital as that of the aircraft program, and as hurried, it would not have been practicable for one thousand reporters to be turned loose in it. And the reporters of the committee had to take what was given to them—they had to take what the officials in charge of the program handed to them, which matter they wrote to best advantage, had corrected and revised by said officials, gave, in the form of mimeographed copies, from a common clearing house, to the press. It is patent that this method was neither unprecedented nor wholly undesirable. All this has, since this article was written, been proved by the Hughes investigation. In a word, in Governmental affairs—the people's affairs—as in its relation to private corporations and private individual affairs, the Fourth Estate has been and is reduced to the plight of a kind of court of intermediate concourse, with what results we see and probably will continue to see until the freedom of the press is restored or until the Government or special interests take it over entirely, or until some other decisive change is wrought.

There are other results of this manifold encroachment upon the prerogatives of the press, which come rather easily because reporters are an easy-going impersonal group, the best ethics and traditions of journalism intend them to be impersonal. That is, they learn from their earliest experiences that they are reporters, prophets who tell, as the word should be translated, or prophets who foretell. The first lesson the reporter learns is "When you think you've written something clever, kill it!" and he is never thru learning the futility of taking sides, because he is never thru drawing struggles between sides. That way, on one hand, one must look with

## Peace Questionnaire for January Investors

**I**N this time of peace and readjustment, the prudent investor will be particularly careful to buy only the safest and soundest securities—those which can pass the acid tests experience has developed and which always can be depended upon to determine the soundness of any investment. Particularly is this true of securities yielding an abnormally high interest return.

We have prepared an invaluable piece of investment literature in the form of a questionnaire, which should be in the library of every investor. Among the tests in this questionnaire are the following:

1. How close is the investment to the property on which it is based? Is it a first mortgage, a junior lien, an unsecured promise to pay, or a share in ownership?
2. What is the nature of the property behind the investment and is its value ample for safety during all periods and conditions?
3. Is the issuing corporation dealing in a necessary commodity or service, indispensable to the public at all times?
4. Are its earnings increasing so as to keep pace with the high cost of material and labor?
5. Are the bonds or notes steadily paid off in cash, year by year, out of the earnings of the company, or must they be refunded when they mature by contracting new debts?
6. Is the purpose of the issue to increase the earnings of the borrowing corporation, or merely for re-funding purposes?

If the investor applies these tests to the securities offered him, he realizes why it is exceedingly difficult to get more than 6% on his funds with real safety—the safety demanded by trustees, executors, institutions, and the most prudent class of individual purchasers.

The first mortgage serial bonds, safeguarded under the *Straus Plan*, meet these fundamental tests. Their thirty-seven year record of prompt payment without a loss during war and peace conditions, indicates their soundness. They yield full 6%. Write today for our booklet, "Questionnaire for Investors," and our current offerings of high grade first mortgage 6% bonds. Ask for

## The Value of a Surety Bond

The bonding business of the present day is on a uniformly firm basis of financial strength.

At the same time, it is obvious that the most desirable Surety Bond is that of the company whose reputation for prompt payment of just claims is universally recognized.

In both ability and willingness to meet just claims promptly, the American Surety Co. has thoroughly earned the confidence and good will of the business world.

10 South LaSalle St., Chicago, Ill.

regret upon a tendency of late becoming more and more apparent—that of turning the news columns of papers to selfish ends—and, on the other hand, continue to cling to our respect for newspapermen as a group. Their mental integrity is their pride, and a result of this is that their united judgment is better, it is frequently said by Washington officials, than that of any group of men whatever. They are scientists, not lyricists; they are cogs in a great and wonderful machine, not individuals who have special ideas to champion or to oppose. This character of trained reporters makes them careless of the limitations being placed upon the vital function that they perform.

There are many signs, only a few of which have been described here, that we are in a lull in which much of the Fourth Estate is groping. The radical press, which is certain to rise with new might, since the war is over, is, for the nonce, smashed down under cover by both private interests and Government interests. On one hand many private interests steadily are encroaching upon the field of the Fourth Estate. On the other hand, as part of the governmental control of various industries, such as the railroad and the telegraph, the Government has been, and is, doing likewise. Special interests, by various means, are extending their control or possession of more and more daily, weekly and monthly publications—necessarily—if put to the test they say—in self defense, which is something that any one who knows their point of view can easily appreciate.

But now comes peace! And tho the Government, during the war, "got behind" the power of the entire Fourth Estate by adding to the *Official Bulletin*, its daily, a weekly newspaper, by utilizing also means of conveying information that have heretofore been neglected, that is, by sending out 10,000 Four-Minute Men to address audiences in motion picture theaters, by using the motion pictures, too, by printing and distributing pamphlets and books and using other means of reaching the people of this country—soon it will have abandoned most of these media. The balance of power, then, will fall to the remaining Most Powerful. The emergency, and the battle between sides, will be over, the powerful will have been stimulated, not weakened.

All this steady but sure alteration in the affairs of the Fourth Estate is of significance.

It may mean, conceivably, naught more than such a transition, such a unification of interests as is occurring all over the world, such, conceivably, as, looking backward, we shall anon rejoice at.

Nevertheless, it behooves us to note and to remember:

That this was a war for freedom.

That this war began in a "battle of the books," that it was begun by books, and won by books, and will have its full fruits reaped by books; that long before troops marched athwart the freedom of little estates, words, in orderly array, marched first—the children with the sword.

Washington, D. C.

Magistrate—You certainly committed this burglary in a remarkably ingenious way; in fact, with quite exceptional cunning.

Prisoner—Now, yer Honor, no flattery, if you please; if there's one thing I 'ates, it's flattery.—*Tit-Bits*.

We have been married ten years without an argument.

That's right. Let her have her own way. Don't argue.—*Boston Transcript*.

## A New Life Insurance Policy

affording unexcelled insurance service; a combination of low cost, high values, and a new and original total disability feature, providing in the event of total and permanent disablement from any cause:

1. Waiver of future premiums.
2. A monthly income to policyholders throughout life.
3. Payment to beneficiary of full sum at death of insured.

Full information may be obtained from

**The Penn Mutual Life Insurance Co.**  
Independence Square Philadelphia

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

### Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director

# GROUP INSURANCE STABILIZES LABOR

BY W. E. UNDERWOOD  
DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

JUDGED on the basis of net results to time and effort invested, the address made by Mr. Eugenius H. Outerbridge, president of the Pantasote Leather Company and a former president of the Chamber of Commerce of the State of New York, to the members of the Association of Life Insurance Presidents in annual convention at the Hotel Astor this month, was more effective than anything in that line of which I have been witness in many years.

Mr. Outerbridge discussed Group Insurance as an influence in promoting stability in labor aggregations. I think his occupancy of the rostrum did not exceed twenty minutes of time; but what he said, the information he gave to employers and employees, particularly the former, freighted them with unusual value. I say this as one who, in the course of thirty years at insurance conventions, has listened to hundreds—perhaps thousands—of addresses, most of them a waste of time.

I am impressed by an incidental fact in connection with the story which is really Mr. Outerbridge's address. Perhaps it would have evaded my mind but for this allusion which he made to his own business. He said: "In a factory making a product which had been a new creation,——" Pantasote is, I believe, a manufactured fabric, a substitute for leather in covering furniture and is perhaps employed for other purposes. All properly constituted persons appreciate the proverbial growing of two blades of grass where one grew before; but there is a feeling nothing short of fascination for the achievement which produces something of service and value that previously never existed. I don't know that Mr. Outerbridge is the inventor of pantasote but it is a creation, useful and beautiful and he is connected with it.

And now to carry this idea further, we identify Mr. Outerbridge as the first patron of another creation—Group Insurance. In referring to his presence as a speaker before the Association of Life Insurance Presidents, he said:

"I have been asked to speak on the topic of group insurance as an economic measure and of its effect in stabilizing labor.

"I assume that this honor has fallen to me because I am informed my company was the first employer in the United States to have a group of employees covered by life, health and accident insurance at the cost of the business and without charge to the men."

Altho it contradicts another I heard some years ago, this statement is plain, direct and unequivocal and is probably based on information furnished by the insurer, the Equitable Life Assurance Society. As preserving all the proprieties of business romance, it should please us to know that these two creations are so closely associated. Having identified the Equitable as the life insurance company which introduced the system of group insurance, it is also proper and just that I should not omit the name of the man in whose brain that system was evolved, Mr. William J. Graham, who since its adoption by the company has been the head of the department in which it has been continuously and successfully operated.

We will now return to what Mr. Outerbridge had to say respecting the value of group insurance in solving some of the economic problems in his business. His was

# THE UNITED STATES LIFE INSURANCE COMPANY

In the City of New York

Issues Guaranteed Contracts

JOHN P. MUNN, M. D.,  
PRESIDENT  
FINANCE COMMITTEE  
CLARENCE H. KELSEY  
President Title Guaratee and Trust Co.  
WILLIAM H. PORTER  
Banker  
EDWARD TOWNSEND  
President Importers and Traders National Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

a new product. It could command the services of no trained workers. The work required intelligence and special care; in some departments educated skill was essential. The manufacturers found their most serious difficulties to be "due to an unexplained restlessness and constant shifting of men." None of the usual labor troubles—strikes, complaints about working conditions or over pay—were experienced. Men were paid for sixty hours a week where but fifty-five were rendered; liberal Christmas bonuses, gradually increasing with workmen's tenure of service, were awarded. But, as Mr. Outerbridge continues:

"Notwithstanding these arrangements we experienced a change in the personnel of our force averaging about 35 per cent annually, due to no specific cause that we could discover except the restlessness of what we learned to call 'migratory labor.'"

"It was too expensive training 35 per cent of the force to have them leave just as they were becoming useful. New and untrained men meant a larger proportion of damaged product. The constant changes meant loss of production and loss of production meant increased overhead, and heavy overhead often means the difference between a profitable or a losing enterprise."

This baffling situation set Mr. Outerbridge to the task of studying the psychology of labor and he gradually convinced himself that the solution of the problem rested solely with employers. He states that enlightened self-interest requires that the labor question should be viewed as a human problem as much as an economic one; that the victories which labor will win thru unions or the law will never allay the unrest; and that industrial peace and contentment will come only when employers freely concede to laborers, as partners in every enterprise, an equitable share of the fruits proportionable to the contributions which labor makes.

"But it was also necessary," he added, "that labor should develop the steadiness of application, the interest and friendly confidence expected of a partner, to enable its contribution to be gaged and apportioned." Seeking for some reciprocal relation or feeling as the starting point of a real interest by employees, the effects of pension systems and other forms were studied without any encouraging results. "I concluded," said Mr. Outerbridge, "that we must reach the home life and the families of the men, believing that thru that influence a greater permanency in the employment could be secured."

At this point in his researches he was made acquainted with the plans the Equitable was considering thru which employees could be covered in groups against the hazards of death, sickness and accidents. He studied the plan carefully, the conviction growing in him that "for intrinsic value as compared to cost this was the very first step" toward the stabilization of labor and the strengthening of the relations between employers and employees for their mutual benefit and the improvement of business. The Pantasote Company finally adopted the system and became the first insured under a group policy. In the following extracts Mr. Outerbridge relates the sequel:

As many of the men were foreigners, a brief synopsis of the plan was placarded in several languages thruout the plant and Greek and Hungarian priests were asked to address the employees of their race in their native tongue, explaining the benefits and that it would cost the men nothing.

I sometimes wonder if that at first made them value it at nothing. We thought they had understood it but certainly for a while we saw no change in conditions.

Our first claim was an accident case of minor character—a young man was hurt, was in hospital for a week or so and then returned to work. When he opened his next pay envelope he found some money and a check—he asked the foreman

what it was, and was sent to the office to find out. On being told that it was his insurance when he was laid up, he was very indignant, declared angrily he had not agreed to insure and would never pay anything. Unable to pacify him, the secretary finally said, "Write your name on the back of that paper and I will give you thirty-seven dollars and fifty cents (\$37.50) for it." "What," he exclaimed excitedly. "You give me money for that insurance paper?" and then, when he had gathered up the bills, he rushed from the office shouting to the men in the yard, "See! the company gives me \$37.50 for having had my collar-bone broken, being hit by the pitcher playing baseball on Sunday."

Our next case was a married man with six children, who broke his leg on the ice by jumping over a high fence instead of going out the gate. The several hundred dollars paid him in lieu of wages, which he had otherwise lost, and in settling hospital and doctor's charges made him more than a convert, a missionary indeed for this new and previously unheard of insurance that came to his own and his family's aid in the time of need; and then when the benefits were once experienced the fact that as long as he remained in the employ it cost him nothing, magnified, rather than minimized the value he attached to it.

An occasional death claim occurred where larger sums accrued to next of kin, and by that time the men understood what this protection meant, and had talked enough about it to attract others to the plant seeking employment, and after a couple of years our labor turnover had decreased to about 15 per cent, while our production increased, and the proportion of seconds or inferior products showed a distinct reduction.

Group insurance, therefore, justified itself both in business results and in humane benefits, which the employee felt flowed from the particular business organization of which he formed a part and which he could accept without feeling himself an object of charity. Thus, it may indeed be said, is "Wisdom justified of her children."

Some of our employees could not have passed a medical examination for life insurance, and of those who could, many would not have had the forethought or thrift to do so.

A study of the death claims in the two groups with which I am connected as an employer developed the fact that 53 per cent had no other insurance whatsoever, and that 47 per cent had insurance averaging only about \$150 each. As our groups were relatively small, I have had this checked against the entire experience of the company carrying the insurance, and learn that these proportions represent a fair average. In fact it appears that about 40 per cent of all employees covered by group insurance have had no other protection.

Think of 40 per cent of the wage earners of this country living without life insurance or any form of protection for themselves or for those whom they support! Thus they carry the hazard of twin calamities, a complete financial collapse coincident with death.

Employers who have tried paying out of pocket to the needy families of workers dying in their service may spend as much as the premium costs for group insurance, but that will not produce the same effect upon their remaining workers that would come from the group plan of giving each employee a life and casualty certificate in a good company. The group plan is a gift to all alike and I am informed that some of the beneficiaries have actually framed these certificates and proudly hung them in their homes. These may be extreme cases of appreciation but they illustrate the human instinct which gives extra recognition to the employer whose insurance plan gives protection to all rather than merely the chance of a charity payment to the most needy. And it may be noted that there is vastly more self-respect in the process of collecting an insurance policy than there is in accepting the charitable gift of an employer—as the needy family is certain to feel.

The whole progress of legislation for workmen's compensation has been developed on the theory that the industry should pay for the training or damage that is caused in its operation.

Is it not only a step further that the industry should pay something to the surviving dependents at the death of the breadwinner, at least sufficient to maintain them until they can adjust themselves to such changed conditions; and if employers do not recognize and do this voluntarily, it is more than likely that ere long the state will compel them to do so by legislation and the merit and value of a voluntary act will be lost.

As one interested in economic, industrial and social progress, as a director in the Equitable Life Assurance Society, which first developed this business, and as an employer of labor I am convinced that group insurance, life, health and accident, given by the employer without medical examination and without cost to the beneficiary is sound business economics, also, like Shakespeare's description of the quality of Mercy:

"Blessed him that gives and him that takes."

1918

# Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has  
insured property to the value of....\$30,949,773,989.00  
Received premiums thereon to the extent of.....\$312,671,550.90  
Paid losses during that period.....\$152,928,388.68  
Issued certificates of profits to dealers...\$96,523,710.00  
Of which there have been re-  
deemed .....\$90,801,110.00  
Leaving outstanding at pres-  
ent time .....\$5,722,600.00  
Interest paid on certificates amounts to....\$24,494,668.95  
On December 31, 1917, the assets of the company amounted  
to .....\$18,041,890.25

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board,  
CORNELIUS ELDERT, President,  
WALTER WOOD PARSONS, Vice-President,  
CHARLES E. FAY, 2d Vice-President,  
WILLIAM D. WINTER, 3rd Vice-President.

G. STANTON FLOYD-JONES, Secretary.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH; LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**TO THE TEACHER:** Ask every pupil to read as much of *The Independent* as possible, and to prepare at home written answers to two or three questions. When you call upon a pupil in class ask the pupil to step to the front of the room, to lay the written answer on the teacher's desk, and to speak without notes, unless notes are specifically suggested by the question. Then call for one supporting opinion concerning the thought presented, and for one dissenting opinion. Close the discussion by a vote of the class, and an expression of your own opinion. Make the work spontaneous, spirited and original. Build up a vigorous Americanism founded on reliable information concerning present-day events, conditions and thought.

#### I. Our Seventieth Birthday.

1. Explain the origin and significance of the name "The Independent."
2. How does The Independent's belief in freedom of speech aid in making it a good publication for use in schools?
3. Explain why J. G. Whittier, Mrs. H. B. Stowe and William Lloyd Garrison would naturally have sympathized with The Independent.
4. Show in what way The Independent represents American ideals.
5. Name and explain some of the modern ideals for which The Independent stands.

#### II. My Father. By Herbert D. Ward.

(This delightful article is worthy to be called a modern classic. Every person who reads it will be better because he has read it. It is written in charming style; it is a study of the best American life; and its influence is vital.)

1. Show that Dr. Ward's ideals for The Independent are noble ideals for the American people.
2. In what respects was Dr. Ward an ideal father?
3. Explain Dr. Ward's methods of leading a boy to form good habits.
4. Why does the author speak of his father as "my big brother"?
5. Tell why you would have liked, or disliked, Dr. Ward as a school teacher.
6. What subjects did Dr. Ward believe best for school composition?
7. What rules for writing are indicated in this article?
8. Explain why Dr. Ward preferred games based on science.
9. In what respects is "Lycidas" "the greatest poem in the English language"?
10. Why do "L'Allegro" and "Il Penseroso" give "never ceasing delight"?
11. Read aloud Tennyson's "Crossing the Bar." What makes it a beautiful poem?
12. Prove that Dr. Ward was a tireless worker.
13. Tell an anecdote that shows Dr. Ward's sense of humor.
14. If Dr. Ward had spoken to your school what books would he have advised you to read?
15. What was Dr. Ward's attitude toward nature?
16. What methods does the author employ to make the article interesting?

#### III. Behind the British Fleet. By Hamilton Holt.

1. Discuss the respective values of the English emphasis on quality, and the American emphasis on quantity.
2. What advantages does England gain from being "an old man's country"?
3. What advantages does America gain from being "a young man's country"?
4. Write an account of an imaginary voyage in a submarine.
5. Explain how the English fleet "undoubtedly saved civilization."

#### IV. The Little Christ. By Harriet Fairchild Blodgett.

1. Show how the poem increases one's sympathy for the unfortunate.
2. What methods have been employed to make the poem delightful in effect?

#### V. The Story of the Week.

1. Give a talk summarizing the most important recent events in the United States.
2. Give a talk summarizing the most important recent events in Europe.
3. Explain what events in other parts of the world are of great interest to Americans.
4. Explain any cartoon in this week's issue.
5. Give a talk on "After the War Aviation."

#### VI. News Pictorial.

1. Write a story based on any one News-Pictorial page.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Problems of Reconstruction—"Common Sense in Demobilization," "The War Is Over—Now for Business!"

1. Discuss this statement: "There is no surplus of labor in the United States today or anywhere else in the civilized world."
2. Show how capital, labor and the public are all interested in the proper solution of the new problems of peace.
3. "The capitalists have not all the wealth, they merely control it." In what sense is this true? What is the economic and the social consequence of this fact?
4. What will be the causes of the predicted "downward trend of commodity prices"? What will be the result?
5. "We have practically no foreign debt to liquidate," etc. Was this true in 1914? How will the present condition affect our overseas trade?
6. How will the "continued demand for capital for reconstruction purposes" affect the interest rate in this country and abroad?

#### II. Freedom of the Press—"The Failure of the Fourth Estate."

1. What does the author mean by the "Fourth Estate"?
2. Summarize the proof offered for the statement: "The press of the United States . . . is falling down."
3. What is a "press agency"? How does it work?

#### III. Approaches to Peace—"President in Paris," "The President's Speeches," "The British Elections," "The New Poland."

1. " . . . President Wilson represents two invincible forces, the material force . . . and also the force which will sanctify peace." What effect will this have on the Peace Conference?
2. What ideas were uppermost in the mind of the President when he spoke in Paris on December 16?
3. Do the results of the British elections give any indication of the attitude of the people toward the problems of the Peace Conference?
4. Show how present conditions in Poland and the neighboring countries will complicate the problem of a permanent peace settlement.

#### IV. Efficient Democracy — "Democracy Must Be Civilized."

1. "Democracy is on trial." In what sense is this true?
2. Why have "the Entente Allies and the United States paid from two to five dollars for every unit of actual military achievement for which Germany paid one dollar"? What does this prove?
3. What have been the chief causes of the success of the American democracy thus far? What reforms are necessary if this democracy is to be a success in the future?
4. What is the meaning of the last sentence in the editorial?

#### V. Portugal in Revolution—"The Portuguese Problem," "Assassination of Portuguese President."

1. Write a brief sketch of the history of Portugal during the past century. What brought about the revolution of 1910?
2. Why has Portugal been in a state of continuous unrest during the past eight or nine years?
3. What relation has the Portuguese problem to the general European situation at this time?

#### VI. Chile and Peru—"The South American Crisis."

1. "The trouble goes back to the Peruvian-Chilean War of 1879-1884." What are the merits of both sides of this case?
2. Why is it probable that "German intrigue has been instrumental in causing the outbreak just now"?
3. Can you suggest a just settlement of the Peruvian-Chilean dispute?

#### VII. The Railroad Problem—"Who Is Going to Run the Railroads?"

1. Why does Mr. McAdoo advocate a five year period of government control?
2. "Congress . . . seems unwilling to impale itself on either horn of the dilemma" etc. What plans for handling the railroad problem does Congress propose?
3. Why are the shippers eager for the resumption of private control of the railroads?
